FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

MS-21

Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.

Analyte & Samples(s) Qualified:

Aroclor-1016
B351286-MS1, B351286-MSD1

Aroclor-1016 [2C]
B351286-MS1, B351286-MSD1

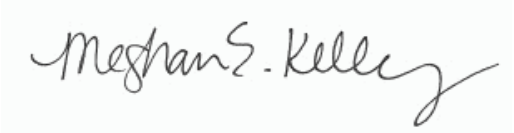
Aroclor-1260
B351286-MS1, B351286-MSD1

Aroclor-1260 [2C]
B351286-MS1, B351286-MSD1

S-01

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:



Decachlorobiphenyl
23H3261-04[P-184-EX], 23H3261-05[P-185-EX], 23H3261-06[P-186-EX], 23H3261-09[P-189-EX], B351286-MS1, B351286-MSD1

Decachlorobiphenyl [2C]
23H3261-04[P-184-EX], 23H3261-05[P-185-EX], 23H3261-06[P-186-EX], 23H3261-09[P-189-EX], B351286-MS1, B351286-MSD1

Tetrachloro-m-xylene
23H3261-04[P-184-EX], 23H3261-05[P-185-EX], 23H3261-06[P-186-EX], 23H3261-09[P-189-EX], B351286-MS1, B351286-MSD1

Tetrachloro-m-xylene [2C]
23H3261-04[P-184-EX], 23H3261-05[P-185-EX], 23H3261-06[P-186-EX], 23H3261-09[P-189-EX], B351286-MS1, B351286-MSD1

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
MS-21	Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

MS-21

Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.

Analyte & Samples(s) Qualified:

Aroclor-1016
B351347-MS1, B351347-MSD1

Aroclor-1016 [2C]
B351347-MS1, B351347-MSD1

Aroclor-1260
B351347-MS1, B351347-MSD1, B351490-MS1, B351490-MSD1

Aroclor-1260 [2C]
B351347-MS1, B351347-MSD1, B351490-MS1, B351490-MSD1

S-01

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:

Decachlorobiphenyl
23H3265-04[P-224-R23C], 23H3265-05[P-225-R13S], 23H3265-12[P-232-R13F], 23H3265-17[P-237-R33NB], B351347-MS1, B351347-MSD1, B351490-MS1, B351490-MSD1

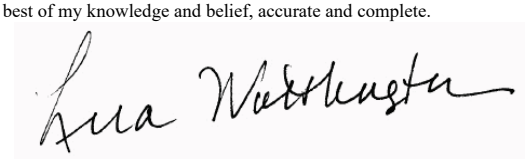
Decachlorobiphenyl [2C]
23H3265-04[P-224-R23C], 23H3265-05[P-225-R13S], 23H3265-12[P-232-R13F], 23H3265-17[P-237-R33NB], B351347-MS1, B351347-MSD1, B351490-MS1, B351490-MSD1

Tetrachloro-m-xylene
23H3265-04[P-224-R23C], 23H3265-05[P-225-R13S], 23H3265-12[P-232-R13F], 23H3265-17[P-237-R33NB], B351347-MS1, B351347-MSD1, B351490-MS1, B351490-MSD1

Tetrachloro-m-xylene [2C]
23H3265-04[P-224-R23C], 23H3265-05[P-225-R13S], 23H3265-12[P-232-R13F], 23H3265-17[P-237-R33NB], B351347-MS1, B351347-MSD1, B351490-MS1, B351490-MSD1

Z-01

The spike recovery for this MS/MSD is not available due to dilution below the spike reporting limit required from high analyte concentration and/or matrix interferences.



Analyte & Samples(s) Qualified:

Aroclor-1016
B351490-MS1, B351490-MSD1

Aroclor-1016 [2C]
B351490-MS1, B351490-MSD1

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
MS-21	Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.
Z-01	The spike recovery for this MS/MSD is not available due to dilution below the spike reporting limit required from high analyte concentration and/or matrix interferences.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

MS-21

Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.

Analyte & Samples(s) Qualified:

Aroclor-1016
B351287-MS1, B351287-MSD1, B351288-MS1, B351288-MSD1, B351289-MS1, B351289-MSD1

Aroclor-1016 [2C]
B351287-MS1, B351287-MSD1, B351288-MS1, B351288-MSD1, B351289-MS1, B351289-MSD1

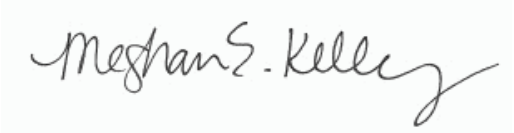
Aroclor-1260
B351287-MS1, B351287-MSD1, B351288-MS1, B351288-MSD1, B351289-MS1, B351289-MSD1

Aroclor-1260 [2C]
B351287-MS1, B351287-MSD1, B351288-MS1, B351288-MSD1, B351289-MS1, B351289-MSD1

S-01

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:



Decachlorobiphenyl
23H3267-05[P-245-R35S], 23H3267-06[P-246-R36C], 23H3267-20[P-260-R34E]

Decachlorobiphenyl [2C]
23H3267-05[P-245-R35S], 23H3267-06[P-246-R36C], 23H3267-20[P-260-R34E]

Tetrachloro-m-xylene
23H3267-05[P-245-R35S], 23H3267-06[P-246-R36C], 23H3267-20[P-260-R34E]

Tetrachloro-m-xylene [2C]
23H3267-05[P-245-R35S], 23H3267-06[P-246-R36C], 23H3267-20[P-260-R34E]

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Project Location: St. Johnsbury, VT | Sample Description: | Work Order: 23H3267

Date Received: 8/22/2023

Field Sample #: P-260-R34E | Sampled: 8/16/2023 09:46

Sample ID: 23H3267-20

Sample Matrix: Paint

Polychlorinated Biphenyls with 3540 Soxhlet Extraction

Analyte	Results	RL	Units	Dilution	Flag/Qual	Method	Date Prepared	Date/Time Analyzed	Analyst
Aroclor-1016 [1]	ND	20	mg/Kg	50		SW-846 8082A	9/7/23	9/12/23 10:34	TG

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
MS-21	Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 23H3268

The results of analyses performed on the following samples submitted to CON-TEST, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: St. Johnsbury, VT

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
P-261-R34S	23H3268-01	Paint		SW-846 8082A

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

MS-21

Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.

Analyte & Samples(s) Qualified:

Aroclor-1016
B351285-MS1, B351285-MSD1

Aroclor-1016 [2C]
B351285-MS1, B351285-MSD1

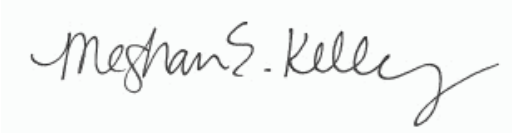
Aroclor-1260
B351285-MS1, B351285-MSD1

Aroclor-1260 [2C]
B351285-MS1, B351285-MSD1

S-01

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:



Decachlorobiphenyl
23H3268-19[P-FD-05]

Decachlorobiphenyl [2C]
23H3268-19[P-FD-05]

Tetrachloro-m-xylene
23H3268-19[P-FD-05]

Tetrachloro-m-xylene [2C]
23H3268-19[P-FD-05]

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Meghan E. Kelley
Reporting Specialist

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
MS-21	Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

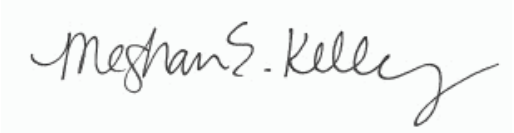
Qualifications:

S-01

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:



Decachlorobiphenyl
23H3270-05[P-FD-011]

Decachlorobiphenyl [2C]
23H3270-05[P-FD-011]

Tetrachloro-m-xylene
23H3270-05[P-FD-011]

Tetrachloro-m-xylene [2C]
23H3270-05[P-FD-011]

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 23J0273

The results of analyses performed on the following samples submitted to CON-TEST, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: St Johnsbury, VT

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
P-275-Ex	23J0273-01	Caulk		SW-846 8082A

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

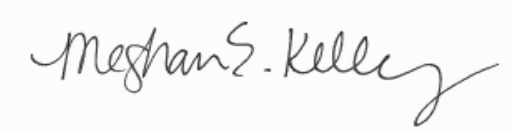
SW-846 8082A

Qualifications:

S-01

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:



Decachlorobiphenyl
23J0273-19[P-293-R18], 23J0273-20[P-294-R18]

Decachlorobiphenyl [2C]
23J0273-19[P-293-R18], 23J0273-20[P-294-R18]

Tetrachloro-m-xylene
23J0273-19[P-293-R18], 23J0273-20[P-294-R18]

Tetrachloro-m-xylene [2C]
23J0273-19[P-293-R18], 23J0273-20[P-294-R18]

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Meghan E. Kelley
Reporting Specialist

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

MS-21

Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.

Analyte & Samples(s) Qualified:

Aroclor-1016
B353838-MS1, B353838-MSD1

Aroclor-1016 [2C]
B353838-MS1, B353838-MSD1

Aroclor-1260
B353838-MS1, B353838-MSD1

Aroclor-1260 [2C]
B353838-MS1, B353838-MSD1

S-01

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:

Decachlorobiphenyl
23J0277-01[P-295-R18]

Decachlorobiphenyl [2C]
23J0277-01[P-295-R18]

Tetrachloro-m-xylene
23J0277-01[P-295-R18]

Tetrachloro-m-xylene [2C]
23J0277-01[P-295-R18]

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
MS-21	Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 23K1921

The results of analyses performed on the following samples submitted to CON-TEST, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: St. Johnsbury, VT

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
P-329-Ex	23K1921-01	Product/Solid		SW-846 8082A

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 “Interim Method”) but augmented with procedures outlined in the 1993 (”final”) version of the method. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. Non-friable organically bound materials present a problem matrix and therefore EMSL recommends gravimetric reduction prior to analysis. Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Woburn, MA NVLAP Lab Code 101147-0, CT PH-0315, MA AA000188, RI AAL-139, VT AL998919, ME LB-0039

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Meghan E. Kelley
Reporting Specialist

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Meghan E. Kelley
Reporting Specialist

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington
Technical Representative

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington
Technical Representative

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington
Technical Representative

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington
Technical Representative

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

Lab Comments:

Disclaimer: Pace Analytical is not responsible for any omitted information on the Chain of Custody. The Chain of Custody is a legal document that must be complete and accurate and is used to determine what analyses the laboratory will perform. Any missing information is not the laboratory's responsibility. Pace Analytical values your partnership on each project and will try to assist with missing information, but will not be held accountable.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington
Technical Representative

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington
Technical Representative

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington
Technical Representative

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

The Chain of Custody is a legal document that must be complete and accurate and is used to determine what analyses the laboratory will perform. Any missing information is not the laboratory's responsibility. Pace Analytical values your partnership on each project and will try to assist with missing information, but will not be held accountable.

[1] **Matrix Codes:**
GW = Ground Water
WW = Waste Water
DW = Drinking Water
A = Air
S = Soil
SL = Sludge
SOL = Solid
O = Other (please define)
Building Material

[2] **Preservation Codes:**
I = Iced
H = HCL
M = Methanol
N = Nitric Acid
S = Sulfuric Acid
B = Sodium Bisulfate
X = Sodium Hydroxide
T = Sodium Thiosulfate
O = Other (please define)

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington
Technical Representative

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington
Technical Representative

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Lisa A. Worthington
Technical Representative

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
H-06	Sample was extracted past the recommended holding time.

Subject: S00001.017 St Johnsbury Armory - Additional Samples on Hold for Analysis
Attachments: 2023-11-3 Contest Chain.pdf

CAUTION: This email originated from outside Pace Analytical. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Hello,

Im looking to have some samples from an older project on hold analyzed. Can you please have the following samples analyzed from the group you received on November 6th (Chain of Custody included for reference);

- P-308-Ex-0.501
- P-313-Ex-0.501
- P-314-Ex-0.501
- P-315-Ex-0.501
- P-315-Ex-0101.5
- P-316-Ex-0.501
- P-321-Ex-0.501
- P-323-Ex-0.501
- P-326-Ex-0.501

Let me know if you have any questions, thanks,

Bridget Fortier, EIT *(she/her/hers)*

APPENDIX C

BORING LOG

Project: St. Johnsbury Armory

Location: St. Johnsbury, VT

Nobis Project No.: S00001.017

Boring No.: **P-305-Ex**

Boring Location:

Checked by:

Date Start: November 1, 2023

Date Finish: November 1, 2023

Contractor: Drilex Environmental, Inc.

Driller: D. Steinhart

Nobis Rep.: B. Fortier

Rig Type / Model: Geoprobe Handheld Large Bore Sampler

Hammer Type: N/A

Hammer Hoist: N/A

Ground Surface Elev.:

Datum:

	Drilling Method	Sampler
Type	N/A	Macro-Core Liners
Size ID (in.)	N/A	1x24
Advancement	Direct Push	N/A

Groundwater Observations

Date	Time	Depth Below Ground (ft.)	Depth of Casing (ft.)	Depth to Bottom of Hole (ft.)	Stabilization Time

Depth (ft.)	SAMPLE INFORMATION Type & No.	Rec (in.)	Depth (ft.)	Blows/ 6 in.	Ground Water	LITHOLOGY Graphic	Stratum Elev. / Depth (ft.)	SAMPLE DESCRIPTION AND REMARKS (Classification System: Modified Burmister)	NOTES
1	S-1	16	0-2				/ 0.1 ASPHALT / SAND / 0.5	S-1A (1"): Light brown, fine to coarse SAND, some fine Gravel, few asphalt fragments. Dry. S-1B (1"): Dark brown, fine SAND, some Silt. Dry. S-1C (4"): Tan, fine SAND. Dry. S-1D (10"): Light brown, fine SAND, some Clay, trace Silt. Dry.	
2							CLAYEY SAND / 2.0		
3	S-2	20	2-4					S-2A (20"): Tan, fine to medium SAND. Dry.	
4									
5	S-3	21	4-6				SAND	S-3A (3"): Brown, fine to medium SAND. Dry. S-3B (17"): Light gray, fine to medium SAND. Dry.	
6									
7	S-4	23	6-8					S-4A (3"): Dark brown, fine to medium SAND. Dry. S-4B (15"): Light tan, fine to medium SAND, trace Silt. Dry.	
8							/ 7.5 SILT / 8.0	S-4C (5"): Light tan, SILT and fine Sand. Dry.	
9								Boring terminated at 8 feet.	

Soil	Percentage	Non-Soil
trace	5 - 10	very few
little	10 - 20	few
some	20 - 35	several
and	35 - 50	numerous

NOTES:

1) P-305-EX-0000.5, P-305-EX-00.501, P-305-EX-0101.5, P-305-EX-01.502, P-305-EX-0202.5, P-305-EX-02.5-03, P-305-EX-0303.5, P-305-EX-03.504, P-305-EX-0404.5, P-305-EX-04.505, P-305-EX-0506, P-305-EX-0607, P-305-EX-0708.

2) Sample collection began at 09:00 and concluded at 09:12. Sample P-305-EX-0506 associated with FD-19.

Soil descriptions, and lithology, are based on visual classifications and should be considered approximate. Stratification lines are approximate boundaries between stratums; transitions may be gradual.

Boring Location:

Checked by:

Date Start: November 1, 2023

Date Finish: November 1, 2023

Contractor: Drilex Environmental, Inc.

Driller: D. Steinhart

Nobis Rep.: B. Fortier

Rig Type / Model: Geoprobe Handheld Large Bore Sampler

Hammer Type: N/A

Hammer Hoist: N/A

Ground Surface Elev.:

Datum:

	Drilling Method	Sampler
Type	N/A	Macro-Core Liners
Size ID (in.)	N/A	1x24
Advancement	Direct Push	N/A

Groundwater Observations

Date	Time	Depth Below Ground (ft.)	Depth of Casing (ft.)	Depth to Bottom of Hole (ft.)	Stabilization Time

Depth (ft.)	Sample Info: Type & No.	Rec (in.)	Depth (ft.)	Blows/ 6 in.	Ground Water	Graphic	Stratum Elev. / Depth (ft.)	Sample Description and Remarks (Classification System: Modified Burmister)	Notes
1	S-1	17	0-2				ASPHALT / 0.2	S-1A (2"): Gray, asphalt. Dry. S-1B (15"): Tan, fine to medium SAND. Dry.	
2									
3	S-2	23	2-4				SAND	S-2A (23"): Tan, fine to medium SAND. Dry.	
4							/ 4.0		
5	S-3	24	4-6					S-3A (24"): Tan, fine to medium SAND, trace Silt. Dry.	
6									
7	S-4	24	6-8				SILTY SAND	S-4A (24"): Tan, fine to medium SAND, trace Silt. Dry.	
8							/ 8.0		
9								Boring terminated at 8 feet.	

Soil	Percentage	Non-Soil
trace	5 - 10	very few
little	10 - 20	few
some	20 - 35	several
and	35 - 50	numerous

NOTES:

1) P-317-EX-0000.5, P-317-EX-00.501, P-317-EX-0101.5, P-317-EX-01.502, P-317-EX-0202.5, P-317-EX-02.5-03, P-317-EX-0303.5, P-317-EX-03.504, P-317-EX-0404.5, P-317-EX-04.505, P-317-EX-0506, P-317-EX-0607, P-317-EX-0708.

2) Sample collection began at 14:55 and concluded at 15:07.

Soil descriptions, and lithology, are based on visual classifications and should be considered approximate. Stratification lines are approximate boundaries between stratums; transitions may be gradual.

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

20/Building Material Samples: P-001-R03E, P-002-R03S, P-003-R03W, P-004-R03C, P-005-R03WT, P-006-R03D, P-007-R04E, P-008-R04S, P-009-R04W, P-010-R04WT, P-011-R04D, P-012-RO5E, P-013-R05S, P-014-R05W, P-015-R05C, P-016-R05F, P-017-R05WT, P-018-R06E, P-019-R06S, P-020-R06C
3/Field Duplicate Pairs: P-018-R06E / P-FD-01 (located in SDG 23H3268), P-003-R03W / P-FD-12 (located in SDG 23H3270), P-009-R04W / P-FD-13 (located in SDG 23H3270)

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on August 14, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) for St. Johnsbury Armory, which appends the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

*	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
*	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that quantitation limits for non-detect results exceeded the project action limit (PAL) of ≤ 1 mg/kg for total PCBs in all samples due to required sample dilutions.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Case#: NA
Date: 09/27/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23H3248
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) building material samples, including three field duplicate samples, were listed on the COC for SDG 23H3248. The samples were collected on 08/14/2023 and were received at the laboratory on 08/22/2023 at temperatures ranging from 2.2 to 5.6 °C.

Sample ID	Laboratory ID	Analyses
P-001-R03E	23H3248-01	PCBs
P-002-R03S	23H3248-02	PCBs
P-003-R03W	23H3248-03	PCBs
P-004-R03C	23H3248-04	PCBs
P-005-R03WT	23H3248-05	PCBs
P-006-R03D	23H3248-06	PCBs
P-007-R04E	23H3248-07	PCBs
P-008-R04S	23H3248-08	PCBs
P-009-R04W	23H3248-09	PCBs
P-010-R04WT	23H3248-10	PCBs
P-011-R04D	23H3248-11	PCBs
P-012-RO5E	23H3248-12	PCBs
P-013-R05S	23H3248-13	PCBs
P-014-R05W	23H3248-14	PCBs
P-015-R05C	23H3248-15	PCBs
P-016-R05F	23H3248-16	PCBs
P-017-R05WT	23H3248-17	PCBs
P-018-R06E	23H3248-18	PCBs
P-019-R06S	23H3248-19	PCBs
P-020-R06C	23H3248-20	PCBs

A complete laboratory report was received for SDG 23H3248.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not assessed for S2AVM.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples. No action is required.

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed on sample P-019-R06S (23H3248-19).

Percent recoveries of Aroclors 1016 and 1260 exceeded the Program QAPP limits of 40-140% in the MS and MSD analyses, on both columns. RPDs were ≤ 30%, as specified in the Program QAPP. The laboratory indicated the percent recoveries were high due to the contribution of other Aroclors (i.e., Aroclor 1254) present in the parent sample. No action is taken.

9. **Laboratory Duplicates**

PCBs: Not applicable to this analysis.

10. **Serial Dilution (metals only)**

PCBs: Not applicable to this analysis.

11. Field Duplicate Precision

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

The following field duplicate pairs are associated with the samples of this SDG.

- P-018-R06E / P-FD-01 (23H3248-18 / 23H3268-15)
- P-003-R03W / P-FD-12 (23H3248-03 / 23H3270-06)
- P-009-R04W / P-FD-13 (23H3248-09 / 23H3270-07)

PCBs: Aroclor results met field duplicate precision criteria and no actions are required.

12. Internal Standards

Not applicable to these analyses.

13. Dual Column Precision (PCBs only)

Dual column precision criteria (≤ 25% RPD per NFG) were met for all Aroclor detections > QL. No action is required.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results exceeded the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA, for all samples. All samples required a 1/10 dilution due to the presence of individual Aroclor(s) in the samples. The QLs were greater than 1 mg/kg in all samples due to the required sample dilutions.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

1/Field Duplicate Pair: P-040-R09W / P-FD-02 (located in SDG 23H3268)

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on August 14, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) for St. Johnsbury Armory, which appends the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
NA	•	Matrix Spike Analysis

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
*	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that quantitation limits for non-detect results exceeded the project action limit (PAL) of ≤ 1 mg/kg for total PCBs in all samples due to required sample dilutions.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 09/27/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23H3250
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) building material samples, including one field duplicate sample, were listed on the COC for SDG 23H3250. The samples were collected on 08/14/2023 and were received at the laboratory on 08/22/2023 at temperatures ranging from 2.2 to 5.6 °C.

Sample ID	Laboratory ID	Analyses
P-021-R06WT	23H3250-01	PCBs
P-022-R06D	23H3250-02	PCBs
P-023-R06F	23H3250-03	PCBs
P-024-R05D	23H3250-04	PCBs
P-025-R07E	23H3250-05	PCBs
P-026-R07S	23H3250-06	PCBs
P-027-R07C	23H3250-07	PCBs
P-028-R07F	23H3250-08	PCBs
P-029-R07WT	23H3250-09	PCBs
P-030-R09E	23H3250-10	PCBs
P-031-R09S	23H3250-11	PCBs
P-032-R09S	23H3250-12	PCBs
P-033-R08C	23H3250-13	PCBs
P-034-R08F	23H3250-14	PCBs
P-035-R08WT	23H3250-15	PCBs
P-036-R08D	23H3250-16	PCBs
P-037-R07D	23H3250-17	PCBs
P-038-R09E	23H3250-18	PCBs
P-039-R09S	23H3250-19	PCBs
P-040-R09W	23H3250-20	PCBs

A complete laboratory report was received for SDG 23H3250.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

3. **Calibration Issues**

   Not assessed for S2AVM.

4. **Lab and Field Blanks**

   PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

   An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

   Not assessed for S2AVM.

6. **Surrogates (PCBs only)**

   PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples. No action is required.

7. **Laboratory Control Samples**

   PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

   PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

   If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
   If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

   MS/MSD analyses were not assigned for the samples of this SDG. No action is required.

9. **Laboratory Duplicates**

   PCBs: Not applicable to this analysis.

10. **Serial Dilution (metals only)**

    PCBs: Not applicable to this analysis.

11. **Field Duplicate Precision**

    Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

    The following field duplicate pair is associated with the samples of this SDG.

    - P-040-R09W / P-FD-02 (23H3250-20 / 23H3268-16)

PCBs: Aroclor results met field duplicate precision criteria and no actions are required.

12. Internal Standards

Not applicable to these analyses.

13. Dual Column Precision (PCBs only)

Dual column precision criteria (≤ 25% RPD per NFG) were met for all Aroclor detections > QL. No action is required.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results exceeded the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA, for all samples. All samples required a 1/10 dilution due to the presence of individual Aroclor(s) in the samples. The QLs were greater than 1 mg/kg in all samples due to the required sample dilutions.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

20/Building Material Samples: P-041-R09C, P-042-R09F, P-043-R09WT, P-044-R09D, P-045-R10E, P-046-R10S, P-047-R10W, P-048-R18E, P-049-R18S, P-050-R18NB, P-051-R18NC, P-052-R18C, P-053-R20E, P-054-R20W, P-055-R20NB, P-056-R20NC, P-057-R21EC, P-058-R21EB, P-059-R21S, P-060-R21C

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on August 14, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) for St. Johnsbury Armory, which appends the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
*	•	Matrix Spike Analysis

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
NA	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that quantitation limits for non-detect results exceeded the project action limit (PAL) of ≤ 1 mg/kg for total PCBs in all samples due to required sample dilutions.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 09/27/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23H3253
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) building material samples were listed on the COC for SDG 23H3253. The samples were collected on 08/14/2023 and were received at the laboratory on 08/22/2023 at temperatures ranging from 2.2 to 5.6 °C.

Sample ID	Laboratory ID	Analyses
P-041-R09C	23H3253-01	PCBs
P-042-R09F	23H3253-02	PCBs
P-043-R09WT	23H3253-03	PCBs
P-044-R09D	23H3253-04	PCBs
P-045-R10E	23H3253-05	PCBs
P-046-R10S	23H3253-06	PCBs
P-047-R10W	23H3253-07	PCBs
P-048-R18E	23H3253-08	PCBs
P-049-R18S	23H3253-09	PCBs
P-050-R18NB	23H3253-10	PCBs
P-051-R18NC	23H3253-11	PCBs
P-052-R18C	23H3253-12	PCBs
P-053-R20E	23H3253-13	PCBs
P-054-R20W	23H3253-14	PCBs
P-055-R20NB	23H3253-15	PCBs
P-056-R20NC	23H3253-16	PCBs

P-058-R21EB	23H3253-18	PCBs
P-059-R21S	23H3253-19	PCBs
P-060-R21C	23H3253-20	PCBs

A complete laboratory report was received for SDG 23H3253.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not assessed for S2AVM.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples except where required sample dilutions caused the surrogates to dilute out of the samples. Dilution factors ranged from 1/5 to 1/1000. Surrogates were diluted out of samples that had sample dilutions > 1/20. No action is required.

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed on sample P-043-R09WT (23H3253-03).

Percent recoveries of Aroclors 1016 and 1260 exceeded the Program QAPP limits of 40-140% in the MS and MSD analyses, on both columns. RPDs were ≤ 30%, as specified in the Program QAPP. The laboratory indicated the percent recoveries were high due to the contribution of other Aroclors (i.e., Aroclor 1254) present in the parent sample. No action is taken.

9. **Laboratory Duplicates**

PCBs: Not applicable to this analysis.

10. **Serial Dilution (metals only)**

PCBs: Not applicable to this analysis.

11. Field Duplicate Precision

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

A field duplicate sample was not submitted with the samples of this SDG. No actions are required.

12. Internal Standards

Not applicable to these analyses.

13. Dual Column Precision (PCBs only)

Dual column precision criteria (≤ 25% RPD per NFG) were met for all Aroclor detections > QL. No action is required.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results exceeded the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA, for all samples. All samples required dilutions due to the presence of individual Aroclor(s) in the samples. Dilutions ranged from 1/5 through 1/1,000. The QLs were > 1 mg/kg in all samples due to the required sample dilutions.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Polychlorinated Biphenyls (PCBs by 8082A):

20/Building Material Samples: P-061-R21D, P-062-S01S, P-063-S01W, P-064-S01N, P-065-S01C, P-066-S01C, P-067-S01D, P-068-R22EDW, P-069-R22EC, P-070-R22WPW, P-071-R22WB, P-072-R2D, P-073-R22C, P-074-R23EC, P-075-R23EB, P-076-R23EWT, P-077-R23W, P-078-R23N, P-079-R23D, P-080-R22SPW
1/Field Duplicate Pair: P-065-S01C / P-FD-03 (located in SDG 23H3268)

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on August 14, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) for St. Johnsbury Armory, which appends the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	• Overall Evaluation of Data and Potential Usability Issues
*	• Data Completeness
*	• Preservation and Technical Holding Times
*	• Blanks
*	• Surrogates (PCBs only)
NA	• Internal Standards

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

*	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that quantitation limits for non-detect results exceeded the project action limit (PAL) of ≤ 1 mg/kg for total PCBs in all samples except for sample P-066-S01C, due to required sample dilutions.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Results were qualified due to field duplicate imprecision.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

	Aroclors 1248 and 1254	P-065-S01C, P-066-S01C	Field duplicate imprecision	J / UJ	

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 09/27/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23H3255
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) building material samples, including one field duplicate sample, were listed on the COC for SDG 23H3255. The samples were collected on 08/14/2023 and were received at the laboratory on 08/22/2023 at temperatures ranging from 2.2 to 5.6 °C.

Sample ID	Laboratory ID	Analyses
P-061-R21D	23H3255-01	PCBs
P-062-S01S	23H3255-02	PCBs
P-063-S01W	23H3255-03	PCBs
P-064-S01N	23H3255-04	PCBs
P-065-S01C	23H3255-05	PCBs
P-066-S01C	23H3255-06	PCBs
P-067-S01D	23H3255-07	PCBs
P-068-R22EDW	23H3255-08	PCBs
P-069-R22EC	23H3255-09	PCBs
P-070-R22WPW	23H3255-10	PCBs
P-071-R22WB	23H3255-11	PCBs
P-072-R2D	23H3255-12	PCBs
P-073-R22C	23H3255-13	PCBs
P-074-R23EC	23H3255-14	PCBs
P-075-R23EB	23H3255-15	PCBs
P-076-R23EWT	23H3255-16	PCBs
P-077-R23W	23H3255-17	PCBs
P-078-R23N	23H3255-18	PCBs
P-079-R23D	23H3255-19	PCBs
P-080-R22SPW	23H3255-20	PCBs

A complete laboratory report was received for SDG 23H3255.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not assessed for S2AVM.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples except where required sample dilutions caused the surrogates to dilute out of the samples. Dilution factors ranged from 1/10 to 1/200. Surrogates were diluted out of samples that had sample dilutions > 1/20. No action is required.

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed on sample P-069-R22EC (23H3255-09).

Percent recoveries of Aroclors 1016 and 1260 exceeded the Program QAPP limits of 40-140% in the MS and MSD analyses, on both columns. RPDs were ≤ 30%, as specified in the Program QAPP. The laboratory indicated the percent recoveries were high due to the contribution of other Aroclors (i.e., Aroclor 1254) present in the parent sample. No action is taken.

9. **Laboratory Duplicates**

PCBs: Not applicable to this analysis.

10. **Serial Dilution (metals only)**

PCBs: Not applicable to this analysis.

11. Field Duplicate Precision

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

The following field duplicate pair is associated with the samples of this SDG.

- P-065-S01C / P-FD-03 (23H3255-05 / 23H3268-17)

PCBs: Aroclor results met field duplicate precision criteria except for results for Aroclor 1248, where the absolute difference was > 4x QL for results < 5x QL for Aroclor 1248, and for results for Aroclor 1254, where the RPD was > 50% for results > 5x QL. Based on the EPA Region I Supplemental Data Review Guidance (Region I Supplement, 2020), detected and non-detect results for Aroclor 1248 and Aroclor 1254 are qualified as estimated (J/UJ) in samples P-065-S01C (23H3255-05) and P-066-S01C (23H3255-06) due to field duplicate imprecision. Professional judgement based on the EPA Region I Supplement (2020) was used to qualify only the similar matrix/location "S01C" samples. Detected results for Aroclors 1248 and 1254 are also qualified as estimated in sample P-FD-03 (located in SDG 23H3268).

12. Internal Standards

Not applicable to these analyses.

13. Dual Column Precision (PCBs only)

Dual column precision criteria (≤ 25% RPD per NFG) were met for all Aroclor detections > QL. No action is required.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results exceeded the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA, for all samples except sample P-066-S01C, where a dilution was not required. All remaining samples required dilutions due to the presence of individual Aroclors(s) in the samples. The QLs were > 1 mg/kg in all samples requiring dilutions. Dilutions ranged from 1/10 to 1/200.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Field Duplicate Evaluation

SDG: 23H3255 PCBs

Analyte	Original Result mg/kg	Qual	Duplicate Result mg/kg	Qual	RPD ≤ 50%	Abs Diff	Comment[1]

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

20/Building Material Samples: P-081-R22SB, P-082-R24E, P-083-R24SC, P-084-R24SB, P-085-R24W, P-086-R25E, P-087-R25S, P-088-R2SCDW, P-089-R2SCP, P-090-R25AE, P-091-R25AS, P-092-R25ACDW, P-093-R25ACP, P-094-R21W, P-095-R21FN, P-096-R21FS, P-097-R24AS, P-098-R24AW, P-099-R24AN, P-100-R24AC

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on August 14, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) for St. Johnsbury Armory, which appends the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
*	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
NA	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that quantitation limits for non-detect results exceeded the project action limit (PAL) of ≤ 1 mg/kg for total PCBs in all samples due to required sample dilutions.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Linda Terzis

SDG: 23H3256
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) building material samples were listed on the COC for SDG 23H3256. The samples were collected on 08/14/2023 and were received at the laboratory on 08/22/2023 at temperatures ranging from 2.2 to 5.6 °C.

Sample ID	Laboratory ID	Analyses
P-081-R22SB	23H3256-01	PCBs
P-082-R24E	23H3256-02	PCBs
P-083-R24SC	23H3256-03	PCBs
P-084-R24SB	23H3256-04	PCBs
P-085-R24W	23H3256-05	PCBs
P-086-R25E	23H3256-06RE1	PCBs
P-087-R25S	23H3256-07	PCBs
P-088-R2SCDW	23H3256-08RE1	PCBs
P-089-R2SCP	23H3256-09RE1	PCBs
P-090-R25AE	23H3256-10RE1	PCBs
P-091-R25AS	23H3256-11	PCBs
P-092-R25ACDW	23H3256-12RE1	PCBs
P-093-R25ACP	23H3256-13RE1	PCBs
P-094-R21W	23H3256-14RE1	PCBs
P-095-R21FN	23H3256-15	PCBs
P-096-R21FS	23H3256-16	PCBs
P-097-R24AS	23H3256-17	PCBs
P-098-R24AW	23H3256-18RE1	PCBs
P-099-R24AN	23H3256-19	PCBs
P-100-R24AC	23H3256-20	PCBs

A complete laboratory report was received for SDG 23H3256.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blanks associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not assessed for S2AVM.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples except where required sample dilutions caused the surrogates to dilute out of the samples. Dilution factors ranged from 1/10 to 1/100. Surrogates were diluted out of samples that had sample dilutions > 1/20. No action is required.

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pairs associated with the samples met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed on sample P-081-R22SB (23H3256-01).

Percent recoveries of Aroclors 1016 and 1260 exceeded the Program QAPP limits of 40-140% in the MS and MSD analyses, on both columns. Three of the four RPDs were > 30%, as specified in the Program QAPP. The laboratory indicated the percent recoveries were high due to the contribution of other Aroclors (i.e., Aroclor 1254) in the parent sample. No action is taken.

9. **Laboratory Duplicates**

PCBs: Not applicable to this analysis.

10. **Serial Dilution (metals only)**

PCBs: Not applicable to this analysis.

11. Field Duplicate Precision

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

A field duplicate sample was not submitted with the samples of this SDG. No actions are required.

12. Internal Standards

Not applicable to these analyses.

13. Dual Column Precision (PCBs only)

Dual column precision criteria (≤ 25% RPD per NFG) were met for all Aroclor detections > QL. No action is required.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results exceeded the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA, for all samples. All samples required dilutions due to the presence of individual Aroclors(s) in the samples. Dilutions ranged from 1/10 to 1/100. The QLs were greater than 1 mg/kg in the samples due to the required sample dilutions.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

20/Building Material Samples: P-101-R26E, P-102-R26SC, P-103-R26SB, P-104-R26N, P-105-R26C, P-106-R-27S, P-107-R27NC, P-108-R27NB, P-109-R27AE, P-110-R27AW, P-111-R28SC, P-112-R28SB, P-113-R28WC, P-114-R28WB, P-115-R28D, P-116-29WC, P-117-29WB, P-118-29NB, P-119-29NC, P-120-R30E
1/Field Duplicate Pair: P-111-R28SC / P-FD-04 (located in SDG 23H3268)

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on August 14, 2023 and August 15, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) for St. Johnsbury Armory, which appends the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	• Overall Evaluation of Data and Potential Usability Issues
*	• Data Completeness
*	• Preservation and Technical Holding Times
*	• Blanks
*	• Surrogates (PCBs only)
NA	• Internal Standards

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

*	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
*	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that quantitation limits for non-detect results exceeded the project action limit (PAL) of ≤ 1 mg/kg for total PCBs in all samples due to required sample dilutions.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Case#: NA
Date: 09/28/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23H3257
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) building material samples, including one field duplicate sample, were listed on the COC for SDG 23H3257. The samples were collected on 08/14/2023 and 08/15/2023 and were received at the laboratory on 08/22/2023 at temperatures ranging from 2.2 to 5.6 °C.

Sample ID	Laboratory ID	Analyses
P-101-R26E	23H3257-01	PCBs
P-102-R26SC	23H3257-02	PCBs
P-103-R26SB	23H3257-03	PCBs
P-104-R26N	23H3257-04	PCBs
P-105-R26C	23H3257-05	PCBs
P-106-R-27S	23H3257-06	PCBs
P-107-R27NC	23H3257-07	PCBs
P-108-R27NB	23H3257-08	PCBs
P-109-R27AE	23H3257-09	PCBs
P-110-R27AW	23H3257-10	PCBs
P-111-R28SC	23H3257-11	PCBs
P-112-R28SB	23H3257-12	PCBs
P-113-R28WC	23H3257-13	PCBs
P-114-R28WB	23H3257-14	PCBs
P-115-R28D	23H3257-15	PCBs
P-116-29WC	23H3257-16	PCBs
P-117-29WB	23H3257-17	PCBs
P-118-29NB	23H3257-18	PCBs
P-119-29NC	23H3257-19	PCBs
P-120-R30E	23H3257-20	PCBs

A complete laboratory report was received for SDG 23H3257.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

3. **Calibration Issues**

   Not assessed for S2AVM.

4. **Lab and Field Blanks**

   PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

   An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

   Not assessed for S2AVM.

6. **Surrogates (PCBs only)**

   PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples. No action is required.

7. **Laboratory Control Samples**

   PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

   PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

   If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
   If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

   MS/MSD analyses were performed on sample P-114-R28WB (23H3257-14).

   Percent recoveries of Aroclors 1016 and 1260 exceeded the Program QAPP limits of 40-140% in the MS and MSD analyses, on both columns. RPDs also exceeded the ≤ 30% limit specified in the Program QAPP. The laboratory indicated the percent recoveries were high due to the contribution of other Aroclors (i.e., Aroclor 1254) in the parent sample. No action is taken.

9. **Laboratory Duplicates**

   PCBs: Not applicable to this analysis.

10. **Serial Dilution (metals only)**

    PCBs: Not applicable to this analysis.

11. Field Duplicate Precision

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

The following field duplicate pair is associated with the samples of this SDG.

- P-111-R28SC / P-FD-04 (23H3257-11 / 23H3268-18)

PCBs: Aroclor results met field duplicate precision criteria. No actions are required.

12. Internal Standards

Not applicable to these analyses.

13. Dual Column Precision (PCBs only)

Dual column precision criteria (≤ 25% RPD per NFG) were met for all Aroclor detections > QL. No action is required.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results exceeded the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA, for all samples. All samples required a 1/10 dilution due to the presence of individual Aroclors(s) in the samples. The QLs were > 1 mg/kg in all samples due to the required dilutions.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Field Duplicate Evaluation

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

20/Building Material Samples: P-121-R30NC, P-122-R30NB, P-123-R30C, P-124-R31W, P-125-R31NC, P-126-R33E, P-127-R33NC, P-128-R34C, P-129-R35W, P-130-R37E, P-131-R37S, P-132-R31NB, P-133-R16EP, P-134-R16EW, P-135-R16WT, P-136-GN, P-137-GFN, P-138-GFE, P-139-GFS, P-140-GFW
3/Field Duplicate Pairs: P-127-R33NC / P-FD-05 (located in SDG 23H3268), P-133-R16EP / P-FD-06 (located in SDG 23H3268), P-131-R37S / P-FD-11 (located in SDG 23H3270)

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on August 15, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) for St. Johnsbury Armory, which appends the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	• Overall Evaluation of Data and Potential Usability Issues
*	• Data Completeness
*	• Preservation and Technical Holding Times
*	• Blanks
*	• Surrogates (PCBs only)
NA	• Internal Standards

Nobis Group®
585 Middlesex Street

*	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
*	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that quantitation limits for non-detect results exceeded the project action limit (PAL) of ≤ 1 mg/kg for total PCBs in several samples due to required sample dilutions.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Case#: NA
Date: 09/28/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23H3258
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) building material samples, including three field duplicate samples, were listed on the COC for SDG 23H3258. The samples were collected on 08/15/2023 and were received at the laboratory on 08/22/2023 at temperatures ranging from 2.2 to 5.6 °C.

Sample ID	Laboratory ID	Analyses
P-121-R30NC	23H3258-01	PCBs
P-122-R30NB	23H3258-02	PCBs
P-123-R30C	23H3258-03	PCBs
P-124-R31W	23H3258-04	PCBs
P-125-R31NC	23H3258-05	PCBs
P-126-R33E	23H3258-06	PCBs
P-127-R33NC	23H3258-07	PCBs
P-128-R34C	23H3258-08	PCBs
P-129-R35W	23H3258-09	PCBs
P-130-R37E	23H3258-10	PCBs
P-131-R37S	23H3258-11	PCBs
P-132-R31NB	23H3258-12	PCBs
P-133-R16EP	23H3258-13	PCBs
P-134-R16EW	23H3258-14	PCBs
P-135-R16WT	23H3258-15	PCBs

P-137-GFN	23H3258-17	PCBs
P-138-GFE	23H3258-18	PCBs
P-139-GFS	23H3258-19	PCBs
P-140-GFW	23H3258-20	PCBs

A complete laboratory report was received for SDG 23H3258.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not assessed for S2AVM.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples except where required sample dilutions caused the surrogates to dilute out of the samples. Dilution factors ranged from 1/10 to 1/50. Surrogates were diluted out of samples that had sample dilutions > 1/20. No action is required.

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed on sample P-136-GN (23H3258-16).

The percent recovery of Aroclor 1016 (147%) exceeded the Program QAPP limits of 40-140% in the MSD analysis on the primary column. RPDs were ≤ 30%, as specified in the Program QAPP, except for the RPD for Aroclor 1260 on the confirmation column (35.4%). Results for Aroclors 1016, 1221, 1232, and 1242 (all reported from the primary column analysis) are non-detect in the parent sample. Based on the NFGs (2020), the non-detect results are accepted unqualified since the potential bias is high. Results for Aroclor 1260 were reported from the primary column and therefore, no actions are taken for the exceeded RPD limit for Aroclor 1260 on the confirmation column. Qualification considerations are limited to the parent sample only due to the nature of the samples (building material).

9. **Laboratory Duplicates**

PCBs: Not applicable to this analysis.

10. Serial Dilution (metals only)

PCBs: Not applicable to this analysis.

11. Field Duplicate Precision

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

The following field duplicate pairs are associated with the samples of this SDG.

- P-127-R33NC / P-FD-05 (23H3258-07 / 23H3268-19)
- P-133-R16EP / P-FD-06 (23H3258-13 / 23H3268-20)
- P-131-R37S / P-FD-11 (23H3258-11 / 23H3270-05)

PCBs: Aroclor results met field duplicate precision criteria and no actions are required.

12. Internal Standards

Not applicable to these analyses.

13. Dual Column Precision (PCBs only)

Dual column precision criteria (≤ 25% RPD per NFG) were met for all Aroclor detections > QL. No action is required.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results exceeded the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA, for several samples due to required dilutions. Dilutions ranged from 1/5 to 1/50. The QLs were greater than 1 mg/kg in samples requiring dilutions ≥ 1/20.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

2/Field Duplicate Pairs: P-146-EWP2 / P-FD-07 (located in SDG 23H3270), P-158-R11EDW / P-FD-08 (located in SDG 23H3270)

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on August 15, 2023 and August 16, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) for St. Johnsbury Armory, which appends the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

*	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that quantitation limits for non-detect results exceeded the project action limit (PAL) of ≤ 1 mg/kg for total PCBs in several samples due to required sample dilutions.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Results were qualified due to field duplicate imprecision.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) building material samples, including two field duplicate samples, were listed on the COC for SDG 23H3259. The samples were collected on 08/15/2023 and 08/16/2023 and were received at the laboratory on 08/22/2023 at temperatures ranging from 2.2 to 5.6 °C.

P-159-R14WT	23H3259-19	PCBs
P-160-R14CWP	23H3259-20	PCBs

A complete laboratory report was received for SDG 23H3259.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not assessed for S2AVM.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples except where required sample dilutions caused the surrogates to dilute out of the samples. Dilution factors ranged from 1/5 to 1/100. Surrogates were diluted out of samples that had sample dilutions > 1/20. In addition, the recovery of the surrogate decachlorobiphenyl (DCB) for sample P-150-EPB3 (23H3259-10) exceeded the 30-150% limits (154%) on the confirmatory analytical column. All Aroclor results were reported from the primary column analysis for this sample and therefore, no actions are required.

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed on sample P-151-EP1 (23H3259-11).

Percent recoveries of Aroclors 1016 and 1260 were within the Program QAPP limits of 40-140% in the MS and MSD analyses on both analytical columns. RPDs were ≤ 30%, as specified in the Program QAPP. No actions are required.

9. **Laboratory Duplicates**

PCBs: Not applicable to this analysis.

10. **Serial Dilution (metals only)**

PCBs: Not applicable to this analysis.

11. Field Duplicate Precision

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

The following field duplicate pairs are associated with the samples of this SDG.

- P-146-EWP2 / P-FD-07 (23H3259-06 / 23H3270-01)
- P-158-R11EDW / P-FD-08 (23H3259-18 / 23H3270-02)

PCBs: Aroclor results met field duplicate precision criteria except for the results Aroclor 1248 in field duplicate pair P-158-R11EDW / P-FD-08, where the absolute difference was > 4x QL for results < 5x QL. Based on the EPA Region I Supplemental Guidance (2020), the detect and non-detect results for Aroclor 1248 are qualified as estimated (J/UJ) in samples P-158-R11EDW and P-FD-08 due to field duplicate imprecision. Professional judgement was used to limit qualification to the field duplicate pair only.

12. Internal Standards

Not applicable to these analyses.

13. Dual Column Precision (PCBs only)

Dual column precision criteria (≤ 25% RPD per NFG) were met for all Aroclor detections > QL. No action is required.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results exceeded the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA, for several samples due to required sample dilutions. Dilutions ranged from 1/5 to 1/100. The QLs were greater than 1 mg/kg in samples requiring dilutions ≥ 1/20.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

20/Building Material Samples: P-161-R16SWP, P-162-R12SDW, P-163-R14WDW, P-164-R11WP, P-165-R16D, P-166-EX, P-167-EX, P-168-EX, P-169-EX, P-170-EX, P-171-EX, P-172-EX, P-173-EX, P-174-EX, P-175-EX, P-176-EX, P-177-EX, P-178-EX, P-179-EX, P-180-EX
1/Field Duplicate Pair: P-176-EX / P-FD-10 (located in SDG 23H3270)

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on August 16, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) for St. Johnsbury Armory, which appends the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	• Overall Evaluation of Data and Potential Usability Issues
*	• Data Completeness
*	• Preservation and Technical Holding Times
*	• Blanks
*	• Surrogates (PCBs only)
NA	• Internal Standards
	• Matrix Spike Analysis
NA	• Laboratory Duplicates

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
*	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that quantitation limits for non-detect results exceeded the project action limit (PAL) of ≤ 1 mg/kg for total PCBs in several samples due to required sample dilutions.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Results were qualified due to exceeded MS/MSD RPD criteria.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Linda Terzis

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 09/28/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23H3260
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) building material samples, including one field duplicate sample, were listed on the COC for SDG 23H3260. The samples were collected on 08/16/2023 and were received at the laboratory on 08/22/2023 at temperatures ranging from 2.2 to 5.6 °C.

Sample ID	Laboratory ID	Analyses
P-161-R16SWP	23H3260-01	PCBs
P-162-R12SDW	23H3260-02	PCBs
P-163-R14WDW	23H3260-03	PCBs
P-164-R11WP	23H3260-04	PCBs
P-165-R16D	23H3260-05	PCBs
P-166-EX	23H3260-06	PCBs
P-167-EX	23H3260-07	PCBs
P-168-EX	23H3260-08	PCBs
P-169-EX	23H3260-09	PCBs
P-170-EX	23H3260-10	PCBs
P-171-EX	23H3260-11	PCBs
P-172-EX	23H3260-12	PCBs
P-173-EX	23H3260-13	PCBs
P-174-EX	23H3260-14	PCBs
P-175-EX	23H3260-15	PCBs
P-176-EX	23H3260-16	PCBs
P-177-EX	23H3260-17	PCBs
P-178-EX	23H3260-18	PCBs
P-179-EX	23H3260-19	PCBs
P-180-EX	23H3260-20	PCBs

A complete laboratory report was received for SDG 23H3260.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not assessed for S2AVM.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples except where required sample dilutions caused the surrogates to dilute out of the samples. Dilution factors ranged from 1/5 to 1/40,000. Surrogates were diluted out of samples that had sample dilutions > 1/20. No actions are required.

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed on sample P-177-EX (23H3260-17).

Percent recoveries of Aroclors 1016 and 1260 were within the Program QAPP limits of 40-140% in the MS and MSD analyses on both analytical columns. RPDs exceeded the Program QAPP criterion of ≤ 30% in 3 of the 4 RPDs. RPDs for the Aroclor 1016 and 1260 results exceeded the Program QAPP limit of ≤ 30% on the primary column. All Aroclor results for the parent sample were reported from the primary column analysis. Based on the NFGs (2020), the detected Aroclor results are qualified as estimated (J) in sample P-177-EX due to the high RPDs and non-detect results are accepted unqualified. Note that only Aroclor 1254 was detected in the sample.

9. **Laboratory Duplicates**

PCBs: Not applicable to this analysis.

10. Serial Dilution (metals only)

PCBs: Not applicable to this analysis.

11. Field Duplicate Precision

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

The following field duplicate pair is associated with the samples of this SDG.

- P-176-EX / P-FD-10 (23H3260-16 / 23H3270-04)

PCBs: Aroclor results met field duplicate precision criteria and no action is required.

12. Internal Standards

Not applicable to these analyses.

13. Dual Column Precision (PCBs only)

Dual column precision criteria (≤ 25% RPD per NFG) were met for all Aroclor detections > QL. No action is required.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results exceeded the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA, for several samples due to required sample dilutions. Dilutions ranged from 1/5 to 1/40,000. The QLs were greater than 1 mg/kg in samples requiring dilutions ≥ 1/50.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

20/Building Material Samples: P-181-EX, P-182-EX, P-183-EX, P-184-EX, P-185-EX, P-186-EX, P-187-EX, P-188-EX, P-189-EX, P-190-EX, P-191-EX, P-192-EX, P-193-GC, P-194-GC, P-195-GC, P-196-GC, P-197-GC, P-198-GC, P-199, P-200

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on August 16, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) for St. Johnsbury Armory, which appends the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
*	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

NA	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
	•	Target Analyte Identification
	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that quantitation limits for non-detect results exceeded the project action limit (PAL) of ≤ 1 mg/kg for total PCBs in several samples due to required sample dilutions.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Results were qualified due to dual column imprecision.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 09/28/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23H3261
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) building material samples were listed on the COC for SDG 23H3261. The samples were collected on 08/16/2023 and were received at the laboratory on 08/22/2023 at temperatures ranging from 2.2 to 5.6 °C.

Sample ID	Laboratory ID	Analyses
P-181-EX	23H3261-01	PCBs
P-182-EX	23H3261-02	PCBs
P-183-EX	23H3261-03	PCBs
P-184-EX	23H3261-04	PCBs
P-185-EX	23H3261-05	PCBs
P-186-EX	23H3261-06	PCBs
P-187-EX	23H3261-07	PCBs
P-188-EX	23H3261-08	PCBs
P-189-EX	23H3261-09	PCBs
P-190-EX	23H3261-10	PCBs
P-191-EX	23H3261-11	PCBs
P-192-EX	23H3261-12	PCBs
P-193-GC	23H3261-13	PCBs
P-194-GC	23H3261-14	PCBs
P-195-GC	23H3261-15	PCBs
P-196-GC	23H3261-16	PCBs
P-197-GC	23H3261-17	PCBs
P-198-GC	23H3261-18	PCBs
P-199	23H3261-19	PCBs
P-200	23H3261-20	PCBs

A complete laboratory report was received for SDG 23H3261.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not assessed for S2AVM.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples except where required sample dilutions caused the surrogates to dilute out of the samples. Dilution factors ranged from 1/5 to 1/500. Surrogates were diluted out of all samples that required dilution. No actions are required.

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed on sample P-189-EX (23H3261-09).

Percent recoveries of Aroclors 1016 and 1260 exceeded the Program QAPP limits of 40-140% in the MS and MSD analyses on both analytical columns. RPDs were < 30%, as specified in the Program QAPP. The laboratory indicated the percent recoveries were high due to the contribution of other Aroclors (i.e., Aroclor 1254) in the parent sample. No action is taken.

9. **Laboratory Duplicates**

PCBs: Not applicable to this analysis.

10. **Serial Dilution (metals only)**

PCBs: Not applicable to this analysis.

11. Field Duplicate Precision

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

A field duplicate sample was not submitted with the samples of this SDG. No actions are required.

12. Internal Standards

Not applicable to these analyses.

13. Dual Column Precision (PCBs only)

Dual column precision criteria (≤ 25% RPD per NFG) were met for all Aroclor detections > QL except for the Aroclor 1254 detection in sample P-190-EX (23H3261-10), where the RPD was > 25% (25.6%). Based on the NFGs (2020), the detected result for Aroclor 1254 is qualified as estimated (J) in sample P-190-EX due to dual column imprecision.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results exceeded the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA, for several samples due to required sample dilutions. Dilutions ranged from 1/5 to 1/500. The QLs were greater than 1 mg/kg in samples requiring dilutions.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

20/Building Material Samples: P-201, P-202, P-203-EX, P-204-R17W, P-205-R17W, P-206-R17W, P-207-R16C, P-208-R14SP, P-209-R16SP, P-210-R16NWP, P-211-R15CP, P-212-R11EP, P-213-R12CPB, P-214-R12CDW, P-215-R15CPW, P-216-R13CP, P-217-R11SDW, P-218-R13WT, P-219-R14EDW, P-220-S12C

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on August 16, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) for St. Johnsbury Armory, which appends the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
NA	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
NA	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
	•	Target Analyte Identification
	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that quantitation limits for non-detect results exceeded the project action limit (PAL) of ≤ 1 mg/kg for total PCBs in several samples due to required sample dilutions.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Results were qualified due to dual column imprecision.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

PCBs					
	Aroclor 1248	P-209-R16SP	Dual column precision	J	

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 09/28/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23H3264
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) building material samples were listed on the COC for SDG 23H3264. The samples were collected on 08/16/2023 and were received at the laboratory on 08/22/2023 at temperatures ranging from 2.2 to 5.6 °C.

Sample ID	Laboratory ID	Analyses
P-201	23H3264-01	PCBs
P-202	23H3264-02	PCBs
P-203-EX	23H3264-03	PCBs
P-204-R17W	23H3264-04	PCBs
P-205-R17W	23H3264-05	PCBs
P-206-R17W	23H3264-06	PCBs
P-207-R16C	23H3264-07	PCBs
P-208-R14SP	23H3264-08	PCBs
P-209-R16SP	23H3264-09	PCBs
P-210-R16NWP	23H3264-10	PCBs
P-211-R15CP	23H3264-11	PCBs
P-212-R11EP	23H3264-12	PCBs
P-213-R12CPB	23H3264-13	PCBs
P-214-R12CDW	23H3264-14	PCBs
P-215-R15CPW	23H3264-15	PCBs
P-216-R13CP	23H3264-16	PCBs
P-217-R11SDW	23H3264-17	PCBs
P-218-R13WT	23H3264-18	PCBs
P-219-R14EDW	23H3264-19	PCBs
P-220-S12C	23H3264-20	PCBs

A complete laboratory report was received for SDG 23H3264.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

3. **Calibration Issues**

   Not assessed for S2AVM.

4. **Lab and Field Blanks**

   PCBs: Results for the laboratory method blanks associated with the samples of this SDG were non-detect. No blank actions are required.

   An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

   Not assessed for S2AVM.

6. **Surrogates (PCBs only)**

   PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples and no actions are required.

7. **Laboratory Control Samples**

   PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pairs associated with the samples met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

   PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

   If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
   If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

   MS/MSD analyses were not performed for this SDG.

9. **Laboratory Duplicates**

   PCBs: Not applicable to this analysis.

10. **Serial Dilution (metals only)**

    PCBs: Not applicable to this analysis.

11. **Field Duplicate Precision**

    Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

    A field duplicate sample was not submitted with the samples of this SDG. No actions are required.

12. Internal Standards

Not applicable to these analyses.

13. Dual Column Precision (PCBs only)

Dual column precision criteria (≤ 25% RPD per NFG) were met for all Aroclor detections > QL except for the Aroclor 1248 detection in sample P-209-R16SP (23H3264-09), where the RPD was > 25% (25.6%). Based on the NFGs (2020), the detected result for Aroclor 1248 is qualified as estimated (J) in sample P-209-R16SP due to dual column imprecision.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results exceeded the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA, for several samples due to required sample dilutions. Dilutions ranged from 1/5 to 1/10. The QLs were greater than 1 mg/kg in samples requiring dilutions; however, note that some samples (23H3264-01, -03, -08, -09, -11, -14, and -16) were extracted using a larger volume of sample than the other samples in the SDG. While these samples also required dilutions, the QLs for these samples met the PAL due to the extra sample volume extracted.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

20/Building Material Samples: P-201, P-202, P-203-EX, P-204-R17W, P-205-R17W, P-206-R17W, P-207-R16C, P-208-R14SP, P-209-R16SP, P-210-R16NWP, P-211-R15CP, P-212-R11EP, P-213-R12CPB, P-214-R12CDW, P-215-R15CPW, P-216-R13CP, P-217-R11SDW, P-218-R13WT, P-219-R14EDW, P-220-S12C

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on August 16, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) for St. Johnsbury Armory, which appends the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
*	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
NA	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that quantitation limits for non-detect results exceeded the project action limit (PAL) of ≤ 1 mg/kg for total PCBs in several samples due to required sample dilutions.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Linda Terzis

Project #: S00001.017
Case#: NA
Date: 10/02/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23H3265
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) building material samples were listed on the COC for SDG 23H3265. The samples were collected on 08/16/2023 and were received at the laboratory on 08/22/2023 at temperatures ranging from 2.2 to 5.6 °C.

Sample ID	Laboratory ID	Analyses
P-221-R15WT	23H3265-01	PCBs
P-222-R16NP	23H3265-02	PCBs
P-223-S12N	23H3265-03	PCBs
P-224-R23C	23H3265-04	PCBs
P-225-R13S	23H3265-05	PCBs
P-226-R14SDW	23H3265-06	PCBs
P-227-R14-EP	23H3265-07	PCBs
P-228-R12WT	23H3265-08	PCBs
P-229-R14CDW	23H3265-09	PCBs
P-230-R13CWP	23H3265-10	PCBs
P-231-R11CP	23H3265-11	PCBs
P-232-R13F	23H3265-12	PCBs
P-233-R13E	23H3265-13	PCBs
P-234-R12F	23H3265-14	PCBs
P-235-R25D	23H3265-15	PCBs
P-236-R15S	23H3265-16	PCBs
P-237-R33NB	23H3265-17	PCBs
P-238-R35C	23H3265-18	PCBs
P-239-S01F	23H3265-19	PCBs
P-240-R13D	23H3265-20	PCBs

A complete laboratory report was received for SDG 23H3265.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blanks associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not assessed for S2AVM.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples except for those samples requiring dilutions. Surrogates were diluted out of samples with dilutions > 1/20. Sample dilutions ranged from 1/5 to 1/100. No actions are required.

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pairs associated with the samples met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed on samples P-225-R13S (23H3265-05) and P-237-R33NB (23H3265-17).

Percent recoveries of Aroclors 1016 and 1260 exceeded the Program QAPP limits of 40-140% in the MS and MSD analyses of P-225-R13S on both analytical columns except for the recovery of Aroclor 1016, which was within the limits on the primary column (140%). RPDs were < 30%, as specified in the Program QAPP. The laboratory indicated the percent recoveries were high due to the contribution of other Aroclors (i.e., Aroclor 1254) in the parent sample. No action is taken.

Percent recoveries of Aroclor 1260 exceeded the Program QAPP limits of 40-140% in the MS and MSD analyses of P-237-R33NB on both analytical columns. RPDs were < 30%, as specified in the Program QAPP. The laboratory indicated the percent recoveries were high due to the contribution of other Aroclors (i.e., Aroclor 1254) in the parent sample. No action is taken. Aroclor 1016 was not recovered in this MS/MSD pair due to the required sample dilution below spike reporting limit. Note that a lower sample volume was extracted for this parent sample than for parent sample P-225-R13S, above, and therefore, the reporting limit for parent sample P-237-R33NB was higher even though both parent samples required 1/50 dilutions. No action is taken.

9. **Laboratory Duplicates**

PCBs: Not applicable to this analysis.

10. **Serial Dilution (metals only)**

PCBs: Not applicable to this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

A field duplicate sample was not submitted with the samples of this SDG. No actions are required.

12. **Internal Standards**

Not applicable to these analyses.

13. **Dual Column Precision (PCBs only)**

Dual column precision criteria (≤ 25% RPD per NFG) were met for all Aroclor detections > QL and no actions are required.

14. **Performance Evaluation (PE) Samples**

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. **Quantitation Limits**

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results exceeded the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA, for several samples due to required sample dilutions. Dilutions ranged from 1/5 to 1/100. The QLs were greater than 1 mg/kg in samples requiring dilutions; however, note that samples 23H3265-11 and 23H3265-14 were extracted using a larger volume of sample than the other samples in the SDG. While these samples also required dilutions, the QLs for these samples meet the PAL due to the extra sample volume extracted.

16. **Other**

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

20/Building Material Samples: P-241-R37C, P-242-R12-CP, P-243-R12NDW, P-244-R12EDW, P-245-R35S, P-246-R36C, P-247-R12NP, P-248-R11WT, P-249-R14WP, P-250-R11D, P-251-R12EW, P-252-R17S, P-253-R15D, P-254-R11CDW, P-255-R14SP, P-256-R24D, P-257-S12S, P-258-R11WDW, P-259-R15E, P-260-R34E
1/Field Duplicate Pair: P-252-R17S / P-FD-14 (located in SDG 23H3270)

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on August 14, and August 16, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) for St. Johnsbury Armory, which appends the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	• Overall Evaluation of Data and Potential Usability Issues
*	• Data Completeness
*	• Preservation and Technical Holding Times
*	• Blanks
*	• Surrogates (PCBs only)
NA	• Internal Standards
*	• Matrix Spike Analysis

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
*	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
	•	Target Analyte Identification
	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that quantitation limits for non-detect results exceeded the project action limit (PAL) of ≤ 1 mg/kg for total PCBs in several samples due to required sample dilutions.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Results were qualified due to dual column imprecision.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 10/03/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23H3267
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) building material samples, including one field duplicate sample, were listed on the COC for SDG 23H3267. The samples were collected on 08/14/2023 and 08/16/2023 and were received at the laboratory on 08/22/2023 at temperatures ranging from 2.2 to 5.6 °C.

Sample ID	Laboratory ID	Analyses
P-241-R37C	23H3267-01	PCBs
P-242-R12-CP	23H3267-02	PCBs
P-243-R12NDW	23H3267-03	PCBs
P-244-R12EDW	23H3267-04	PCBs
P-245-R35S	23H3267-05	PCBs
P-246-R36C	23H3267-06	PCBs
P-247-R12NP	23H3267-07	PCBs
P-248-R11WT	23H3267-08	PCBs
P-249-R14WP	23H3267-09	PCBs
P-250-R11D	23H3267-10	PCBs
P-251-R12EW	23H3267-11	PCBs
P-252-R17S	23H3267-12	PCBs
P-253-R15D	23H3267-13	PCBs
P-254-R11CDW	23H3267-14	PCBs
P-255-R14SP	23H3267-15	PCBs
P-256-R24D	23H3267-16	PCBs
P-257-S12S	23H3267-17	PCBs
P-258-R11WDW	23H3267-18	PCBs
P-259-R15E	23H3267-19	PCBs
P-260-R34E	23H3267-20	PCBs

A complete laboratory report was received for SDG 23H3267.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blanks associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not assessed for S2AVM.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples except where required sample dilutions caused the surrogates to dilute out of the samples. Dilution factors ranged from 1/5 to 1/50. Surrogates were diluted out of samples that had sample dilutions > 1/20. No actions are required.

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pairs associated with the samples met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed on samples P-257-S12S (23H3267-17), P-258-R11WDW (23H3267-18), and P-259-R15E (23H3267-19).

Percent recoveries of Aroclors 1016 and 1260 exceeded the Program QAPP limits of 40-140% in the MS and MSD analyses of samples P-257-S12S and P-259-R15E on both analytical columns. RPDs met the < 30% limit, as specified in the Program QAPP. The laboratory indicated the percent recoveries were high due to the contribution of other Aroclors (i.e., Aroclor 1254) in the parent samples. No action is taken.

Percent recoveries of Aroclors 1016 and 1260 exceeded the Program QAPP limits of 40-140% in the MS and MSD analyses of samples P-258-R11WDW on both analytical columns. RPDs exceeded the < 30% limit, as specified in the Program QAPP. The laboratory indicated the percent recoveries were high due to the contribution of other Aroclors (i.e., Aroclor 1254) in the parent samples. No action is taken.

9. Laboratory Duplicates

PCBs: Not applicable to this analysis.

10. Serial Dilution (metals only)

PCBs: Not applicable to this analysis.

11. Field Duplicate Precision

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

The following field duplicate pair is associated with the samples of this SDG.

- P-252-R17S / P-FD-14 (23H3267-12 / 23H3270-08)

PCBs: Aroclor results met field duplicate precision criteria and no action is required.

12. Internal Standards

Not applicable to these analyses.

13. Dual Column Precision (PCBs only)

Dual column precision criteria (≤ 25% RPD per the NFGs) were met for all Aroclor detections > QL except for the Aroclor 1248 detections in samples P-254-R11CDW (23H3267-14) and P-256-R24D (23H3267-16), and the Aroclor 1254 detection in sample P-254-R11CDW (23H3267-14), where RPDs were > 25%. Based on the NFGs (2020), the detected results for Aroclor 1248 are qualified as estimated (J) in samples P-254-R11CDW and P-256-R24D, and the Aroclor 1254 detection in sample P-254-R11CDW was qualified as estimated (J) due to dual column imprecision.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results exceeded the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA, for several samples due to required sample dilutions. Dilutions ranged from 1/5 to 1/50.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on August 14 through August 17, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) for St. Johnsbury Armory, which appends the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

* • Overall Evaluation of Data and Potential Usability Issues
* • Data Completeness
* • Preservation and Technical Holding Times

Nobis Group®

	•	Target Analyte Identification
	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that quantitation limits for non-detect results exceeded the project action limit (PAL) of ≤ 1 mg/kg for total PCBs in several samples due to required sample dilutions.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Results were qualified due to dual column and field duplicate imprecision.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 10/03/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23H3268
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Fourteen (14) building material samples and six (6) field duplicate samples were listed on the COC for SDG 23H3268. The samples were collected on 08/14/2023 through 08/17/2023 and were received at the laboratory on 08/22/2023 at temperatures ranging from 2.2 to 5.6 °C.

Sample ID	Laboratory ID	Analyses
P-261-R34S	23H3268-01	PCBs
P-262-EX	23H3268-02	PCBs
P-263-EX	23H3268-03	PCBs
P-264-EX	23H3268-04	PCBs
P-265-R17EC1	23H3268-05	PCBs
P-266-R17EC2	23H3268-06	PCBs
P-267-R17EC3	23H3268-07	PCBs
P-268-R17EC4	23H3268-08	PCBs
P-269-R23SS	23H3268-09	PCBs
P-270-R27SS	23H3268-10	PCBs
P-271-R25ASS	23H3268-11	PCBs
P-272-R21SS	23H3268-12	PCBs
P-273-R31SS	23H3268-13	PCBs
P-274-S12R	23H3268-14	PCBs
P-FD-01	23H3268-15	PCBs
P-FD-02	23H3268-16	PCBs
P-FD-03	23H3268-17	PCBs
P-FD-04	23H3268-18	PCBs
P-FD-05	23H3268-19	PCBs
P-FD-06	23H3268-20	PCBs

A complete laboratory report was received for SDG 23H3268.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blanks associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not assessed for S2AVM.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples except where required sample dilutions caused the surrogates to dilute out of the samples. Dilution factors ranged from 1/10 to 1/50. Surrogates were diluted out of samples that had sample dilutions > 1/20. No actions are required.

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pairs associated with the samples met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed on samples P-264-EX (23H3268-04) and P-270-R27SS (23H3268-10).

Percent recoveries of Aroclors 1016 and 1260 exceeded the Program QAPP limits of 40-140% in the MS and MSD analyses of sample P-264-EX on both analytical columns. RPDs met the < 30% limit, as specified in the Program QAPP, for Aroclor 1016 recoveries; RPDs for the Aroclor 1260 recoveries exceeded 30%. The laboratory indicated the percent recoveries were high due to the contribution of other Aroclors (i.e., Aroclor 1254) in the parent sample. No action is taken.

Percent recoveries of Aroclors 1016 and 1260 were within the Program QAPP limits of 40-140% in the MS and MSD analyses of samples P-270-R27SS on both analytical columns. RPDs met the < 30% limit, as specified in the Program QAPP. No actions are required.

9. **Laboratory Duplicates**

PCBs: Not applicable to this analysis.

10. Serial Dilution (metals only)

PCBs: Not applicable to this analysis.

11. Field Duplicate Precision

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

The following field duplicate pairs are associated with the samples of this SDG.

- P-263-EX / P-FD-09 (23H3268-03 / 23H3270-03)
- P-269-R23SS / P-FD-15 (23H3268-09 / 23H3270-09)

PCBs: Aroclor results met field duplicate precision criteria and no action is required.

In addition, the following field duplicate samples, evaluated in other SDGs, are associated with the samples of this SDG:

- P-FD-01 / P-018-R06E (23H3268-15 / 23H3248-18) – evaluated in SDG 23H3248. Field duplicate precision met and no actions required.
- P-FD-02 / P-040-R09W (23H3268-16 / 23H3250-20) – evaluated in SDG 23H3250. Field duplicate precision met and no actions required.
- P-FD-03 / P-065-S01C (23H3268-17 / 23H3255-05) – evaluated in SDG 23H3255. Results for Aroclors 1248 and 1254 qualified as estimated (J/UJ) in samples P-065-S01C and P-066-S01C (located in SDG 23H3255), and FD-03 (located in this SDG), due to field duplicate imprecision.
- P-FD-04 / P-111-R28SC (23H3268-18 / 23H3257-11) – evaluated in SDG 23H3257. Field duplicate precision met and no actions required.
- P-FD-05 / P-127-R33NC (23H3268-19 / 23H3258-07) – evaluated in SDG 23H3258. Field duplicate precision met and no actions required.
- P-FD-06 / P-133-R16EP (23H3268-20 / 23H3258-13) – evaluated in SDG 23H3258. Field duplicate precision met and no actions are required.

Field duplicate precision evaluations for the field duplicate pairs above are included in the attachments of this data validation report.

12. Internal Standards

Not applicable to these analyses.

13. Dual Column Precision (PCBs only)

Dual column precision criteria (≤ 25% RPD per the NFGs) were met for all Aroclor detections > QL except for the Aroclor 1254 detections in samples P-266-R17EC2 (23H3268-06) and P-FD-01 (23H3268-15), and the Aroclor 1248 detection in sample P-FD-03 (23H3268-17), where RPDs were > 25%. Based on the NFGs (2020), the detected results for Aroclor 1254 are qualified as

estimated (J) in samples P-266-R17EC2 and P-FD-01, and the Aroclor 1248 detection in sample P-FD-03 was qualified as estimated (J) due to dual column imprecision. Note that result for Aroclor 1248 in sample P-FD-03 is also qualified as estimated (J) due to field duplicate imprecision, as previously discussed above.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results exceeded the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA, for several samples due to required sample dilutions. Dilutions ranged from 1/10 to 1/50.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

9/Field Duplicate Pairs: P-146-EWP2 / P-FD-07 (23H3259-06 / 23H3270-01), P-158-R11EDW / P-FD-08 (23H3259-18 / 23H3270-02), P-263-EX / P-FD-09 (23H3268-03 / 23H3270-03), P-176-EX / P-FD-10 (23H3260-16 / 23H3270-04), P-131-R37S / P-FD-11 (23H3258-11 / 23H3270 - 05), P-003-R03W / P-FD-12 (23H3248-03 / 23H3270-06), P-009-R04W / P-FD-13 (23H3248-09 / 23H3270-07), P-252-R17S / P-FD-14 (23H3267-12 / 23H3270-08), P-269-R23SS / P-FD-15 (23H3268-09 / 23H3270-09)

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on August 14 through August 17, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) for St. Johnsbury Armory, which appends the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

* • Overall Evaluation of Data and Potential Usability Issues
* • Data Completeness
* • Preservation and Technical Holding Times
* • Blanks

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

*	•	Surrogates (PCBs only)

NA	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
	•	Target Analyte Identification
	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that quantitation limits for non-detect results exceeded the project action limit (PAL) of ≤ 1 mg/kg for total PCBs in several samples due to required sample dilutions.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Results were qualified due to dual column and field duplicate imprecision.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Linda Terzis

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 10/03/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23H3270
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Nine (9) field duplicate samples were listed on the COC for SDG 23H3270. The samples were collected on 08/14/2023 through 08/17/2023 and were received at the laboratory on 08/22/2023 at temperatures ranging from 2.2 to 5.6 °C.

Sample ID	Laboratory ID	Analyses
P-FD-07	23H3270-01	PCBs
P-FD-08	23H3270-02	PCBs
P-FD-09	23H3270-03	PCBs
P-FD-10	23H3270-04	PCBs
P-FD-11	23H3270-05	PCBs
P-FD-12	23H3270-06	PCBs
P-FD-13	23H3270-07	PCBs
P-FD-14	23H3270-08	PCBs
P-FD-15	23H3270-09	PCBs

A complete laboratory report was received for SDG 23H3270.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blanks associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

5. **Interference Check Sample (metals only)**

   Not assessed for S2AVM.

6. **Surrogates (PCBs only)**

   PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples except where required sample dilutions caused the surrogates to dilute out of the samples. Dilution factors ranged from 1/4 to 1/50. Surrogates were diluted out of samples that had sample dilutions > 1/20. No actions are required.

7. **Laboratory Control Samples**

   PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pairs associated with the samples met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

   PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

   If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
   If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

   MS/MSD analyses were not performed on samples of this SDG. No action is required.

9. **Laboratory Duplicates**

   PCBs: Not applicable to this analysis.

10. **Serial Dilution (metals only)**

    PCBs: Not applicable to this analysis.

11. **Field Duplicate Precision**

    Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

    The following field duplicate pairs, evaluated in other SDGS, are associated with the samples of this site.

    - P-146-EWP2 / P-FD-07 (23H3259-06 / 23H3270-01) – evaluated in SDG 23H3259. Field duplicate precision met and no actions required.
    - P-158-R11EDW / P-FD-08 (23H3259-18 / 23H3270-02) – evaluated in SDG 23H3259. Aroclor 1248 results qualified as estimated (J/UJ) in the field duplicate pair samples due to field duplicate imprecision.
    - P-263-EX / P-FD-09 (23H3268-03 / 23H3270-03) – evaluated in SDG 23H3268. Field duplicate criteria met and no actions required.

- P-176-EX / P-FD-10 (23H3260-16 / 23H3270-04) – evaluated in SDG 23H3260. Field duplicate precision met and no actions required.
- P-131-R37S / P-FD-11 (23H3258-11 / 23H3270 -05) – evaluated in SDG 23H3258. Field duplicate criteria met and no actions required.
- P-003-R03W / P-FD-12 (23H3248-03 / 23H3270-06) – evaluated in SDG 23H3248. Field duplicate precision met and no actions required.
- P-009-R04W / P-FD-13 (23H3248-09 / 23H3270-07) – evaluated in SDG 23H3248. Field duplicate precision met and no actions required.
- P-252-R17S / P-FD-14 (23H3267-12 / 23H3270-08) – evaluated in SDG 23H3267. Field duplicate precision met and no actions are required.
- P-269-R23SS / P-FD-15 (23H3268-09 / 23H3270-09) – evaluated in SDG 23H3268. Field duplicate precision met and no actions are required.

Field duplicate precision evaluations for the field duplicate pairs above are included in the attachments of this data validation report.

12. Internal Standards

Not applicable to these analyses.

13. Dual Column Precision (PCBs only)

Dual column precision criteria (≤ 25% RPD per the NFGs) were met for all Aroclor detections > QL except for the Aroclor 1254 detection in sample P-FD-013 (23H3270-07), where the RPD was > 25% (30%). Based on the NFGs (2020), the detected result for Aroclor 1254 in sample P-FD-13 is qualified as estimated (J) due to dual column imprecision. Note that result for Aroclor 1248 in sample P-FD-03 is also qualified as estimated (J) due to field duplicate imprecision, as previously discussed above.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results exceeded the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA, for several samples due to required sample dilutions. Dilutions ranged from 1/4 to 1/50.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Polychlorinated Biphenyls (PCBs by 8082A):

9/Caulk Samples: P-275-EX, P-276-EX, P-277-EX, P-278-EX, P-279-EX, P-280-EX, P-281-EX, P-282-EX, P-283-EX
11/Building Material Samples: P-284-R6, P-285-R6, P-286-R10, P-287-R13, P-288-R13, P-289-R14, P-290-R12, P-291-R12, P-292-R12, P-293-R18, P-294-R18
2/Field Duplicate Pairs: P-286-R10 / P-FD-016 (23J0273-12 / 23J0277-05) and P-289-R14 / P-FD-017 (23J0273-15 / 23J0277-06)

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on October 2, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

* • Overall Evaluation of Data and Potential Usability Issues
* • Data Completeness
* • Preservation and Technical Holding Times
* • Blanks

Nobis Group®

NA	•	Performance Evaluation (PE) Samples
	•	Target Analyte Identification
	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that quantitation limits for non-detect results exceeded the project action limit (PAL) of ≤ 1 mg/kg for total PCBs in 3 building material samples and 2 caulk samples due to required sample dilutions.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Results were qualified due to dual column imprecision.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Nine (9) caulk samples and eleven (11) building material samples were listed on the COC for SDG 23J0273. The samples were collected on 10/02/2023 and were received at the laboratory on 10/03/2023 at 3.2 °C.

Sample ID	Matrix	Laboratory ID	Analyses
P-275-EX	Caulk	23J0273-01	PCBs
P-276-EX	Caulk	23J0273-02	PCBs
P-277-EX	Caulk	23J0273-03	PCBs

P-293-R18	Building Material	23J0273-19	PCBs
P-294-R18	Building Material	23J0273-20	PCBs

A complete laboratory report was received for SDG 23J0273.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material and caulk samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blanks associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples except samples P-293-R18 (23J0273-19) and P-294-R18 (23J0273-20), where the surrogates diluted out due to the high dilutions required (1/10,000) to report the high concentrations of Aroclor 1254 detected in the samples. No actions are required.

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in all PCB LCS/LCSD pairs met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

MS/MSD analyses were not performed for this SDG. No actions are required.

9. **Laboratory Duplicates**

Not applicable for this analysis.

10. **Serial Dilution (metals only)**

Not applicable for this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

The following field duplicate pairs are associated with the samples of this SDG.

- P-286-R10 / P-FD-016 (23J0273-12 / 23J0277-05)
- P-289-R14 / P-FD-017 (23J0273-15 / 23J0277-06)

PCBs: Field duplicate precision criteria were met for both field duplicate pairs. No actions are required.

12. Internal Standards

Not applicable for this analysis.

13. Dual Column Precision (PCBs only)

Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) were met for all Aroclor detections except for the Aroclor 1254 detection in sample P-285-R6 (23J0273-11), where the RPD was 25.6%. Based on the NFGs (2020), the detected Aroclor 1254 result in sample P-285-R6 is qualified as estimated (J) due to dual column imprecision.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results exceeded the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA, for 3 building material and 2 caulk samples due to required sample dilutions. Dilutions ranged from 1/20 to 1/10,000. Site objectives may be impacted.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material and caulk samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Pace Analytical (formerly Con-test), East Longmeadow, MA

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

6/Building Material Samples: P-295-R18, P-296-R15, P-297-R15, P-298-R15, P-FD-016, P-FD-017
2/Field Duplicate Pairs: P-286-R10 / P-FD-016 (23J0273-12 / 23J0277-05) and P-289-R14 / P-FD-017 (23J0273-15 / 23J0277-06)

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on October 2, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	• Overall Evaluation of Data and Potential Usability Issues
*	• Data Completeness
*	• Preservation and Technical Holding Times
*	• Blanks
*	• Surrogates (PCBs only)
NA	• Internal Standards
*	• Matrix Spike Analysis

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
*	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
	•	Target Analyte Identification
	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that quantitation limits for non-detect results exceeded the project action limit (PAL) of ≤ 1 mg/kg for total PCBs in 1 building material sample due to the required sample dilution.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Results were qualified due to dual column imprecision.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Linda Terzis

PCBs					
	Aroclor 1254	P-FD-017	Dual column imprecision	J	

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/13/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23J0277
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Six (6) building material samples, including 2 field duplicate samples, were listed on the COC for SDG 23J0277. The samples were collected on 10/02/2023 and were received at the laboratory on 10/03/2023 at 3.2 °C.

Sample ID	Laboratory ID	Analyses
P-295-R18	23J0277-01	PCBs
P-296-R15	23J0277-02	PCBs
P-297-R15	23J0277-03	PCBs
P-298-R15	23J0277-04	PCBs
P-FD-016	23J0277-05	PCBs
P-FD-017	23J0277-06	PCBs

A complete laboratory report was received for SDG 23J0277.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples except sample P-295-R18 (23J0277-1), where the surrogates diluted out due to the high dilution required (1/10,000) to report the high concentrations of Aroclor 1254 detected in the sample. No actions are required.

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed on sample P-296-R15 (23J0277-2).

Percent recoveries of Aroclors 1016 and 1260 exceeded the Program QAPP limits of 40-140% in the MS and MSD analyses on both analytical columns. Professional judgement based on the NFGs (2020) and the EPA Region 1 Supplement (2020) was used to accept the non-detect results for Aroclors 1016, 1221, 1232, and 1242 unqualified since the potential bias is high. The recoveries of Aroclor 1260 likely exceeded the 40-140% limits in the MS/MSD analyses due to the presence of high concentrations of Aroclor 1254 detected in the parent sample. Therefore, no action is taken for the exceeded MS/MSD criteria. The RPDs were ≤ 30%, as specified in the Program QAPP.

9. **Laboratory Duplicates**

Not applicable for this analysis.

10. **Serial Dilution (metals only)**

Not applicable for this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

The following field duplicate pairs are associated with the samples of this SDG.

- P-286-R10 / P-FD-016 (23J0273-12 / 23J0277-05)
- P-289-R14 / P-FD-017 (23J0273-15 / 23J0277-06)

PCBs: Field duplicate precision criteria were met for both field duplicate pairs. No actions are required.

12. Internal Standards

Not applicable for this analysis.

13. Dual Column Precision (PCBs only)

Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) were met for all Aroclor detections except for the Aroclor 1254 detection in sample P-FD-017 (23J0277-06), where the RPD was 28.2%. Based on the NFGs, the detected Aroclor 1254 result in sample P-FD-017 is qualified as estimated (J) due to dual column imprecision.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results exceeded the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA, for 1 sample due to the required sample dilution of 1/10,000. Site objectives may be impacted.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Sample Delivery Group (SDG) No. 23J4090

Pace Analytical (formerly Con-test), East Longmeadow, MA

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

7/Building Material Samples: P-299-EX, P-300-EX, P-301-EX, P-302-EX, P-303-EX, P-304-EX, P-FD-018
1/Field Duplicate Pair: P-304-EX / P-FD-018

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on October 25, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
NA	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
*	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Linda Terzis

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/13/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23J4090
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Seven (7) building material samples, including one field duplicate sample, were listed on the COC for SDG 23J4090. The samples were collected on 10/25/2023 and were received at the laboratory on 10/31/2023 at 2.0 °C.

Sample ID	Laboratory ID	Analyses
P-299-EX	23J4090-01	PCBs
P-300-EX	23J4090-02	PCBs
P-301-EX	23J4090-03	PCBs
P-302-EX	23J4090-04	PCBs
P-303-EX	23J4090-05	PCBs
P-304-EX	23J4090-06	PCBs
P-FD-018	23J4090-07	PCBs

A complete laboratory report was received for SDG 23J4090.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

Surrogates (PCBs only)

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples. No actions are required.

6. Laboratory Control Samples

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

7. Matrix Spikes

MS/MSD analyses were not performed for this SDG. No actions are required.

8. Laboratory Duplicates

Not applicable for this analysis.

9. Serial Dilution (metals only)

Not applicable for this analysis.

10. Field Duplicate Precision

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

The following field duplicate pair is associated with the samples of this SDG.

- P-304-EX / P-FD-018 (23J4090-06 / 23J4090-018)

PCBs: Field duplicate precision criteria were met. No actions are required.

11. Internal Standards

Not applicable for this analysis.

12. Dual Column Precision (PCBs only)

PCB results were non-detect in all samples. Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) were met and no actions are required.

13. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

14. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

15. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Tier 1 Stage 1 Inorganic Data Review

Toxicity Characteristic Leaching Procedure (TCLP) Lead by (1311/6010D):

6/Building Material Samples: WC-LEAD-COMP-1, WC-LEAD-COMP-2, WC-LEAD-COMP-3, WC-LEAD-COMP-4, WC-LEAD-COMP-5, WC-LEAD-COMP-FIELD DUP
1/Field Duplicate Pair: WC-LEAD-COMP-5 / WC-LEAD-COMP-FIELD DUP

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1/Stage 1 manual data review (S1VM) on the inorganic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on October 25, 2023. The samples were analyzed for TCLP Lead by EPA Methods 1311/6010D by Pace Analytical (formerly Con-test).

The Tier 1/Stage 1 manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Inorganic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

* • Overall Evaluation of Data and Potential Usability Issues
* • Data Completeness
* • Preservation and Technical Holding Times
* • Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

TCLP Lead:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

WC-LEAD-COMP-5	23J4095-05	TCLP Lead
WC-LEAD-COMP-FIELD DUP	23J4095-06	TCLP Lead

A complete laboratory report was received for SDG 23J4095.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

TCLP Lead: Holding time limits are not applicable for building material samples; however, the samples were prepared and analyzed within 16 days of collection. Soil holding time for leaching and analysis is 180 days from collection. No actions are required.

3. **Calibration Issues**

Not assessed for S1VM validation.

4. **Lab and Field Blanks**

Not assessed for S1VM validation.

5. **Interference Check Sample (metals only)**

Not assessed for S1VM validation.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

6. **Surrogates (PCBs only)**

   Not applicable for this analysis.

7. **Laboratory Control Samples**

   Not assessed for S1VM validation.

8. **Matrix Spikes**

   Not assessed for S1VM validation.

9. **Laboratory Duplicates**

   Not assessed for S1VM validation

10. **Serial Dilution (metals only)**

    Not assessed for S1VM validation.

11. **Field Duplicate Precision**

    Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

    Field duplicate pair WC-LEAD-COMP-5 / WC-LEAD-COMP-FIELD DUP is associated with the samples of this SDG.

    Not assessed for S1VM validation.

12. **Internal Standards**

    Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

    Not applicable for this analysis.

14. **Performance Evaluation (PE) Samples**

    Not assessed for S1VM validation.

15. **Quantitation Limits**

    A project action level (PAL) for TCLP lead for waste characterization was not specified in the Program QAPP or QAPPAs for the site. Laboratory quantitation limits (QLs) for TCLP lead are 0.1 mg/L. Note there are no non-detect results for TCLP lead in the samples. No actions are required.

16. **Other**

    The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

St. Johnsbury, Vermont
Sample Delivery Group (SDG) No. 23K0792

Pace Analytical (formerly Con-test), East Longmeadow, MA

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

2/Soil Samples: P-305-EX-000.5, P-306-EX-000.5

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. Note that 18 soil samples included on the COC were placed on hold and therefore, two samples were analyzed and included in this SDG for review. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 1, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
NA	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

NA	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/06/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23K0792
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) soil samples were listed on the COC for SDG 23K0792. Eighteen (18) of the samples were placed on hold and two samples were scheduled for analysis. The samples were collected on 11/01/2023 and were received at the laboratory on 11/06/2023 at 2.5 °C.

Sample ID	Laboratory ID	Analyses
P-305-EX-000.5	23K0792-01	PCBs
P-306-EX-000.5	23K0792-14	PCBs

A complete laboratory report was received for SDG 23K0792.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Samples were extracted within 14 days of collection and analyzed within 40 days of extraction, as specified on Table 2-6-1 of the Program Quality Assurance Project Plan (QAPP) for the St. Johnsbury Armory site (October 2022). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples. No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

7. **Laboratory Control Samples**

   PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

   MS/MSD analyses were not performed for this SDG. No actions are required.

9. **Laboratory Duplicates**

   Not applicable for this analysis.

10. **Serial Dilution (metals only)**

    Not applicable for this analysis.

11. **Field Duplicate Precision**

    Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

    Field duplicate samples were not submitted with the samples of this SDG. No action is required.

12. **Internal Standards**

    Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

    Sample results for PCBs were all non-detect. Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) and no actions are required.

14. **Performance Evaluation (PE) Samples**

    A PE sample was not submitted with the samples of this SDG. No actions are required.

15. **Quantitation Limits**

    PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. **Other**

    The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples was met for both samples.

    Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

2/Soil Samples: P-307-EX-000.5, P-308-EX-000.5

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. Note that 18 soil samples included on the COC were placed on hold and therefore, two samples were analyzed and included in this SDG for review. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 1, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
NA	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

NA	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/06/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23K0793
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) soil samples were listed on the COC for SDG 23K0793. Eighteen (18) of the samples were placed on hold and two samples were scheduled for analysis. The samples were collected on 11/01/2023 and were received at the laboratory on 11/06/2023 at 2.5, 2.8 and 2.9 °C.

Sample ID	Laboratory ID	Analyses
P-307-EX-000.5	23K0793-07	PCBs
P-308-EX-000.5	23K0793-20	PCBs

A complete laboratory report was received for SDG 23K0793.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Samples were extracted within 14 days of collection and analyzed within 40 days of extraction, as specified on Table 2-6-1 of the Program Quality Assurance Project Plan (QAPP) for the St. Johnsbury Armory site (October 2022). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples. No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

MS/MSD analyses were not performed for this SDG. No actions are required.

9. **Laboratory Duplicates**

Not applicable for this analysis.

10. **Serial Dilution (metals only)**

Not applicable for this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

Field duplicate samples were not submitted with the samples of this SDG. No action is required.

12. **Internal Standards**

Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) were met for the Aroclor 1254 detection in sample P-308-EX-000.5 (23K0793-20). No actions are required.

14. **Performance Evaluation (PE) Samples**

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. **Quantitation Limits**

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. **Other**

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples was met for both samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Re: USEPA Contract No. 68HE0122D0001
USEPA Task Order No. 68HE0122F0044
Targeted Brownfield Assessment (TBA) Site
St. Johnsbury Armory Site
St. Johnsbury, Vermont
Sample Delivery Group (SDG) No. 23K0794

Pace Analytical (formerly Con-test), East Longmeadow, MA

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

1/Soil Sample: P-309-EX-000.5

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the sample listed above. Note that 19 soil samples included on the COC were placed on hold and therefore, one sample was analyzed and included in this SDG for review. The sample was collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 1, 2023. The sample was analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
NA	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

NA	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/06/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23K0794
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) soil samples were listed on the COC for SDG 23K0794. Nineteen (19) of the samples were placed on hold and one sample was scheduled for analysis. The samples were collected on 11/01/2023 and were received at the laboratory on 11/06/2023 at 2.8 and 2.9 °C.

Sample ID	Laboratory ID	Analyses
P-309-EX-000.5	23K0794-13	PCBs

A complete laboratory report was received for SDG 23K0794.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: The sample was extracted within 14 days of collection and analyzed within 40 days of extraction, as specified on Table 2-6-1 of the Program Quality Assurance Project Plan (QAPP) for the St. Johnsbury Armory site (October 2022). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the sample of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for the sample of this SDG. No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

7. **Laboratory Control Samples**

   PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

   MS/MSD analyses were not performed for this SDG. No actions are required.

9. **Laboratory Duplicates**

   Not applicable for this analysis.

10. **Serial Dilution (metals only)**

    Not applicable for this analysis.

11. **Field Duplicate Precision**

    Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

    Field duplicate samples were not submitted with the sample of this SDG. No action is required.

12. **Internal Standards**

    Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

    Sample results for PCBs were all non-detect. Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) are met and no actions are required.

14. **Performance Evaluation (PE) Samples**

    A PE sample was not submitted with the samples of this SDG. No actions are required.

15. **Quantitation Limits**

    PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. **Other**

    The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples was met for both samples.

    Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Re: USEPA Contract No. 68HE0122D0001
USEPA Task Order No. 68HE0122F0044
Targeted Brownfield Assessment (TBA) Site
St. Johnsbury Armory Site
St. Johnsbury, Vermont
Sample Delivery Group (SDG) No. 23K0795

Pace Analytical (formerly Con-test), East Longmeadow, MA

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

2/Soil Samples: P-FD028, P-FD029
2/Field Duplicate Pairs: P-319-EX-000.5 (in SDG 23K0808) / P-FD028 and P-321-EX-000.5 (in SDG 23K0805) / P-FD029

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. Note that 9 soil samples included on the COC were placed on hold and therefore, two samples were analyzed and included in this SDG for review. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 1 and 2, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
NA	•	Matrix Spike Analysis

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
*	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Linda Terzis

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/06/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23K0795
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Nine (9) soil samples were listed on the COC for SDG 23K0795. Seven (7) of the samples were placed on hold and two samples were scheduled for analysis. The samples were collected on 11/01/2023 and 11/02/2023 and were received at the laboratory on 11/06/2023 at 2.5 °C.

Sample ID	Laboratory ID	Analyses
P-FD028	23K0795-03	PCBs
P-FD029	23K0795-04	PCBs

A complete laboratory report was received for SDG 23K0795.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Samples were extracted within 14 days of collection and analyzed within 40 days of extraction, as specified on Table 2-6-1 of the Program Quality Assurance Project Plan (QAPP) for the St. Johnsbury Armory site (October 2022). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples. No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

MS/MSD analyses were not performed for this SDG. No actions are required.

9. **Laboratory Duplicates**

Not applicable for this analysis.

10. **Serial Dilution (metals only)**

Not applicable for this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

The following field duplicate pairs are associated with the samples of this SDG.

- P-319-EX-000.5 / P-FD028 (23K0808-03 / 23K0795-03)
- P-321-EX-000.5 / P-FD029 (23K0805-09 / 23K0795-04)

PCBs: Field duplicate precision criteria were met for both field duplicate pairs. No actions are required.

12. **Internal Standards**

Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) were met for the Aroclor 1254 detection in sample P-FD029 (23K0795-04). No actions are required.

14. **Performance Evaluation (PE) Samples**

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. **Quantitation Limits**

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples was met for both samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

USEPA Task Order No. 68HE0122F0044
Targeted Brownfield Assessment (TBA) Site
St. Johnsbury Armory Site
St. Johnsbury, Vermont
Sample Delivery Group (SDG) No. 23K0796

Pace Analytical (formerly Con-test), East Longmeadow, MA

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

1/Soil Sample: P-FD024
1/Field Duplicate Pair: P-314-EX-000.5 (in SDG 23K0802) / P-FD024

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the sample listed above. Note that 19 soil samples included on the COC were placed on hold and therefore, one sample was analyzed and included in this SDG for review. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 1, 2023 and November 2, 2023. The sample was analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
NA	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
*	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Linda Terzis

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/06/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23K0796
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) soil samples were listed on the COC for SDG 23K0796. Nineteen (19) of the samples were placed on hold and one sample was scheduled for analysis. The samples were collected on 11/01/2023 and 11/02/2023, and were received at the laboratory on 11/06/2023 at 2.5 °C.

Sample ID	Laboratory ID	Analyses
P-FD024	23K0796-19	PCBs

A complete laboratory report was received for SDG 23K0796.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: The sample was extracted within 14 days of collection and analyzed within 40 days of extraction, as specified on Table 2-6-1 of the Program Quality Assurance Project Plan (QAPP) for the St. Johnsbury Armory site (October 2022). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the sample of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for the sample of this SDG. No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

MS/MSD analyses were not performed for this SDG. No actions are required.

9. **Laboratory Duplicates**

Not applicable for this analysis.

10. **Serial Dilution (metals only)**

Not applicable for this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

The following field duplicate pair is associated with the samples of this SDG.

- P-314-EX-000.5 / P-FD024 (23K0802-18 / 23K0796-19)

PCBs: Field duplicate precision criteria were met for the field duplicate pair. No actions are required.

12. **Internal Standards**

Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFG, 2020]) were met for the Aroclor 1254 detection in sample P-FD024 (23K0796-19). No actions are required.

14. **Performance Evaluation (PE) Samples**

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. **Quantitation Limits**

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples was met for the sample.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

2/Soil Samples: P-325-EX-000.5, P-326-EX-000.5

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. Note that 18 soil samples included on the COC were placed on hold and therefore, two samples were analyzed and included in this SDG for review. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 2, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
*	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)

Nobis Group®

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for the samples of this SDG. No actions are required.

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed on sample P-325-EX-000.5 (23K0797-01).

Percent recoveries of Aroclors 1016 and 1260 were within the Program QAPP limits of 40-140% in the MS and MSD analyses on both analytical columns. RPDs were ≤ 30%, as specified in the Program QAPP. No actions are required.

MS/MSD analyses were also performed on sample P-326-EX-000.5 (23K0797-14).

Percent recoveries of Aroclors 1016 and 1260 were within the Program QAPP limits of 40-140% in the MS and MSD analyses on both analytical columns. RPDs were ≤ 30%, as specified in the Program QAPP. No actions are required.

9. **Laboratory Duplicates**

Not applicable for this analysis.

10. **Serial Dilution (metals only)**

Not applicable for this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

Field duplicate samples were not submitted with this SDG. No actions are taken.

12. **Internal Standards**

Not applicable for this analysis.

13. Dual Column Precision (PCBs only)

Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) were met for the Aroclor 1254 detections in both samples. No actions are required.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples was met for the samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

December 18, 2023
Nobis File No. S00001.017

Ms. Christine Beling
USEPA - Region I
Land, Chemicals, and Redevelopment Division
5 Post Office Square, Suite 100
Boston, MA 02109-3912

Re: USEPA Contract No. 68HE0122D0001
USEPA Task Order No. 68HE0122F0044
Targeted Brownfield Assessment (TBA) Site
St. Johnsbury Armory Site
St. Johnsbury, Vermont
Sample Delivery Group (SDG) No. 23K0798

Pace Analytical (formerly Con-test), East Longmeadow, MA

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

2/Soil Samples: P-310-EX-000.5, P-311-EX-000.5

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. Note that 18 soil samples included on the COC were placed on hold and therefore, two samples were analyzed and included in this SDG for review. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 1, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
NA	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

NA	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Linda Terzis

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/11/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23K0798
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) soil samples were listed on the COC for SDG 23K0798. Eighteen (18) of the samples were placed on hold and two samples were scheduled for analysis. The samples were collected on 11/01/2023 and were received at the laboratory on 11/06/2023 at 2.8 and 2.9 °C.

Sample ID	Laboratory ID	Analyses
P-310-EX-000.5	23K0798-06	PCBs
P-311-EX-000.5	23K0798-19	PCBs

A complete laboratory report was received for SDG 23K0798.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: The samples were extracted within 14 days of collection and analyzed within 40 days of extraction, as specified on Table 2-6-1 of the Program Quality Assurance Project Plan (QAPP) for the St. Johnsbury Armory site (October 2022). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for the samples of this SDG. No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were not performed for this SDG. No actions are required.

9. **Laboratory Duplicates**

Not applicable for this analysis.

10. **Serial Dilution (metals only)**

Not applicable for this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

Field duplicate samples were not submitted with this SDG. No actions are taken.

12. **Internal Standards**

Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

There were no detected PCB Aroclor results in the samples. Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) are met and no actions are required.

14. **Performance Evaluation (PE) Samples**

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. **Quantitation Limits**

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples was met for the samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Re: USEPA Contract No. 68HE0122D0001
USEPA Task Order No. 68HE0122F0044
Targeted Brownfield Assessment (TBA) Site
St. Johnsbury Armory Site
St. Johnsbury, Vermont
Sample Delivery Group (SDG) No. 23K0799

Pace Analytical (formerly Con-test), East Longmeadow, MA

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

2/Soil Samples: P-327-EX-000.5, P-328-EX-0606.5

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. Note that 18 soil samples included on the COC were placed on hold and therefore, two samples were analyzed and included in this SDG for review. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 2, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
NA	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

NA	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/11/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23K0799
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) soil samples were listed on the COC for SDG 23K0799. Eighteen (18) of the samples were placed on hold and two samples were scheduled for analysis. The samples were collected on 11/02/2023 and were received at the laboratory on 11/06/2023 at 2.9 and 4.0 °C.

Sample ID	Laboratory ID	Analyses
P-327-EX-000.5	23K0799-07	PCBs
P-328-EX-0606.5	23K0799-20	PCBs

A complete laboratory report was received for SDG 23K0799.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: The samples were extracted within 14 days of collection and analyzed within 40 days of extraction, as specified on Table 2-6-1 of the Program Quality Assurance Project Plan (QAPP) for the St. Johnsbury Armory site (October 2022). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for the samples of this SDG. No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were not performed for this SDG. No actions are required.

9. **Laboratory Duplicates**

Not applicable for this analysis.

10. **Serial Dilution (metals only)**

Not applicable for this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

Field duplicate samples were not submitted with this SDG. No actions are taken.

12. **Internal Standards**

Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

There were no detected PCB Aroclor results in the samples. Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) are met and no actions are required.

14. **Performance Evaluation (PE) Samples**

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. **Quantitation Limits**

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples was met for the samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

1/Soil Sample: P-312-EX-000.5

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the sample listed above. Note that 19 soil samples included on the COC were placed on hold and therefore, one sample was analyzed and included in this SDG for review. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 1, 2023. The sample was analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/11/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23K0800
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) soil samples were listed on the COC for SDG 23K0800. Nineteen (19) of the samples were placed on hold and one sample was scheduled for analysis. The samples were collected on 11/01/2023 and were received at the laboratory on 11/06/2023 at 2.8 and 2.9 °C.

Sample ID	Laboratory ID	Analyses
P-312-EX-000.5	23K0800-12	PCBs

A complete laboratory report was received for SDG 23K0800.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: The sample was extracted within 14 days of collection and analyzed within 40 days of extraction, as specified on Table 2-6-1 of the Program Quality Assurance Project Plan (QAPP) for the St. Johnsbury Armory site (October 2022). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the sample of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for the sample of this SDG. No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

MS/MSD analyses were not performed for this SDG. No actions are required.

9. **Laboratory Duplicates**

Not applicable for this analysis.

10. **Serial Dilution (metals only)**

Not applicable for this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

A field duplicate sample was not submitted with the samples of this SDG. No actions are required.

12. **Internal Standards**

Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

There were no PCB Aroclor detections in the sample. Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) are met and no actions are required.

14. **Performance Evaluation (PE) Samples**

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. **Quantitation Limits**

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. **Other**

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples was met for the sample.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Boston, MA 02109-3912

Re: USEPA Contract No. 68HE0122D0001
USEPA Task Order No. 68HE0122F0044
Targeted Brownfield Assessment (TBA) Site
St. Johnsbury Armory Site
St. Johnsbury, Vermont
Sample Delivery Group (SDG) No. 23K0801

Pace Analytical (formerly Con-test), East Longmeadow, MA

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

1/Soil Sample: P-324-EX-000.5

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the sample listed above. Note that 19 soil samples included on the COC were placed on hold and therefore, one sample was analyzed and included in this SDG for review. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 2, 2023. The sample was analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
NA	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)

Nobis Group®

NA	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

December 18, 2023
Nobis File No. S00001.017

Ms. Christine Beling
USEPA - Region I
Land, Chemicals, and Redevelopment Division
5 Post Office Square, Suite 100
Boston, MA 02109-3912

Re: USEPA Contract No. 68HE0122D0001
USEPA Task Order No. 68HE0122F0044
Targeted Brownfield Assessment (TBA) Site
St. Johnsbury Armory Site
St. Johnsbury, Vermont
Sample Delivery Group (SDG) No. 23K0802

Pace Analytical (formerly Con-test), East Longmeadow, MA

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

2/Soil Samples: P-313-EX-000.5, P-314-EX-000.5
1/Field Duplicate Pair: P314-EX-000.5 / P-FD024 (in SDG 23K0796)

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. Note that 18 soil samples included on the COC were placed on hold and therefore, two samples were analyzed and included in this SDG for review. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 1, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	• Overall Evaluation of Data and Potential Usability Issues
*	• Data Completeness
*	• Preservation and Technical Holding Times
*	• Blanks
*	• Surrogates (PCBs only)
NA	• Internal Standards
*	• Matrix Spike Analysis
NA	• Laboratory Duplicates

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
*	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
	•	Target Analyte Identification
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Results were qualified for dual column imprecision.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Linda Terzis

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/13/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23K0802
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) soil samples were listed on the COC for SDG 23K0802. Eighteen (18) of the samples were placed on hold and two samples were scheduled for analysis. The samples were collected on 11/01/2023 and were received at the laboratory on 11/06/2023 at 2.8 and 2.9 °C.

Sample ID	Laboratory ID	Analyses
P-313-EX-000.5	23K0802-05	PCBs
P-314-EX-000.5	23K0802-18	PCBs

A complete laboratory report was received for SDG 23K0802.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: The samples were extracted within 14 days of collection and analyzed within 40 days of extraction, as specified on Table 2-6-1 of the Program Quality Assurance Project Plan (QAPP) for the St. Johnsbury Armory site (October 2022). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for the samples of this SDG. No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed on sample P-313-EX-000.5 (23K0802-05).

Percent recoveries of Aroclors 1016 and 1260 were within the Program QAPP limits of 40-140% in the MS and MSD analyses on both analytical columns. RPDs were ≤ 30%, as specified in the Program QAPP. No actions are required.

9. **Laboratory Duplicates**

Not applicable for this analysis.

10. **Serial Dilution (metals only)**

Not applicable for this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

The following field duplicate pair is associated with the samples of this SDG.

- P-314-EX-000.5 / P-FD024 (23K0802-18 / 23K0796-19)

PCBs: Field duplicate precision criteria were met for the field duplicate pair. No actions are required.

12. **Internal Standards**

Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines, [NFGs, 2020]) were exceeded for the Aroclor 1254 detection in sample P-314-EX-000.5 (23K0802-18) (32%). Based on the NFGs (2020), the detected result for Aroclor 1254 in sample P-314-EX-000.5 is qualified as estimated (J) due to dual column imprecision.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples was met for the samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Field Duplicate Evaluation

SDG: 23K0796 PCBs

Analyte	Original Result mg/kg	Qual	Duplicate Result mg/kg	Qual	RPD ≤ 50%	Abs Diff	Comment

Targeted Brownfield Assessment (TBA) Site
St. Johnsbury Armory Site
St. Johnsbury, Vermont
Sample Delivery Group (SDG) No. 23K0803

Pace Analytical (formerly Con-test), East Longmeadow, MA

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

2/Soil Samples: P-322-EX-000.5, P-323-EX-000.5

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. Note that 18 soil samples included on the COC were placed on hold and therefore, two samples were analyzed and included in this SDG for review. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 2, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
NA	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

NA	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/11/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23K0803
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) soil samples were listed on the COC for SDG 23K0803. Eighteen (18) of the samples were placed on hold and two samples were scheduled for analysis. The samples were collected on 11/02/2023 and were received at the laboratory on 11/06/2023 at 2.9 and 4.0 °C.

Sample ID	Laboratory ID	Analyses
P-322-EX-000.5	23K0803-02	PCBs
P-323-EX-000.5	23K0803-15	PCBs

A complete laboratory report was received for SDG 23K0803.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: The samples were extracted within 14 days of collection and analyzed within 40 days of extraction, as specified on Table 2-6-1 of the Program Quality Assurance Project Plan (QAPP) for the St. Johnsbury Armory site (October 2022). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for the samples of this SDG. No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed for this SDG. No action is required.

9. **Laboratory Duplicates**

Not applicable for this analysis.

10. **Serial Dilution (metals only)**

Not applicable for this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

Field duplicate samples were not submitted with the samples of this SDG. No action is required.

12. **Internal Standards**

Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) are met and no actions are required.

14. **Performance Evaluation (PE) Samples**

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. **Quantitation Limits**

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples was met for the samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Sample Delivery Group (SDG) No. 23K0804

Pace Analytical (formerly Con-test), East Longmeadow, MA

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

1/Soil Sample: P-315-EX-000.5

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the sample listed above. Note that 19 soil samples included on the COC were placed on hold and therefore, one sample was analyzed and included in this SDG for review. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 1, 2023. The sample was analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
NA	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/11/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23K0804
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) soil samples were listed on the COC for SDG 23K0804. Nineteen (19) of the samples were placed on hold and one sample was scheduled for analysis. The samples were collected on 11/01/2023 and were received at the laboratory on 11/06/2023 at 2.5 and 2.9 °C.

Sample ID	Laboratory ID	Analyses
P-315-EX-000.5	23K0804-11	PCBs

A complete laboratory report was received for SDG 23K0804.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: The sample was extracted within 14 days of collection and analyzed within 40 days of extraction, as specified on Table 2-6-1 of the Program Quality Assurance Project Plan (QAPP) for the St. Johnsbury Armory site (October 2022). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the sample of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for the sample of this SDG. No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

MS/MSD analyses were not performed for this SDG. No actions are required.

9. **Laboratory Duplicates**

Not applicable for this analysis.

10. **Serial Dilution (metals only)**

Not applicable for this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

A field duplicate sample was not submitted with the samples of this SDG. No actions are required.

12. **Internal Standards**

Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) were exceeded for the detected Aroclor 1254 result in sample P-315-EX-000.5 (26.1%). Based on the NFGs (2020), the detected result for Aroclor 1254 in sample P-315-EX-000.5 (23K0804-11) is qualified as estimated (J) due to dual column imprecision.

14. **Performance Evaluation (PE) Samples**

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. **Quantitation Limits**

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. **Other**

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples was met for the sample.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Nobis File No. S00001.017

Ms. Christine Beling
USEPA - Region I
Land, Chemicals, and Redevelopment Division
5 Post Office Square, Suite 100
Boston, MA 02109-3912

Re: USEPA Contract No. 68HE0122D0001
USEPA Task Order No. 68HE0122F0044
Targeted Brownfield Assessment (TBA) Site
St. Johnsbury Armory Site
St. Johnsbury, Vermont
Sample Delivery Group (SDG) No. 23K0805

Pace Analytical (formerly Con-test), East Longmeadow, MA

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

1/Soil Sample: P-321-EX-000.5
1/Field Duplicate Pair: P-321-EX-000.5 / P-FD029 (in SDG 23K0795)

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the sample listed above. Note that 19 soil samples included on the COC were placed on hold and therefore, one sample was analyzed and included in this SDG for review. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 2, 2023. The sample was analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
NA	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
*	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/11/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23K0805
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) soil samples were listed on the COC for SDG 23K0805. Nineteen (19) of the samples were placed on hold and one sample was scheduled for analysis. The samples were collected on 11/02/2023 and were received at the laboratory on 11/06/2023 at 2.5, 2.9, and 4.0 °C.

Sample ID	Laboratory ID	Analyses
P-321-EX-000.5	23K0805-09	PCBs

A complete laboratory report was received for SDG 23K0805.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: The sample was extracted within 14 days of collection and analyzed within 40 days of extraction, as specified on Table 2-6-1 of the Program Quality Assurance Project Plan (QAPP) for the St. Johnsbury Armory site (October 2022). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the sample of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for the sample of this SDG. No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

MS/MSD analyses were not performed for this SDG. No actions are required.

9. **Laboratory Duplicates**

Not applicable for this analysis.

10. **Serial Dilution (metals only)**

Not applicable for this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

The following field duplicate pair is associated with the samples of this SDG.

- P-321-EX-000.5 / P-FD029 (23K0805-09 / 23K0795-04)

PCBs: Field duplicate precision criteria were met for the field duplicate pair. No actions are required.

12. **Internal Standards**

Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) were met for the detected Aroclor 1254 result in sample P-321-EX-000.5 (5.7%). No actions are required.

14. **Performance Evaluation (PE) Samples**

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. **Quantitation Limits**

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples was met for the sample.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Re: USEPA Contract No. 68HE0122D0001
USEPA Task Order No. 68HE0122F0044
Targeted Brownfield Assessment (TBA) Site
St. Johnsbury Armory Site
St. Johnsbury, Vermont
Sample Delivery Group (SDG) No. 23K0806

Pace Analytical (formerly Con-test), East Longmeadow, MA

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

1/Soil Sample: P-318-EX-000.5

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the sample listed above. Note that 19 soil samples included on the COC were placed on hold and therefore, one sample was analyzed and included in this SDG for review. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 1, 2023 and November 2, 2023. The sample was analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
NA	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

NA	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Linda Terzis

Parameter	Analyte	Samples	Evaluation Criteria	Action Needed	Comments
PCBs					
	Qualification of the data is not required.				

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/12/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23K0806
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) soil samples were listed on the COC for SDG 23K0806. Nineteen (19) of the samples were placed on hold and one sample was scheduled for analysis. The samples were collected on 11/01/2023 and 11/02/2023, and were received at the laboratory on 11/06/2023 at 2.9 and 4.0 °C.

Sample ID	Laboratory ID	Analyses
P-318-EX-000.5	23K0806-10	PCBs

A complete laboratory report was received for SDG 23K0806.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: The sample was extracted within 14 days of collection and analyzed within 40 days of extraction, as specified on Table 2-6-1 of the Program Quality Assurance Project Plan (QAPP) for the St. Johnsbury Armory site (October 2022). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the sample of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for the sample of this SDG. No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

MS/MSD analyses were not performed for this SDG. No actions are required.

9. **Laboratory Duplicates**

Not applicable for this analysis.

10. **Serial Dilution (metals only)**

Not applicable for this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

Field duplicate samples were not submitted with the samples of this SDG. No actions are required.

12. **Internal Standards**

Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

Results for all PCB Aroclors were non-detect in the sample. Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) are met and no actions are required.

14. **Performance Evaluation (PE) Samples**

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. **Quantitation Limits**

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. **Other**

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples was met for the sample.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

2/Soil Samples: P-316-EX-000.5, P-317-EX-000.5

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. Note that 18 soil samples included on the COC were placed on hold and therefore, two samples were analyzed and included in this SDG for review. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 1, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
NA	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

NA	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/12/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23K0807
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) soil samples were listed on the COC for SDG 23K0807. Eighteen (18) of the samples were placed on hold and two samples were scheduled for analysis. The samples were collected on 11/01/2023 and were received at the laboratory on 11/06/2023 at 2.5, 2.9, and 4.0 °C.

Sample ID	Laboratory ID	Analyses
P-316-EX-000.5	23K0807-04	PCBs
P-317-EX-000.5	23K0807-14	PCBs

A complete laboratory report was received for SDG 23K0807.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: The samples were extracted within 14 days of collection and analyzed within 40 days of extraction, as specified on Table 2-6-1 of the Program Quality Assurance Project Plan (QAPP) for the St. Johnsbury Armory site (October 2022). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for the samples of this SDG. No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed for this SDG. No action is required.

9. **Laboratory Duplicates**

Not applicable for this analysis.

10. **Serial Dilution (metals only)**

Not applicable for this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

Field duplicate samples were not submitted with the samples of this SDG. No action is required.

12. **Internal Standards**

Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) are met and no actions are required.

14. **Performance Evaluation (PE) Samples**

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. **Quantitation Limits**

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples was met for the samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

2/Soil Samples: P-319-EX-000.5, P-320-EX-000.5
1/Field Duplicate Pair: P-319-EX-000.5 / P-FD028 (in SDG 23K0795)

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. Note that 18 soil samples included on the COC were placed on hold and therefore, two samples were analyzed and included in this SDG for review. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 2, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed for this SDG. No action is required.

9. **Laboratory Duplicates**

Not applicable for this analysis.

10. **Serial Dilution (metals only)**

Not applicable for this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

The following field duplicate pair is associated with the samples of this SDG.

- P-319-EX-000.5 / P-FD028 (23K0808-03 / 23K0795-03)

Field duplicate precision criteria were met and no actions are required.

12. **Internal Standards**

Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

Results for all PCB Aroclors were non-detect in the samples. Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) are met and no actions are required.

14. **Performance Evaluation (PE) Samples**

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples was met for the samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

December 18, 2023
Nobis File No. S00001.017

Ms. Christine Beling
USEPA - Region I
Land, Chemicals, and Redevelopment Division
5 Post Office Square, Suite 100
Boston, MA 02109-3912

Re: USEPA Contract No. 68HE0122D0001
USEPA Task Order No. 68HE0122F0044
Targeted Brownfield Assessment (TBA) Site
St. Johnsbury Armory Site
St. Johnsbury, Vermont
Sample Delivery Group (SDG) No. 23K1921

Pace Analytical (formerly Con-test), East Longmeadow, MA

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

3/Building Material Samples: P-329-EX, P-330-EX, P-331-EX

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 1, 2023 and November 2, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
*	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
NA	•	Field Duplicates

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that 20 samples are included on the COC for this SDG. All samples were placed on hold at the laboratory except for sample P-FD024, which was analyzed and reported in SDG 23K0796. Analysis of 3 of the on-hold samples was subsequently requested by Nobis. This data review includes results for the 3 samples.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/12/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23K1921
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) building material samples, including seven (7) field duplicate samples, were listed on the COC for SDG 23K1921. Note that all samples except P-FD024 were placed on hold. Sample P-FD024 was analyzed and reported in SDG 23K0796. Analysis of 3 of the on-hold samples was subsequently requested by Nobis. Results for the 3 samples are reported in this SDG and included in the data review. The samples were collected on 11/01/2023 and 11/02/2023 and were received at the laboratory on 11/06/2023 at 2.5 °C.

Sample ID	Laboratory ID	Analyses
P-329-EX	23K1921-01	PCBs
P-330-EX	23K1921-02	PCBs
P-331-EX	23K1921-03	PCBs

A complete laboratory report was received for SDG 23K1921.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples. No actions are required.

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were performed on sample P-329-EX (23K1921-01).

Percent recoveries of Aroclors 1016 and 1260 met the Program QAPP limits of 40-140% in the MS and MSD analyses on both analytical columns. No action is required.

9. **Laboratory Duplicates**

Not applicable for this analysis.

10. **Serial Dilution (metals only)**

Not applicable for this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

Field duplicate samples were analyzed with the samples of this SDG. No action is required.

12. **Internal Standards**

Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

Results for all PCB Aroclors were non-detect for all samples. Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) were met. No actions are required.

14. **Performance Evaluation (PE) Samples**

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

St. Johnsbury, Vermont
Sample Delivery Group (SDG) No. 23K2921

Pace Analytical (formerly Con-test), East Longmeadow, MA

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

9/Soil Samples: P-308-EX-0.501, P-313-EX-0.501, P-314-EX-0.501, P-315-EX-0.501, P-315-EX-0101.5, P-316-EX-0.501, P-321-EX-0.501, P-323-EX-0.501, P-326-EX-0.501

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 1, 2023 and November 2, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
NA	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

NA	•	Field Duplicates
NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

Note that 20 samples are included on the COC for this SDG. All samples were placed on hold at the laboratory. Analysis of the 9 samples of this SDG was subsequently requested by Nobis on 11/20/2023. This data review includes results for the 9 samples.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Parameter	Analyte	Samples	Evaluation Criteria	Action Needed	Comments
PCBs					
	Qualification of the data was not required.				

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/13/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23K2921
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Nine (9) soil samples were listed on the COC for SDG 23K2921. The samples were collected on 11/01/2023 and 11/02/2023 and were received at the laboratory on 11/06/2023 at temperatures ranging from 2.5 to 4.0 °C. The samples were placed on hold. Analysis of these 9 samples was subsequently requested by Nobis on 11/20/2023. Results for the 9 samples are reported in this SDG and included in the data review.

Sample ID	Laboratory ID	Analyses
P-308-EX-0.501	23K2921-01	PCBs
P-313-EX-0.501	23K2921-02	PCBs
P-314-EX-0.501	23K2921-03	PCBs
P-315-EX-0.501	23K2921-04	PCBs
P-315-EX-0101.5	23K2921-05	PCBs
P-316-EX-0.501	23K2921-06	PCBs
P-321-EX-0.501	23K2921-07	PCBs
P-323-EX-0.501	23K2921-08	PCBs
P-326-EX-0.501	23K2921-09	PCBs

A complete laboratory report was received for SDG 23K2921.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: The samples were extracted within the holding time of 14 days of the samples being released from on-hold status (November 20, 2023). The samples were analyzed within 40 days of extraction, as specified on Table 2-6-1 of the Program QAPP (October 2022). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

   Not applicable for this analysis.

6. **Surrogates (PCBs only)**

   PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples. No actions are required.

7. **Laboratory Control Samples**

   PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

   PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

   If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
   If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

   MS/MSD analyses were not performed for this SDG. No action is required.

9. **Laboratory Duplicates**

   Not applicable for this analysis.

10. **Serial Dilution (metals only)**

    Not applicable for this analysis.

11. **Field Duplicate Precision**

    Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

    Field duplicate samples were not submitted with the samples of this SDG. No actions are required.

12. **Internal Standards**

    Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

    Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) were met for all Aroclor detections. RPDs for the Aroclor 1254 detections in samples 23K2921-03

and 23K2921-06 were not provided by laboratory since detections were near the RL and alternate column results were < RL. No actions are required.

14. Performance Evaluation (PE) Samples

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% was met for all soil samples. No actions are required.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

3/Building Material Samples: P-332-EX, P-333-EX, P-334-EX

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the samples listed above. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on December 3, 2023. The samples were analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards
NA	•	Matrix Spike Analysis
NA	•	Laboratory Duplicates
*	•	Laboratory Control Samples (LCS)/Standard Reference Material (SRM) Recovery (metals only)
NA	•	Field Duplicates

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

NA	•	ICP Serial Dilutions (metals only)
NA	•	Performance Evaluation (PE) Samples
*	•	Target Analyte Identification
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or qualification was not required.
NA – Not applicable.

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Linda Terzis

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/14/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23L0356
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Three (3) building material samples were listed on the COC for SDG 23L0356. The samples were collected on 12/03/2023 and were received at the laboratory on 12/04/2023 at 3.8 °C.

Sample ID	Laboratory ID	Analyses
P-332-EX	23L0356-01	PCBs
P-333-EX	23L0356-02	PCBs
P-334-EX	23L0356-03	PCBs

A complete laboratory report was received for SDG 23L0356.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: Holding time limits are not applicable for building material samples, based on Table 3 of the Quality Assurance Project Plan Addendum (QAPPA) for the St. Johnsbury Armory site (July 2023). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the samples of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

6. **Surrogates (PCBs only)**

PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for all samples. No actions are required.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

7. **Laboratory Control Samples**

PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

MS/MSD analyses were not performed for this SDG. No action is required.

9. **Laboratory Duplicates**

Not applicable for this analysis.

10. **Serial Dilution (metals only)**

Not applicable for this analysis.

11. **Field Duplicate Precision**

Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

Field duplicate samples were not submitted with the samples of this SDG. No action is required.

12. **Internal Standards**

Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

Results for all Aroclors were non-detect in all samples. Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) were met. No actions are required.

14. **Performance Evaluation (PE) Samples**

A PE sample was not submitted with the samples of this SDG. No actions are required.

15. **Quantitation Limits**

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples does not apply to building material samples.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Tier 1 Stage 2A Organic Data Review

Polychlorinated Biphenyls (PCBs by 8082A):

1/Soil Sample: P-313-EX-0101.5

Dear Ms. Beling:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV II, LLC (KGSNE), performed a Tier 1 Stage 2A manual data review (S2AVM) on the organic analytical data for the sample listed above. Note that 18 soil samples included on the COC were placed on hold or analyzed and reported in other SDGs. The sample of this SDG was placed on hold and analysis of the sample was subsequently requested by Nobis on December 5, 2023. The samples were collected by Nobis at the St. Johnsbury Armory site located in St. Johnsbury, Vermont, on November 1, 2023. The sample was analyzed for PCB Aroclors by EPA Method 8082A by Pace Analytical (formerly Con-test).

The Tier 1 Stage 2A manual data review was performed in accordance with the Region I - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Organic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) and the QAPPA Update (October 2023) for St. Johnsbury Armory, which append the October 2022 Program QAPP.

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
*	•	Preservation and Technical Holding Times
*	•	Blanks
*	•	Surrogates (PCBs only)
NA	•	Internal Standards

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project quality criteria and can be used without restriction except as summarized below. The attachments provide details and supporting documentation.

PCBs:
Qualification of the data was not required.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

Data Review Qualification Actions
Case: St. Johnsbury Armory
SDG: 23L0426

Parameter	Analyte	Samples	Evaluation Criteria	Action Needed	Comments
PCBs					
	Qualification of the data was not required.				

Tier 1 Stage 2A Data Review Checklist

Project: St. Johnsbury Armory Site, St. Johnsbury, Vermont
Project #: S00001.017
Case#: NA
Date: 12/15/2023
Methods: PCBs (8082A)
Laboratory: Pace Analytical (formerly Con-test), East Longmeadow, MA
SDG: 23L0426
Reviewer: Linda Terzis

1. **Case Narrative and Data Package Completeness (COC and Analyte List Review)**
Twenty (20) soil samples were listed on the COC for SDG 23L0426. Eighteen (18) of the samples were placed on hold and two samples were analyzed and reported in other SDGs. The sample of this SDG (23L0426) was placed on hold. Analysis of the sample was subsequently requested by Nobis on 12/05/2023. The samples were collected on 11/01/2023 and were received at the laboratory on 11/06/2023 at 2.8 and 2.9 °C.

Sample ID	Laboratory ID	Analyses
P-313-EX-0101.5	23L0426-01	PCBs

A complete laboratory report was received for SDG 23L0426.

2. **Holding Time and Sample Preservation Compliance**

Receipt temperature met the acceptable level of ≤ 6 °C.

PCBs: The sample was extracted within 14 days of the sample being released from on-hold status (December 5, 2023). The sample was analyzed within 40 days of extraction, as specified on Table 2-6-1 of the Program Quality Assurance Project Plan (QAPP) for the St. Johnsbury Armory site (October 2022). No actions are required.

3. **Calibration Issues**

Not assessed for S2AVM.

4. **Lab and Field Blanks**

PCBs: Results for the laboratory method blank associated with the sample of this SDG were non-detect. No blank actions are required.

An equipment blank was not required during sample collection for the site.

5. **Interference Check Sample (metals only)**

Not applicable for this analysis.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

6. **Surrogates (PCBs only)**

   PCBs: Surrogate recoveries were within the Program QAPP limits (30-150%) for the sample of this SDG. No actions are required.

7. **Laboratory Control Samples**

   PCBs: Percent recoveries of Aroclors 1016 and 1260 in the PCB LCS/LCSD pair met the Program QAPP limits of 40-140% recovery and relative percent difference (RPD) ≤ 30%. No action is required.

8. **Matrix Spikes**

   PCBs: Only Aroclors 1016 and 1260 were spiked in the MS/MSD; therefore, based on professional judgment, if actions are required, they are applied as follows:

   If 1016 %R or %RPD out: Qualify 1016, 1221, 1232, 1242
   If 1260 %R or %RPD out: Qualify 1248, 1254, 1260, 1262,1268

   MS/MSD analyses were performed for this SDG. No action is required.

9. **Laboratory Duplicates**

   Not applicable for this analysis.

10. **Serial Dilution (metals only)**

    Not applicable for this analysis.

11. **Field Duplicate Precision**

    Criteria based on the EPA Region I Environmental Data Review Supplement (September 2020): RPD ≤ 50% (soils) for results ≥ 5x QL or absolute difference of ≤ 4x QL for results < 5X QL.

    Field duplicate samples were not submitted with the sample of this SDG. No action is required.

12. **Internal Standards**

    Not applicable for this analysis.

13. **Dual Column Precision (PCBs only)**

    Results for all PCB Aroclors were non-detect in the sample. Dual column precision criteria (≤ 25% RPD per the National Functional Guidelines [NFGs, 2020]) are met and no actions are required.

14. **Performance Evaluation (PE) Samples**

    A PE sample was not submitted with the samples of this SDG. No actions are required.

15. Quantitation Limits

PCBs: Laboratory quantitation limits (QLs) for non-detect Aroclor results met the PAL of ≤ 1 mg/kg for total PCBs, per Table 4 of the QAPPA.

16. Other

The EPA Region I Environmental Data Review Supplement (2020) percent solids criterion of ≥ 30% for soil samples was met for the sample.

Overall bias is considered indeterminate when cumulative nonconformances do not show a consistent bias or in cases of the presence of conflicting high and low biases.

Dear Ms. Place:

Nobis Group (Nobis), under a USEPA contract as a subcontractor to KGSNE JV, LLC (KGSNE), performed a Tier 1/Stage 1 manual (S1VM) data completeness review on the asbestos analytical data for the samples listed above. The samples were collected on 08/15/2023 through 08/16/2023 by Nobis at St. Johnsbury Armory in St. Johnsbury, Vermont. The samples were analyzed by EMSL Analytical, Inc. in Woburn, MA, for asbestos by PLM by Method 40CFR 763 Subpart E Appendix E Supplemented with EPA Method 600/R-93/116.

The Tier 1/Stage 1 manual data review was performed in accordance with the Region 1 - EPA New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures (September 2020); USEPA's National Functional Guidelines for Inorganic Superfund Methods Data Review (November 2020); the Program Quality Assurance Project Plan (Program QAPP) dated October 2022, and the Quality Assurance Project Plan Addendum (QAPPA) (July 2023) for the St. Johnsbury Armory project, which appends the October 2022 Program QAPP.

Nobis Group®
585 Middlesex Street
Lowell, MA 01851
T (978) 683-0891

The data were evaluated based on the following parameters:

*	•	Overall Evaluation of Data and Potential Usability Issues
*	•	Data Completeness
NA	•	Preservation and Technical Holding Times
*	•	Reported Quantitation Limits

* All criteria were met for this parameter or results did not require qualification.
NA-Not applicable

Overall Evaluation of Data and Potential Usability Issues

The site sampling objectives are:

- Perform a supplemental hazardous building material survey (HBMS) to address data gaps identified by Atlas Technical Consultants (ATC).
- Further delineate the distribution of hazardous materials to support future building renovation and reuse or demolition and disposal.
- Evaluate sub-slab soils for possible contamination by PCBs.

The data meet the project completeness criteria and can be used without restriction.

The attachments provide details and supporting documentation.

Please contact Linda Terzis at lterzis@nobis-group.com should you have any questions or comments regarding this information.

Sincerely,

NOBIS GROUP®

1. Case Narrative and Data Package Completeness (COC and Analyte List Review)

Ninety-seven (97) building material samples, collected on 08/15/2023 through 08/16/2023, were listed on the chain of custody (COC). The samples were received by the laboratory on 08/22/2023 and were analyzed and reported in SDG 132305450.

The samples were analyzed by EMSL Analytical, Inc., in Woburn, MA, for asbestos by PLM using Method 40CFR 763 Subpart E Appendix E supplemented with EPA Method 600/R-93/116.

A limited data package (results only) for the sample analyses was received for 132305450.

Note that several sample results were reported as “Positive Stop (Not Analyzed)” for the PLM analysis. “Positive stop” indicates that one sample from a homogeneous area is greater than 1% asbestos and therefore, the other samples of the homogeneous area do not need to be analyzed.

2. Holding Time and Sample Preservation Compliance

No holding time or preservation criteria are applicable for the asbestos analyses of these bulk building material samples.

3. Laboratory Blanks

N/A

4. Laboratory Control Sample Review

N/A

5. **Field Duplicate Precision**

   No field duplicates were submitted with this data set.

6. **Laboratory Duplicate Precision**

   N/A

7. **Matrix Spike Results (if applicable)**

   N/A

8. **Surrogate Recovery (if applicable)**

   N/A

9. **Quantitation Limits**

   Laboratory reporting limits for non-detect PLM results meet the project action limit of asbestos (< 1%), as indicated on the COC.

10. **Internal Standard Recovery (if applicable)**

    N/A

11. **Other**

    No issues noted.

State of Connecticut (CT) must select project location:	☐ Commercial (Taxable) ☐ Residential (Non-Taxable)		
Sampled By Name:	Bridget Fortier	Sampled By Signature:	
Date Sampled:		No. of Samples in Shipment	

Turn-Around-Time (TAT)

☐ 3 Hour ☐ 6 Hour ☐ 24 Hour ☐ 32 Hour ☐ 48 Hour ☐ 72 Hour ☐ 96 Hour ☑ 1 Week ☐ 2 Week

Please call ahead for large projects and/or turnaround times 6 Hours or Less. *32 Hour TAT available for select tests only; samples must be submitted by 11:30am.

Test Selection

PLM - Bulk (reporting limit)

- ☑ PLM EPA 600/R-93/116 (<1%)
- ☐ PLM EPA NOB (<1%)
- ☐ POINT COUNT
  - ☐ 400 (<0.25%) ☐ 1,000 (<0.1%)
- ☐ POINT COUNT w/ GRAVIMETRIC
  - ☐ 400 (<0.25%) ☐ 1,000 (<0.1%)
- ☐ NIOSH 9002 (<1%)
- ☐ NYS 198.1 (Friable - NY)
- ☐ NYS 198.6 NOB (Non-Friable - NY)
- ☐ NYS 198.8 (Vermiculite SM-V)

TEM - Bulk

- ☐ TEM EPA NOB
- ☐ NYS NOB 198.4 (Non-Friable - NY)
- ☐ TEM EPA 600/R-93/116 w Milling Prep (0.1%)

Other Tests (please specify)

☑ Positive Stop - Clearly Identified Homogeneous Areas (HA)

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 “Interim Method”) but augmented with procedures outlined in the 1993 (”final”) version of the method. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. Non-friable organically bound materials present a problem matrix and therefore EMSL recommends gravimetric reduction prior to analysis. Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Woburn, MA NVLAP Lab Code 101147-0, CT PH-0315, MA AA000188, RI AAL-139, VT AL998919, ME LB-0039

Appendix D – Structural Letter from Structural Design Engineer

ENGINEERING VENTURES PC

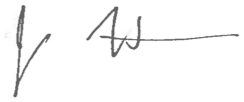
MEMO

Burlington, VT ▪ Lebanon, NH ▪ Schenectady, NY

Date: January 11, 2024

To: David Roy, AIA, Principal
Wiemann Lamphere Architects
DRoy@Wiemannlamphere.com

From: James Hoepker, P.E.



Re: St. Johnsbury Armory
Foundation Walls

This memo will serve as our opinion regarding remediation options for foundations walls in the existing building for PCB paint.

It is our understanding that two options for remediation include removal and replacement of an inner portion of the foundation wall in the basement or provide a coating to encapsulate the paint. It is our opinion that while the removal and replacement of part of the foundation wall is structurally possible, it is not financially prudent. The work would involve providing temporary shoring of the entire structure, while portions of the walls are removed and replaced. The work involved in providing the scope of removal and replacement would be prohibitive to the budget of the project.

Please feel free to reach out with any questions.

Regards,

James Hoepker, P.E.

Appendix E – Asbestos General Work Practices

GENERAL WORK PRACTICE REQUIREMENTS

1. DELIVERY OF EQUIPMENT
   All equipment and materials brought on to Owner's property by Contractor shall be free of visible dust, dirt, debris, and residue. All smooth surfaces of equipment and materials shall have been previously cleaned, off-site. All porous surfaces of equipment shall be sealed airtight at all times, until the equipment is in use inside the properly established abatement work area. All equipment openings which allow access to asbestos filtration materials including, but not limited to, hepa vacuum intake hoses and negative pressure filtration unit air intakes, shall be sealed airtight at all times until the equipment is in use inside the properly established abatement work area.

2. SIGNAGE
   Contractor shall post danger asbestos signs at all locations and approaches to any location where airborne fibers may be expected to exceed background levels in accordance with VOSHA 29 CFR 1926.1101. This shall include, but not be limited to, posting the personnel decontamination structure, waste load-out structure, and areas at the exterior of the building where negative pressure filtration unit exhaust ducts are located. Danger asbestos signs shall be posted in a manner that allows any individual around the abatement work area the opportunity to avoid entering the abatement work area. Danger asbestos signs shall be posted prior to the start of any work related to setup of the abatement work area.

3. PRE-CLEANING
   Contractor shall pre-clean all accessible surfaces within the abatement work area until free of visible dust, dirt, debris, or residue using wet cleaning methods and/or hepa vacuuming techniques. Contractor shall only use vacuums equipped with proper hepa filtration.

4. WORKER DECONTAMINATION STRUCTURE
   Contractor shall construct a worker decontamination enclosure system. The structure shall be used as the only means of entrance/exit to and from the abatement work area throughout the duration of the Project, unless an emergency situation exists. The structure shall be adjacent, but attached to, the abatement work area. The structure shall, at a minimum, be constructed according to VOSHA 29 CFR 1926.1101. Construction shall include, but not be limited to, construction of a clean room, shower room, and equipment room, each separated by three foot airlocks, with curtained doorways consisting of overlapping sheeting separating each airlock or chamber. The equipment room shall be located closest to the abatement work area. The shower room shall be between the equipment room and clean room. These rooms shall be large enough to allow proper personnel decontamination and personnel privacy. The decontamination structure, including the walls and ceiling, shall be constructed with a minimum of two (2) layers of 6 mil sheeting. The floor of

GENERAL WORK PRACTICE REQUIREMENTS (cont.)

WORKER DECONTAMINATION STRUCTURE (cont.)
the decontamination structure shall be constructed with a minimum of three (3) layers of 6 mil sheeting. The inside of the entire decontamination structure shall not be visible from anywhere outside of the structure. The clean room shall be used as an employee change area where street clothes shall be taken off and protective clothing shall be put on. The clean room shall not be used for storage of tools, equipment, or materials. Proper storage facilities for respirators and personal belongings, i.e., lockers, shall be available in the clean room. No asbestos contaminated items or individuals shall enter the clean room, or airlock between the shower and clean room, throughout the duration of the Project.

The shower room shall be constructed to prevent water leakage at any time. A minimum of three layers of 6 mil sheeting and one layer of absorbent towels (placed between the top and middle layers of sheeting) shall be placed under the floor of the shower room. The shower shall have a mounted shower head and supply adequate, continuous water pressure (hot and cold water) so as to allow individuals to properly decontaminate. The shower shall have adjustable controls so each individual can regulate the shower water temperature. Contractor shall supply a portable hot water heater, connect it to the shower, and ensure that the shower shall supply an adequate amount of hot water in order to allow for proper personnel decontamination. Contractor shall supply an adequate amount of soap, shampoo, and towels to all employees, Owner, Owner's Representative, and authorized visitors throughout the duration of the Project. All waste water generated during personnel decontamination shall be, at minimum, filtered through a 5 micron asbestos water filter prior to disposal in the municipal waste water system, or disposed of as asbestos waste.

Contractor shall maintain two logbooks within the clean room of the worker decontamination structure at all times the decontamination structure shall be in use. One logbook shall document the name, employer, work title, date, time into the abatement work area and time out of the abatement work area for all individuals who enter the abatement work area for any purpose at any time throughout the duration of the Project. The other logbook shall document the name, employer, work title and date for all individuals who visit the work site for any purpose at any time throughout the duration of the Project.

GENERAL WORK PRACTICE REQUIREMENTS (cont.)

5. WASTE LOAD-OUT STRUCTURE

Contractor may construct a two chamber structure to be used for asbestos waste load out. If the waste load-out structure is utilized it shall be adjacent, but attached to, the abatement work area. The structure shall be constructed in a similar fashion as the worker decontamination structure, including, but not limited to, sheeting and curtained doorways. The waste load-out structure shall have a water source for decontaminating disposal containers prior to pass out from the waste load-out structure. All waste water generated during asbestos waste container decontamination shall be, at minimum, filtered through a 5 micron asbestos water filter prior to disposal in the municipal waste water system, or disposed of as asbestos waste. If a waste load-out structure is utilized, all asbestos disposal containers generated by Contractor during the Project shall exit the abatement work area through the waste load-out structure. Contractor shall not pass any asbestos waste through the decontamination structure at any time throughout the duration of the Project. No individual shall enter or exit the abatement work area through the waste load-out structure at any time throughout the duration of the Project.

6. CRITICAL BARRIERS

Contractor shall construct airtight critical barriers across all openings between the abatement work area and air spaces outside of the abatement work area. Contractor shall construct airtight critical barriers around all immovable objects that do not contain asbestos, have been pre-cleaned, and must remain in the abatement work area. Critical barrier locations shall include, but not be limited to, doors, windows, heating, air conditioning, and ventilation system ductwork, grills, grates, drains, pipe chases, holes, and machinery.

A minimum of one layer of 6 mil sheeting and/or waterproof tape shall be used to construct all critical barriers. Expandable spray foam may be used to obtain an air tight seal across small openings. All expandable foam shall be approved for use by Underwriter's Laboratories, shall not contain formaldehyde, and shall have a smoke developed rating of 25 or less. All sheeting critical barriers which can not be directly attached to an existing wall, floor, ceiling, or duct surface shall be attached to a secure temporary framework adequate to ensure that critical barriers do not breach or become damaged at any time throughout the duration of the Project. All sheeting critical barriers that are larger than 32 square feet shall be attached to a secure temporary framework adequate to ensure that critical barriers do not breach or become damaged at any time throughout the duration of the Project.

All surfaces that shall become part of a critical barrier, or shall be behind a critical barrier, shall be cleaned until there is no visible dust, dirt, debris, or residue using hepa equipped vacuums and wet cleaning methods prior to construction of the critical barrier.

GENERAL WORK PRACTICE REQUIREMENTS (cont.)

CRITICAL BARRIERS (cont.)
Contractor shall not construct any critical barriers which will directly contact or be attached to asbestos containing materials.

Contractor shall inspect all critical barriers in the abatement work area, at least two times per day. At a minimum, barrier inspection shall occur prior to the start of each day's activities, and following completion of each day's activities. Contractor shall notify Owner's Representative of the results of each inspection and document these results. Contractor shall immediately repair all breaches or damage to critical barriers.

At all times throughout the duration of the Project, Contractor shall stop work and immediately repair any breach or damage to critical barriers upon discovery of any breach or damage.

7. CRITICAL BARRIER INSPECTION
Owner's Representative shall perform a comprehensive inspection of Contractor's setup of critical barriers in and around the abatement work area. The inspection shall be performed prior to construction of any containment barriers. The Contractor's Supervisor shall be present with Owner's Representative during this inspection. The inspection may include performance of a smoke test to assess the integrity of the critical barriers and determine air flow patterns and velocity in the abatement work area. Contractor shall immediately correct any discrepancies in critical barrier construction as requested by Owner's Representative.

8. CONTAINMENT BARRIERS
Contractor shall construct airtight containment barriers on all walls, floors, and ceilings of the abatement work area. All walls and ceilings shall be covered with a minimum of one layer of 6 mil sheeting. All floors shall be covered with a minimum of two layers of 6 mil sheeting (totaling, at minimum, 12 mils). All containment barriers shall be constructed in a manner that prevents slippage, minimizes seams, and prevents water leakage. All containment barriers shall be located, sized, and seamed in accordance with all applicable Federal and State regulations.

Contractor shall inspect all containment barriers in the abatement work area, including the personnel decontamination structure, at least two times per day. At a minimum, containment barrier inspection shall occur prior to the start of each day's activities, and following completion of each day's activities. Contractor shall notify Owner's Representative of the results of each inspection and document these results. Contractor shall immediately repair all breaches or damage to containment barriers which are found during the containment barrier inspection. At all times throughout the duration of the Project, Contractor shall stop work and immediately repair any breach or damage to containment barriers upon discovery of any breach or damage.

GENERAL WORK PRACTICE REQUIREMENTS (cont.)

9. NEGATIVE PRESSURE DIFFERENTIAL/FILTRATION

Contractor shall establish an adequate negative pressure differential between the abatement work area and the area directly outside the abatement work area in order to maintain a negative pressure differential of at least .03 inches, water column. An adequate negative pressure differential shall be maintained until proper completion of the Project clearance activity. In addition, negative pressure units equipped with hepa filtration shall provide one complete air change (filtration) within the abatement work area at least once every 10 minutes. All air exhausted from the negative pressure filtration units shall flow directly into air spaces outside of the building. Negative pressure filtration units shall, at minimum, be installed, used, and maintained according to the manufacturer's specifications and EPA 560/5-85-024, Guidance for Controlling Asbestos Containing Materials in Buildings.

Contractor shall provide an on-site instrument which measures the pressure differential between the abatement work area and the air space adjacent to the abatement work area. This instrument shall have a direct reading feature, a high and low limit audible alarm, and recording strip chart to provide a permanent record of the negative pressure differential whenever use of negative pressure filtration units is required. The instrument shall be accessible from outside the abatement work area to Owner, Owner's Representative, and authorized visitors throughout the duration of the Project. Contractor shall initially calibrate the pressure differential monitor and ensure that the instrument is properly calibrated at all times. Contractor shall indicate the day, date, and time on the strip chart upon arrival to and exit from the Project area at all times negative pressure filtration is required.

Contractor shall have at least one additional negative pressure filtration unit inside the abatement work area whenever use of negative pressure filtration units is required. All parts of each negative pressure filtration unit shall be located completely within the abatement work area boundaries.

10. INSPECTION OF SETUP PROCEDURES

Upon completion of all setup procedures, Contractor shall notify Owner's Representative. Contractor shall not begin to remove, enclose, or encapsulate any asbestos material at any time before this notification has been provided. Owner's Representative shall perform a comprehensive inspection of Contractor's setup in and around the abatement work area. Contractor's Supervisor shall be present with Owner's Representative during this inspection. The inspection may include performance of a smoke test to assess the integrity of the containment or critical barriers and determine air flow patterns and velocity in the abatement work area. Contractor shall immediately correct any discrepancies as requested by Owner's Representative.

GENERAL WORK PRACTICE REQUIREMENTS (cont.)

11. ASBESTOS ABATEMENT

Contractor shall remove all asbestos materials in the abatement work area using proper wet methods and housekeeping techniques which are detailed in applicable Federal and State regulations. All asbestos material shall be adequately wet at all times and shall not be allowed to accumulate on the floor or other surfaces of the abatement work area.

Whenever possible, asbestos materials shall be removed in large sections with minimal breakage or disturbance. Asbestos materials shall be carefully lowered to the floor and shall not be dropped or thrown. Amended water shall be used at all times. Water shall not be allowed to accumulate on the floor or other surfaces of the abatement work area.

All pipe dope on thermal system components (with the exception of obvious Teflon tape) shall be considered asbestos containing and/or asbestos contaminated and shall be properly removed by Contractor.

Cutting, bending, or removal of any conduit, wire, or other building system component shall not occur without prior approval from Owner or Owner's Representative.

12. CONTAINERIZATION/STORAGE OF ASBESTOS WASTE

Contractor shall place all asbestos waste material into containers that are labeled according to applicable Federal and State Regulations. Containers shall be adequate to prevent puncturing or ripping by asbestos and non-asbestos waste. If material is bagged, the container shall consist of a minimum of two 6 mil bags and shall be sealed airtight. All air within the container shall be removed from the container by hepa vacuuming methods. Both bags shall be "goosenecked" (i.e., completely sealed) to discourage leakage of water. Fiber drums shall be lined with a minimum of two 6 mil poly bags and material inside the drum shall be sealed airtight.

All material shall be adequately wet when placed into the disposal container. Accumulated asbestos waste shall be removed from the abatement work area each day. No asbestos waste shall be stored in the abatement work area overnight.

Asbestos waste shall only be stored in the on-site storage/transportation container or properly transported off-site and shall never be stored in another location on or off of Owner's property without prior approval of Owner. Contractor shall properly label the on-site storage container whenever asbestos waste containers are being placed into the on-site storage container.

All containerized asbestos waste shall be removed from the abatement work area prior to the start of the final visual inspection by the Owner's Representative.

GENERAL WORK PRACTICE REQUIREMENTS (cont.)

13. INITIAL CLEANING
Upon completion of removal and containerization, Contractor shall clean all surfaces in the entire abatement work area, including but not limited to, the decontamination structure, waste load out structure, containment barriers, and thermal system components, using wet cleaning methods and/or hepa filter equipped vacuum cleaners. Pressure washers shall not be used at any time to perform cleaning activities.

Contractor shall only use vacuums equipped with proper hepa filtration. Contractor shall not apply paint, an encapsulant/lockdown material, or any other coating or covering to any thermal system component or other surface within the abatement work area at any time throughout the duration of the Project.

14. INITIAL VISUAL INSPECTION
Upon completion of initial cleaning, Owner's Representative shall perform an initial visual inspection to determine if there is any visible dust, dirt, debris, or residue on any surfaces in the abatement work area. The Contractor's Supervisor shall be present with Owner's Representative during this inspection. Contractor shall re-clean all areas which have dust, dirt, debris, or residue, at the request of Owner's Representative.

15. TAKEDOWN OF CONTAINMENT BARRIERS
Upon completion of the initial visual inspection, Contractor shall remove all containment barriers from the walls and floor. All critical barriers shall remain in place. Containment barriers shall be considered asbestos contaminated and containerized and disposed of properly.

16. CLEANING OF THE ABATEMENT WORK AREA
Contractor shall clean all surfaces in the entire abatement work area, including but not limited to, the decontamination structure, waste load-out structure, critical barriers, exposed walls, floor, and ceiling, and thermal system components, until there is no visible dust, dirt, debris, or residue using wet cleaning methods and/or hepa filter equipped vacuum cleaners. Upon completion of cleaning, all surfaces shall be allowed to dry. Pressure washers shall not be used at any time to perform cleaning activities.

Contractor shall only use vacuums equipped with proper hepa filtration. Contractor shall not apply paint to any thermal system component or other surface within the abatement work area at any time throughout the duration of the Project.

GENERAL WORK PRACTICE REQUIREMENTS (cont.)

17. VISUAL INSPECTION

Owner's Representative shall perform a visual inspection of all surfaces in the entire abatement work area, including the decontamination structure and waste load-out structure for any visible dust, dirt, debris, or residue. In addition, Owner's Representative shall perform a touch test of surfaces to ensure no dust, dirt, debris, or residue can be felt on any surfaces. Prior to performance of the visual inspection, all surfaces in the abatement work area shall be dry. Contractor's Supervisor shall be present with Owner's Representative during the visual inspection. Contractor shall re-clean all areas which have visible dust, dirt, debris, or residue, at the request of Owner's Representative, until there is no visible dust, dirt, debris, or residue in the abatement work area.

18. CLEARANCE AIR MONITORING/ANALYSIS

Upon successful completion of the final visual inspection, Owner's Representative shall collect clearance air samples utilizing aggressive collection methods in accordance with VRAC. Clearance air samples shall be analyzed by a Vermont certified analytical service and analyst using Phase Contrast Microscopy (PCM).

The abatement work area shall be considered adequately clean at the completion of a comprehensive visual inspection (i.e., no visible dust, dirt, debris, or residue in the abatement work area), and after all clearance air samples which were collected indicate acceptable airborne fiber levels at the time of air sample collection in accordance with VRAC. Contractor shall re-clean the entire abatement work area for retesting if the above referenced clearance air monitoring criteria is not met.

19. REMOVAL OF CRITICAL BARRIERS

Upon successful completion of the clearance procedure, Contractor shall remove all critical barriers from the abatement work area. Contractor shall also remove the decontamination structure and waste load-out structure and restore the abatement work area to at least the condition as originally found. All critical barriers and decontamination structure barriers shall be considered asbestos contaminated and shall be containerized and disposed of properly.

GENERAL WORK PRACTICE REQUIREMENTS (cont.)

20. STORAGE/TRANSPORTATION OF ASBESTOS WASTE
Contractor shall properly containerize and remove from Owner's property all asbestos waste generated during the Project. All waste stored on-site prior to transport shall be stored in a secure, locked storage/transportation container, placed in a location acceptable to Owner and Owner's Representative.

Contractor shall transport all asbestos waste according to applicable Federal, State and Local regulations. Contractor shall maintain paperwork in accordance with all applicable Federal, State and Local regulations. Transportation forms shall itemize the specific number of containers (i.e., bags or drums) and total cubic yards of waste material that was generated during the Project and removed from Owner's property.

21. DISPOSAL OF ASBESTOS WASTE
Contractor shall properly dispose of all asbestos waste that is generated during the Project in accordance with all applicable Federal, State and Local regulations. The landfill facility shall be approved by Federal State and Local authorities to accept asbestos waste.

Contractor shall provide documentation of disposal form(s) to Owner and Owner's Representative no later than thirty (30) calendar days after release from on-site obligations. The form shall be signed and dated by a representative of the landfill and shall itemize the specific number of containers (i.e., bags or drums) and total cubic yards of waste material which were generated and received at the landfill.

All waste water generated by Contractor during the Project shall be disposed of properly as asbestos waste or properly filtered prior to discharge into the municipal waste water system. At minimum, a 5 micron filter fabric for asbestos shall be used for water filtration.

22. FINAL INSPECTION
Owner, Owner's Representative, and Contractor's Supervisor shall perform a final inspection in and around the abatement work area prior to formal release of Contractor. Contractor shall correct any deficiencies at Owner's request.

23. CONTRACTOR RELEASE FROM ON-SITE OBLIGATIONS
Upon satisfactory completion of Owner's final inspection, Contractor shall be informed of preliminary release from on-site obligations by Owner. Contractor shall not be released from on-site obligations until all asbestos waste, apparatus, equipment, materials, critical barriers, and containment barriers have been removed from Owner's property. At this time, Contractor's on-site obligations shall be considered complete.

GENERAL WORK PRACTICE REQUIREMENTS (cont.)

24. CONTRACTOR'S PROJECT CLOSURE REPORT
Contractor shall provide Owner and Owner's Representative with a project closure report in accordance with the Project Timetable. At minimum, this report shall include the following:

- All notifications/permits/licenses and other documentation related to the planning phase of the Project.
- All qualification certificates, licenses, accreditation documents, medical monitoring documents, and fit test forms of Contractor and all Contractor employees who participated in the Project.
- Written respiratory protection program.
- Material Safety Data sheets of all hazardous materials/substances used during the Project.
- Strip chart recordings of the negative pressure differential maintained throughout the duration of the Project.
- Sign-in/Sign-out logs for entrance to/exit from the abatement work area.
- Daily written Supervisor logs.
- Personnel air monitoring data, including negative exposure assessment data.

Appendix F – Proposed Encapsulant Information

Retro-Coat Standard Primer Part A

Land Science, a division of REGENESIS

Version No: **3.3**
Safety Data Sheet according to OSHA HazCom Standard (2012) requirements

Issue Date: **04/24/2023**
Print Date: **04/24/2023**
S.GHS.USA.EN

SECTION 1 Identification

Product Identifier

Product name	Retro-Coat Standard Primer Part A
Synonyms	Not Available
Other means of identification	Not Available

Recommended use of the chemical and restrictions on use

Relevant identified uses	Specialty Floor Resin

Name, address, and telephone number of the chemical manufacturer, importer, or other responsible party

Registered company name	**Land Science, a division of REGENESIS**
Address	1011 Calle Sombra San Clemente CA 92673 United States
Telephone	949-481-8118
Fax	949-366-8090
Website	landsciencetech.com
Email	CustomerService@LandScienceTech.com

Emergency phone number

Association / Organisation	**CHEMTREC 24/7**
Emergency telephone numbers	1-800-424-9300 (USA and Canada)
Other emergency telephone numbers	1-703-527-3887 (International

SECTION 2 Hazard(s) identification

Classification of the substance or mixture

NFPA 704 diamond

Note: The hazard category numbers found in GHS classification in section 2 of this SDSs are NOT to be used to fill in the NFPA 704 diamond. Blue = Health Red = Fire Yellow = Reactivity White = Special (Oxidizer or water reactive substances)

Classification	Skin Corrosion/Irritation Category 1C, Serious Eye Damage/Eye Irritation Category 1, Sensitisation (Skin) Category 1, Hazardous to the Aquatic Environment Long-Term Hazard Category 3

Label elements

Hazard pictogram(s)	
Signal word	**Danger**

Hazard statement(s)

H314	Causes severe skin burns and eye damage.
H317	May cause an allergic skin reaction.

Page 1 continued...

H412	Harmful to aquatic life with long lasting effects.

Hazard(s) not otherwise classified

Not Applicable

Precautionary statement(s) Prevention

P260	Do not breathe mist/vapours/spray.
P264	Wash all exposed external body areas thoroughly after handling.
P280	Wear protective gloves, protective clothing, eye protection and face protection.
P273	Avoid release to the environment.
P272	Contaminated work clothing must not be allowed out of the workplace.

Precautionary statement(s) Response

P301+P330+P331	IF SWALLOWED: Rinse mouth. Do NOT induce vomiting.
P303+P361+P353	IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower.
P305+P351+P338	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
P310	Immediately call a POISON CENTER/doctor/physician/first aider.
P363	Wash contaminated clothing before reuse.
P333+P313	If skin irritation or rash occurs: Get medical advice/attention.
P304+P340	IF INHALED: Remove person to fresh air and keep comfortable for breathing.

Precautionary statement(s) Storage

P405	Store locked up.

Precautionary statement(s) Disposal

P501	Dispose of contents/container to authorised hazardous or special waste collection point in accordance with any local regulation.

SECTION 3 Composition / information on ingredients

Substances

See section below for composition of Mixtures

Mixtures

CAS No	%[weight]	Name
Not Available	30-60	polyamine adduct
112-57-2*	1-5	tetraethylenepentamine
9046-10-0*	1-5	bis(2-aminopropyl ether) propoxylated

The specific chemical identity and/or exact percentage (concentration) of composition has been withheld as a trade secret.

SECTION 4 First-aid measures

Description of first aid measures

Eye Contact	If this product comes in contact with the eyes: ▸ Immediately hold eyelids apart and flush the eye continuously with running water. ▸ Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally lifting the upper and lower lids. ▸ Continue flushing until advised to stop by the Poisons Information Centre or a doctor, or for at least 15 minutes. ▸ Transport to hospital or doctor without delay. ▸ Removal of contact lenses after an eye injury should only be undertaken by skilled personnel.
Skin Contact	If skin or hair contact occurs: ▸ Immediately flush body and clothes with large amounts of water, using safety shower if available. ▸ Quickly remove all contaminated clothing, including footwear. ▸ Wash skin and hair with running water. Continue flushing with water until advised to stop by the Poisons Information Centre. ▸ Transport to hospital, or doctor.
Inhalation	▸ If fumes or combustion products are inhaled remove from contaminated area. ▸ Lay patient down. Keep warm and rested. ▸ Prostheses such as false teeth, which may block airway, should be removed, where possible, prior to initiating first aid procedures. ▸ Apply artificial respiration if not breathing, preferably with a demand valve resuscitator, bag-valve mask device, or pocket mask as trained. Perform CPR if necessary. ▸ Transport to hospital, or doctor.
Ingestion	▸ For advice, contact a Poisons Information Centre or a doctor at once. ▸ Urgent hospital treatment is likely to be needed. ▸ If swallowed do **NOT** induce vomiting. ▸ If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain open airway and prevent aspiration. ▸ Observe the patient carefully. ▸ Never give liquid to a person showing signs of being sleepy or with reduced awareness; i.e. becoming unconscious. ▸ Give water to rinse out mouth, then provide liquid slowly and as much as casualty can comfortably drink.

Continued...

	▸ Transport to hospital or doctor without delay.

Most important symptoms and effects, both acute and delayed

See Section 11

Indication of any immediate medical attention and special treatment needed

Treat symptomatically.

SECTION 5 Fire-fighting measures

Extinguishing media

- Foam.
- Dry chemical powder.
- BCF (where regulations permit).

Special hazards arising from the substrate or mixture

Fire Incompatibility	None known.

Special protective equipment and precautions for fire-fighters

Fire Fighting	▸ Alert Fire Brigade and tell them location and nature of hazard. ▸ Wear full body protective clothing with breathing apparatus. ▸ Prevent, by any means available, spillage from entering drains or water course.
Fire/Explosion Hazard	▸ Combustible. ▸ Slight fire hazard when exposed to heat or flame. ▸ Heating may cause expansion or decomposition leading to violent rupture of containers. May emit poisonous fumes. May emit corrosive fumes.

SECTION 6 Accidental release measures

Personal precautions, protective equipment and emergency procedures

See section 8

Environmental precautions

See section 12

Methods and material for containment and cleaning up

Minor Spills	▸ Remove all ignition sources. ▸ Clean up all spills immediately. ▸ Avoid breathing vapours and contact with skin and eyes.
Major Spills	Moderate hazard. ▸ Clear area of personnel and move upwind. ▸ Alert Fire Brigade and tell them location and nature of hazard.

Personal Protective Equipment advice is contained in Section 8 of the SDS.

SECTION 7 Handling and storage

Precautions for safe handling

Safe handling	▸ Avoid all personal contact, including inhalation. ▸ Wear protective clothing when risk of exposure occurs. ▸ Use in a well-ventilated area. ▸ **DO NOT** allow clothing wet with material to stay in contact with skin
Other information	▸ Store in original containers. ▸ Keep containers securely sealed. ▸ No smoking, naked lights or ignition sources.

Conditions for safe storage, including any incompatibilities

Suitable container	▸ Metal can or drum ▸ Packaging as recommended by manufacturer. ▸ Check all containers are clearly labelled and free from leaks.
Storage incompatibility	None known

SECTION 8 Exposure controls / personal protection

Control parameters

Continued...

Occupational Exposure Limits (OEL)

INGREDIENT DATA

Not Available

Emergency Limits

Ingredient	TEEL-1	TEEL-2	TEEL-3
tetraethylenepentamine	15 mg/m3	130 mg/m3	790 mg/m3
bis(2-aminopropyl ether) propoxylated	4.8 mg/m3	53 mg/m3	320 mg/m3

Ingredient	Original IDLH	Revised IDLH
polyamine adduct	Not Available	Not Available
tetraethylenepentamine	Not Available	Not Available
bis(2-aminopropyl ether) propoxylated	Not Available	Not Available

Occupational Exposure Banding

Ingredient	Occupational Exposure Band Rating	Occupational Exposure Band Limit
polyamine adduct	D	> 0.1 to ≤ 1 ppm
tetraethylenepentamine	E	≤ 0.1 ppm
bis(2-aminopropyl ether) propoxylated	E	≤ 0.1 ppm
Notes:	*Occupational exposure banding is a process of assigning chemicals into specific categories or bands based on a chemical's potency and the adverse health outcomes associated with exposure. The output of this process is an occupational exposure band (OEB), which corresponds to a range of exposure concentrations that are expected to protect worker health.*	

Exposure controls

Appropriate engineering controls	Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection. The basic types of engineering controls are: Process controls which involve changing the way a job activity or process is done to reduce the risk.
Individual protection measures, such as personal protective equipment	
Eye and face protection	‣ Chemical goggles. ‣ Full face shield may be required for supplementary but never for primary protection of eyes. ‣ Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants.
Skin protection	See Hand protection below
Hands/feet protection	‣ Wear chemical protective gloves, e.g. PVC. ‣ Wear safety footwear or safety gumboots, e.g. Rubber ‣ When handling corrosive liquids, wear trousers or overalls outside of boots, to avoid spills entering boots. **NOTE:** ‣ The material may produce skin sensitisation in predisposed individuals. Care must be taken, when removing gloves and other protective equipment, to avoid all possible skin contact. ‣ Contaminated leather items, such as shoes, belts and watch-bands should be removed and destroyed. The selection of suitable gloves does not only depend on the material, but also on further marks of quality which vary from manufacturer to manufacturer. Where the chemical is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application. The exact break through time for substances has to be obtained from the manufacturer of the protective gloves and has to be observed when making a final choice.
Body protection	See Other protection below
Other protection	‣ Overalls. ‣ P.V.C apron. ‣ Barrier cream.

SECTION 9 Physical and chemical properties

Information on basic physical and chemical properties

Appearance	Epoxy resins are thermosetting polymers, which are crosslinked using hardeners (curing agents). Epoxy is either any of the basic components or the cured end products of epoxy resins, as well as a colloquial name for the epoxide functional group. Epoxy resins, also known as polyepoxides, are a class of reactive prepolymers and polymers which contain at least two epoxide groups. The epoxide group is also sometimes referred to as a glycidyl or oxirane group.. Epoxy resins may be reacted (cross-linked) either with themselves through catalytic homopolymerisation, or with a wide range of co-reactants including polyfunctional amines, acids (and acid anhydrides), phenols, alcohols and thiols. Reactive diluents are generally colourless to yellow/ amber, low viscosity liquids with mild ether-like odour; solubility in water varies across the family. Substitution on the phenolic rings may generate solids. Reactive diluents may contain trace residuals of epichlorohydrin a known skin irritant. Light sensitive.

Vapour density (Air = 1)	Not Available	**VOC g/L**	<5 g/L when mixed as intended

SECTION 10 Stability and reactivity

Reactivity	See section 7
Chemical stability	▸ Unstable in the presence of incompatible materials. ▸ Product is considered stable. ▸ Hazardous polymerisation will not occur.
Possibility of hazardous reactions	See section 7
Conditions to avoid	See section 7
Incompatible materials	See section 7
Hazardous decomposition products	See section 5

SECTION 11 Toxicological information

Information on toxicological effects

Inhaled	The material has **NOT** been classified by EC Directives or other classification systems as "harmful by inhalation" nor has it been designated as "irritating to the respiratory system". This is because of the lack of corroborating animal or human evidence.
Ingestion	The material can produce chemical burns within the oral cavity and gastrointestinal tract following ingestion. The material has **NOT** been classified by EC Directives or other classification systems as "harmful by ingestion". This is because of the lack of corroborating animal or human evidence.
Skin Contact	The material can produce chemical burns following direct contact with the skin. Skin contact is not thought to have harmful health effects (as classified under EC Directives); the material may still produce health damage following entry through wounds, lesions or abrasions. Open cuts, abraded or irritated skin should not be exposed to this material Entry into the blood-stream, through, for example, cuts, abrasions or lesions, may produce systemic injury with harmful effects. Examine the skin prior to the use of the material and ensure that any external damage is suitably protected.
Eye	The material can produce chemical burns to the eye following direct contact. Vapours or mists may be extremely irritating. If applied to the eyes, this material causes severe eye damage.
Chronic	Repeated or long-term occupational exposure is likely to produce cumulative health effects involving organs or biochemical systems. Repeated or prolonged exposure to corrosives may result in the erosion of teeth, inflammatory and ulcerative changes in the mouth and necrosis (rarely) of the jaw. Bronchial irritation, with cough, and frequent attacks of bronchial pneumonia may ensue. Skin contact with the material is more likely to cause a sensitisation reaction in some persons compared to the general population. Ample evidence exists, from results in experimentation, that developmental disorders are directly caused by human exposure to the material.

Legend:	*1. Value obtained from Europe ECHA Registered Substances - Acute toxicity 2. Value obtained from manufacturer's SDS. Unless otherwise specified data extracted from RTECS - Register of Toxic Effect of chemical Substances*	

tetraethylenepentamine	Ethyleneamines are very reactive and can cause chemical burns, skin rashes and asthma-like symptoms. It is readily absorbed through the skin and may cause eye blindness and irreparable damage. As such, they require careful handling. The material may produce moderate eye irritation leading to inflammation. Repeated or prolonged exposure to irritants may produce conjunctivitis. The material may cause severe skin irritation after prolonged or repeated exposure and may produce on contact skin redness, swelling, the production of vesicles, scaling and thickening of the skin. Repeated exposures may produce severe ulceration. For alkyl polyamines: The alkyl polyamines cluster consists of two terminal primary and at least one secondary amine groups and are derivatives of low molecular weight ethylenediamine, propylenediamine or hexanediamine. Toxicity depends on route of exposure. Cluster members have been shown to cause skin irritation or sensitisation, eye irritation and genetic defects, but have not been shown to cause cancer. Triethylenetetramine is a severe irritant to skin and eyes and may induce skin sensitisation. Acute exposure to saturated vapour via inhalation was tolerated without impairment but exposure to aerosol may lead to reversible irritations of the mucous membranes in the airways. Studies done on experimental animals showed that it does not cause cancer or foetal developmental defects. Tetraethylenepentamine (TEPA) has a low acute toxicity when taken orally and a higher toxicity via the dermal route most likely due to the corrosive nature of TEPA to the skin against neutralization by stomach acid. TEPA may be corrosive to the skin and eyes. Long term dermal application may cause thickening of the epidermis and other skin changes.
bis(2-aminopropyl ether) propoxylated	Convulsions, stomach ulceration, haemorrhage, respiratory tract changes, dermatitis after systemic administration recorded. * Reichard ** Bayer Inc. Canada *** Texaco ****Epoxylite Polyethers (such as ethoxylated surfactants and polyethylene glycols) are highly susceptible to being oxidized in the air. They then form complex mixtures of oxidation products. Animal testing reveals that whole the pure, non-oxidised surfactant is non-sensitizing, many of the oxidation products are sensitisers. The oxidization products also cause irritation. The material may produce severe irritation to the eye causing pronounced inflammation. Repeated or prolonged exposure to irritants may produce conjunctivitis. Overexposure to most of these materials may cause adverse health effects. Many amine-based compounds can cause release of histamines, which, in turn, can trigger allergic and other physiological effects, including constriction of the bronchi or asthma and inflammation of the cavity of the nose. Whole-body symptoms include headache, nausea, faintness, anxiety, a decrease in blood pressure, rapid heartbeat, itching, reddening of the skin, urticaria (hives) and swelling of the face, which are usually transient. There are generally four routes of possible or potential exposure: inhalation, skin contact, eye contact, and swallowing. Inhalation: Inhaling vapours may result in moderate to severe irritation of the tissues of the nose and throat and can irritate the lungs. Higher concentrations of certain amines can produce severe respiratory irritation, characterized by discharge from the nose, coughing, difficulty in breathing and chest pain.
Retro-Coat Standard Primer Part A & tetraethylenepentamine	The following information refers to contact allergens as a group and may not be specific to this product. Contact allergies quickly manifest themselves as contact eczema, more rarely as urticaria or Quincke's oedema. The pathogenesis of contact eczema involves a cell-mediated (T lymphocytes) immune reaction of the delayed type.
tetraethylenepentamine & bis(2-aminopropyl ether) propoxylated	Asthma-like symptoms may continue for months or even years after exposure to the material ends. This may be due to a non-allergic condition known as reactive airways dysfunction syndrome (RADS) which can occur after exposure to high levels of highly irritating compound. Main criteria for diagnosing RADS include the absence of previous airways disease in a non-atopic individual, with sudden onset of persistent asthma-like symptoms within minutes to hours of a documented exposure to the irritant.

SECTION 13 Disposal considerations

Waste treatment methods

Product / Packaging disposal	▸ Containers may still present a chemical hazard/ danger when empty. ▸ Return to supplier for reuse/ recycling if possible. Otherwise: ▸ If container can not be cleaned sufficiently well to ensure that residuals do not remain or if the container cannot be used to store the same product, then puncture containers, to prevent re-use, and bury at an authorised landfill. Legislation addressing waste disposal requirements may differ by country, state and/ or territory. Each user must refer to laws operating in their area. In some areas, certain wastes must be tracked. ▸ **DO NOT** allow wash water from cleaning or process equipment to enter drains. ▸ It may be necessary to collect all wash water for treatment before disposal. ▸ In all cases disposal to sewer may be subject to local laws and regulations and these should be considered first. ▸ Recycle wherever possible or consult manufacturer for recycling options. ▸ Consult State Land Waste Management Authority for disposal. ▸ Bury residue in an authorised landfill.

SECTION 14 Transport information

Labels Required

Marine Pollutant	NO

Shipping container and transport vehicle placarding and labeling may vary from the below information. Products that are regulated for transport will be packaged and marked as

Continued...

Dangerous Goods in Excepted Quantities according to US DOT, IATA and IMDG regulations. In case of reshipment, it is the responsibility of the shipper to determine the appropriate labels and markings in accordance with applicable transport regulations.

Land transport (DOT): NOT REGULATED FOR TRANSPORT OF DANGEROUS GOODS

Air transport (ICAO-IATA / DGR): NOT REGULATED FOR TRANSPORT OF DANGEROUS GOODS

Sea transport (IMDG-Code / GGVSee): NOT REGULATED FOR TRANSPORT OF DANGEROUS GOODS

Transport in bulk according to Annex II of MARPOL and the IBC code

Not Applicable

Transport in bulk in accordance with MARPOL Annex V and the IMSBC Code

SDS Version Summary

Version	Date of Update	Sections Updated
2.3	04/24/2023	Toxicological information - Acute Health (eye), Toxicological information - Acute Health (inhaled), Toxicological information - Acute Health (skin), Toxicological information - Acute Health (swallowed), Toxicological information - Chronic Health, Hazards identification - Classification, Exposure controls / personal protection - Engineering Control, Ecological Information - Environmental, First Aid measures - First Aid (inhaled), First Aid measures - First Aid (skin), First Aid measures - First Aid (swallowed), Composition / information on ingredients - Ingredients, Exposure controls / personal protection - Personal Protection (eye), Exposure controls / personal protection - Personal Protection (hands/feet)

Other information

Classification of the preparation and its individual components has drawn on official and authoritative sources as well as independent review by the Chemwatch Classification committee using available literature references.
The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios.

SECTION 2 Hazard(s) identification

Classification of the substance or mixture

NFPA 704 diamond

Note: The hazard category numbers found in GHS classification in section 2 of this SDSs are NOT to be used to fill in the NFPA 704 diamond. Blue = Health Red = Fire Yellow = Reactivity White = Special (Oxidizer or water reactive substances)

Classification	Reproductive Toxicity Category 1A, Hazardous to the Aquatic Environment Long-Term Hazard Category 2, Specific Target Organ Toxicity - Repeated Exposure Category 2, Skin Corrosion/Irritation Category 2, Germ Cell Mutagenicity Category 2, Sensitisation (Skin) Category 1B

Label elements

Hazard pictogram(s)	
Signal word	**Danger**

Hazard statement(s)

H360	May damage fertility or the unborn child.

Page 1 continued...

H411	Toxic to aquatic life with long lasting effects.
H373	May cause damage to organs through prolonged or repeated exposure.
H315	Causes skin irritation.
H341	Suspected of causing genetic defects.
H317	May cause an allergic skin reaction.

Hazard(s) not otherwise classified

Not Applicable

Precautionary statement(s) General

P101	If medical advice is needed, have product container or label at hand.
P102	Keep out of reach of children.
P103	Read label before use.

Precautionary statement(s) Prevention

P201	Obtain special instructions before use.
P260	Do not breathe mist/vapours/spray.
P280	Wear protective gloves and protective clothing.
P273	Avoid release to the environment.
P202	Do not handle until all safety precautions have been read and understood.
P264	Wash all exposed external body areas thoroughly after handling.
P272	Contaminated work clothing must not be allowed out of the workplace.

Precautionary statement(s) Response

P308+P313	IF exposed or concerned: Get medical advice/ attention.
P314	Get medical advice/attention if you feel unwell.
P333+P313	If skin irritation or rash occurs: Get medical advice/attention.
P391	Collect spillage.
P302+P352	IF ON SKIN: Wash with plenty of water.
P332+P313	If skin irritation occurs: Get medical advice/attention.
P362+P364	Take off contaminated clothing and wash it before reuse.

Precautionary statement(s) Storage

P405	Store locked up.

Precautionary statement(s) Disposal

P501	Dispose of contents/container to authorised hazardous or special waste collection point in accordance with any local regulation.

SECTION 3 Composition / information on ingredients

Substances

See section below for composition of Mixtures

Mixtures

CAS No	%[weight]	Name
25085-99-8	80-100	bisphenol A diglycidyl ether polymer
2210-79-9	1-5	o-cresyl glycidyl ether

The specific chemical identity and/or exact percentage (concentration) of composition has been withheld as a trade secret.

SECTION 4 First-aid measures

Description of first aid measures

Eye Contact	If this product comes in contact with the eyes: ▸ Wash out immediately with fresh running water. ▸ Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally lifting the upper and lower lids. ▸ Seek medical attention without delay; if pain persists or recurs seek medical attention. ▸ Removal of contact lenses after an eye injury should only be undertaken by skilled personnel.
Skin Contact	If skin contact occurs: ▸ Immediately remove all contaminated clothing, including footwear. ▸ Flush skin and hair with running water (and soap if available). ▸ Seek medical attention in event of irritation.

Continued...

Inhalation	▸ If fumes or combustion products are inhaled remove from contaminated area. ▸ Lay patient down. Keep warm and rested. ▸ Prostheses such as false teeth, which may block airway, should be removed, where possible, prior to initiating first aid procedures. ▸ Apply artificial respiration if not breathing, preferably with a demand valve resuscitator, bag-valve mask device, or pocket mask as trained. Perform CPR if necessary. ▸ Transport to hospital, or doctor.
Ingestion	▸ **IF SWALLOWED, REFER FOR MEDICAL ATTENTION, WHERE POSSIBLE, WITHOUT DELAY.** ▸ For advice, contact a Poisons Information Centre or a doctor. ▸ Urgent hospital treatment is likely to be needed. ▸ In the mean time, qualified first-aid personnel should treat the patient following observation and employing supportive measures as indicated by the patient's condition. ▸ If the services of a medical officer or medical doctor are readily available, the patient should be placed in his/her care and a copy of the SDS should be provided. Further action will be the responsibility of the medical specialist. ▸ If medical attention is not available on the worksite or surroundings send the patient to a hospital together with a copy of the SDS. **Where medical attention is not immediately available or where the patient is more than 15 minutes from a hospital or unless instructed otherwise:** ▸ **INDUCE** vomiting with fingers down the back of the throat, **ONLY IF CONSCIOUS**. Lean patient forward or place on left side (head-down position, if possible) to maintain open airway and prevent aspiration. **NOTE:** Wear a protective glove when inducing vomiting by mechanical means.

Most important symptoms and effects, both acute and delayed

See Section 11

Indication of any immediate medical attention and special treatment needed

As in all cases of suspected poisoning, follow the ABCDEs of emergency medicine (airway, breathing, circulation, disability, exposure), then the ABCDEs of toxicology (antidotes, basics, change absorption, change distribution, change elimination).
For poisons (where specific treatment regime is absent):

BASIC TREATMENT

- Establish a patent airway with suction where necessary.
- Watch for signs of respiratory insufficiency and assist ventilation as necessary.
- Administer oxygen by non-rebreather mask at 10 to 15 L/min.
- Monitor and treat, where necessary, for pulmonary oedema.
- Monitor and treat, where necessary, for shock.
- Anticipate seizures.
- **DO NOT** use emetics. Where ingestion is suspected rinse mouth and give up to 200 ml water (5 ml/kg recommended) for dilution where patient is able to swallow, has a strong gag reflex and does not drool.

ADVANCED TREATMENT

- Consider orotracheal or nasotracheal intubation for airway control in unconscious patient or where respiratory arrest has occurred.
- Positive-pressure ventilation using a bag-valve mask might be of use.
- Monitor and treat, where necessary, for arrhythmias.
- Start an IV D5W TKO. If signs of hypovolaemia are present use lactated Ringers solution. Fluid overload might create complications.
- Drug therapy should be considered for pulmonary oedema.
- Hypotension with signs of hypovolaemia requires the cautious administration of fluids. Fluid overload might create complications.
- Treat seizures with diazepam.
- Proparacaine hydrochloride should be used to assist eye irrigation.

BRONSTEIN, A.C. and CURRANCE, P.L.
EMERGENCY CARE FOR HAZARDOUS MATERIALS EXPOSURE: 2nd Ed. 1994
Treat symptomatically.

SECTION 5 Fire-fighting measures

Extinguishing media

- Foam.
- Dry chemical powder.

Special hazards arising from the substrate or mixture

Fire Incompatibility	▸ Avoid contamination with oxidising agents i.e. nitrates, oxidising acids, chlorine bleaches, pool chlorine etc. as ignition may result

Special protective equipment and precautions for fire-fighters

Fire Fighting	▸ Alert Fire Brigade and tell them location and nature of hazard. ▸ Wear full body protective clothing with breathing apparatus.
Fire/Explosion Hazard	▸ Combustible. ▸ Slight fire hazard when exposed to heat or flame. Combustion products include: carbon dioxide (CO_2) aldehydes other pyrolysis products typical of burning organic material.

SECTION 6 Accidental release measures

Continued...

Personal precautions, protective equipment and emergency procedures

See section 8

Environmental precautions

See section 12

Methods and material for containment and cleaning up

Minor Spills	▸ In the event of a spill of a reactive diluent, the focus is on containing the spill to prevent contamination of soil and surface or ground water. ▸ If irritating vapors are present, an approved air-purifying respirator with organic vapor canister is recommended for cleaning up spills and leaks. Environmental hazard - contain spillage. ▸ Clean up all spills immediately. ▸ Avoid breathing vapours and contact with skin and eyes.
Major Spills	Environmental hazard - contain spillage. Industrial spills or releases of reactive diluents are infrequent and generally contained. If a large spill does occur, the material should be captured, collected, and reprocessed or disposed of according to applicable governmental requirements. Moderate hazard. ▸ Clear area of personnel and move upwind.

Personal Protective Equipment advice is contained in Section 8 of the SDS.

SECTION 7 Handling and storage

Precautions for safe handling

Safe handling	▸ Avoid all personal contact, including inhalation. ▸ Wear protective clothing when risk of exposure occurs. ▸ **DO NOT** allow clothing wet with material to stay in contact with skin
Other information	▸ Store in original containers. ▸ Keep containers securely sealed.

Conditions for safe storage, including any incompatibilities

Suitable container	▸ Metal can or drum ▸ Packaging as recommended by manufacturer. ▸ Check all containers are clearly labelled and free from leaks.
Storage incompatibility	In general, uncured epoxy resins have only poor mechanical, chemical and heat resistance properties. However, good properties are obtained by reacting the linear epoxy resin with suitable curatives to form three-dimensional cross-linked thermoset structures. Epoxides: ▸ are highly reactive with acids, bases, and oxidising and reducing agents. ▸ react, possibly violently, with anhydrous metal chlorides, ammonia, amines and group 1 metals. Glycidyl ethers: ▸ may form unstable peroxides on storage in air ,light, sunlight, UV light or other ionising radiation, trace metals - inhibitor should be maintained at adequate levels ▸ may polymerise in contact with heat, organic and inorganic free radical producing initiators ▸ may polymerise with evolution of heat in contact with oxidisers, strong acids, bases and amines ▸ react violently with strong oxidisers, permanganates, peroxides, acyl halides, alkalis, ammonium persulfate, bromine dioxide ▸ attack some forms of plastics, coatings, and rubber Reactive diluents are stable under recommended storage conditions, but can decompose at elevated temperatures.In some cases, decomposition can cause pressure build-up in closed systems. ▸ Avoid cross contamination between the two liquid parts of product (kit). ▸ If two part products are mixed or allowed to mix in proportions other than manufacturer's recommendation, polymerisation with gelation and evolution of heat (exotherm) may occur. ▸ Avoid reaction with amines, mercaptans, strong acids and oxidising agents

SECTION 8 Exposure controls / personal protection

Control parameters

Occupational Exposure Limits (OEL)

INGREDIENT DATA

Not Available

Emergency Limits

Ingredient	TEEL-1	TEEL-2	TEEL-3

Occupational Exposure Banding

Ingredient	Occupational Exposure Band Rating	Occupational Exposure Band Limit

Continued...

Ingredient	Occupational Exposure Band Rating	Occupational Exposure Band Limit
bisphenol A diglycidyl ether polymer	E	≤ 0.1 ppm
o-cresyl glycidyl ether	E	≤ 0.1 ppm
Notes:	*Occupational exposure banding is a process of assigning chemicals into specific categories or bands based on a chemical's potency and the adverse health outcomes associated with exposure. The output of this process is an occupational exposure band (OEB), which corresponds to a range of exposure concentrations that are expected to protect worker health.*	

Exposure controls

Appropriate engineering controls	Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection.
Individual protection measures, such as personal protective equipment	
Eye and face protection	‣ Safety glasses with side shields. ‣ Chemical goggles.
Skin protection	See Hand protection below
Hands/feet protection	**NOTE:** ‣ The material may produce skin sensitisation in predisposed individuals. Care must be taken, when removing gloves and other protective equipment, to avoid all possible skin contact. The selection of suitable gloves does not only depend on the material, but also on further marks of quality which vary from manufacturer to manufacturer. Where the chemical is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application. When handling liquid-grade epoxy resins wear chemically protective gloves , boots and aprons. The performance, based on breakthrough times ,of: · Ethyl Vinyl Alcohol (EVAL laminate) is generally excellent · Butyl Rubber ranges from excellent to good · Nitrile Butyl Rubber (NBR) from excellent to fair. ‣ **DO NOT** use solvent to clean the skin
Body protection	See Other protection below
Other protection	‣ Overalls. ‣ P.V.C apron.

Respiratory protection

Type A-P Filter of sufficient capacity. (AS/NZS 1716 & 1715, EN 143:2000 & 149:2001, ANSI Z88 or national equivalent)

- Cartridge respirators should never be used for emergency ingress or in areas of unknown vapour concentrations or oxygen content.
- The wearer must be warned to leave the contaminated area immediately on detecting any odours through the respirator. The odour may indicate that the mask is not functioning properly, that the vapour concentration is too high, or that the mask is not properly fitted. Because of these limitations, only restricted use of cartridge respirators is considered appropriate.
- Cartridge performance is affected by humidity. Cartridges should be changed after 2 hr of continuous use unless it is determined that the humidity is less than 75%, in which case, cartridges can be used for 4 hr. Used cartridges should be discarded daily, regardless of the length of time used

SECTION 9 Physical and chemical properties

Information on basic physical and chemical properties

Appearance	Epoxy resins are thermosetting polymers, which are crosslinked using hardeners (curing agents). Epoxy is either any of the basic components or the cured end products of epoxy resins, as well as a colloquial name for the epoxide functional group. Epoxy resins, also known as polyepoxides, are a class of reactive prepolymers and polymers which contain at least two epoxide groups. Reactive diluents are generally colourless to yellow/ amber, low viscosity liquids with mild ether-like odour; solubility in water varies across the family. Substitution on the phenolic rings may generate solids. Bisphenol A epoxy resin. Important epoxy resins are produced from combining epichlorohydrin and bisphenol A to give bisphenol A diglycidyl ethers. Increasing the ratio of bisphenol A to epichlorohydrin during manufacture produces higher molecular weight linear polyethers with glycidyl end groups, which are semi-solid to hard crystalline materials at room temperature depending on the molecular weight achieved. As the molecular weight of the resin increases, the epoxide content reduces and the material behaves more and more like a thermoplastic. Epoxy resins are thermosetting polymers, which are crosslinked using hardeners (curing agents). Epoxy is either any of the basic components or the cured end products of epoxy resins, as well as a colloquial name for the epoxide functional group. Epoxy resins, also known as polyepoxides, are a class of reactive prepolymers and polymers which contain at least two epoxide groups. Reactive diluents are generally colourless to yellow/ amber, low viscosity liquids with mild ether-like odour; solubility in water varies across the family. Substitution on the phenolic rings may generate solids. Light sensitive.

SECTION 10 Stability and reactivity

Reactivity	See section 7
Chemical stability	▸ Unstable in the presence of incompatible materials. ▸ Product is considered stable.
Possibility of hazardous reactions	See section 7
Conditions to avoid	See section 7
Incompatible materials	See section 7
Hazardous decomposition products	See section 5

SECTION 11 Toxicological information

Information on toxicological effects

Inhaled	The material is not thought to produce respiratory irritation (as classified by EC Directives using animal models). Nevertheless inhalation of vapours, fumes or aerosols, especially for prolonged periods, may produce respiratory discomfort and occasionally, distress. In animal testing, exposure to aerosols of reactive diluents (especially o-cresol glycidyl ether, CAS RN:2210-79-9) has been reported to affect the adrenal gland, central nervous system, kidney, liver, ovaries, spleen, testes, thymus and respiratory tract. Inhalation hazard is increased at higher temperatures. Inhalation of aerosols (mists, fumes), generated by the material during the course of normal handling, may be harmful.
Ingestion	Accidental ingestion of the material may be harmful; animal experiments indicate that ingestion of less than 150 gram may be fatal or may produce serious damage to the health of the individual. Reactive diluents exhibit a range of ingestion hazards. Small amounts swallowed incidental to normal handling operations are not likely to cause injury. Animal testing showed that a single dose of bisphenol A diglycidyl ether (BADGE) given by mouth, caused an increase in immature sperm.
Skin Contact	Skin contact with the material may be harmful; systemic effects may result following absorption. This material can cause inflammation of the skin on contact in some persons. The material may accentuate any pre-existing dermatitis condition Bisphenol A diglycidyl ether (BADGE) may produce contact dermatitis characterized by redness and swelling, with weeping followed by crusting and scaling. A liquid resin with a molecular weight of 350 produced severe skin irritation when applied daily for 4 hours over 20 days. Skin contact with reactive diluents may cause slight to moderate irritation with local redness. Repeated or prolonged skin contact may cause burns. Open cuts, abraded or irritated skin should not be exposed to this material Entry into the blood-stream, through, for example, cuts, abrasions or lesions, may produce systemic injury with harmful effects. Examine the skin prior to the use of the material and ensure that any external damage is suitably protected.
Eye	Although the liquid is not thought to be an irritant (as classified by EC Directives), direct contact with the eye may produce transient discomfort characterised by tearing or conjunctival redness (as with windburn). Eye contact with reactive diluents may cause slight to severe irritation with the possibility of chemical burns or moderate to severe damage to the cornea.
Chronic	Repeated or long-term occupational exposure is likely to produce cumulative health effects involving organs or biochemical systems. Strong evidence exists that this substance may cause irreversible mutations (though not lethal) even following a single exposure. Skin contact with the material is more likely to cause a sensitisation reaction in some persons compared to the general population. Ample evidence exists that this material directly causes reduced fertility Glycidyl ethers can cause genetic damage and cancer. Bisphenol A diglycidyl ethers (BADGEs) produce a sensitization dermatitis (skin inflammation) characterized by eczema with blisters and papules, with considerable itching of the back of the hand. This may persist for 10-14 days after withdrawal from exposure and recur immediately on re-exposure. For some reactive diluents, prolonged or repeated skin contact may result in absorption of potentially harmful amounts or allergic skin reactions. Exposure to some reactive diluents (notably, neopentylglycol diglycidyl ether, CAS RN: 17557-23-2) has caused cancer in some animal testing. There has been some concern that this material can cause cancer or mutations but there is not enough data to make an assessment.

BISPHENOL A DIGLYCIDYL ETHER POLYMER	Bisphenol A diglycidyl ethers (BADGEs) produce a sensitization dermatitis (skin inflammation) characterized by eczema with blisters and papules, with considerable itching of the back of the hand. This may persist for 10-14 days after withdrawal from exposure and recur immediately on re-exposure. The chemical structure of hydroxylated diphenylalkanes or bisphenols consists of two phenolic rings joined together through a bridging carbon. This class of endocrine disruptors that mimic oestrogens is widely used in industry, particularly in plastics. Bisphenol A (BPA) and some related compounds exhibit oestrogenic activity in human breast cancer cell line MCF-7, but there were remarkable differences in activity. Bisphenol A may have effects similar to female sex hormones and when administered to pregnant women, may damage the foetus. It may also damage male reproductive organs and sperm. Glycidyl ethers can cause genetic damage and cancer. The substance is classified by IARC as Group 3: **NOT** classifiable as to its carcinogenicity to humans. Evidence of carcinogenicity may be inadequate or limited in animal testing. * [Reichold]; ** [Epoxylite Corp.]; for monomer
O-CRESYL GLYCIDYL ETHER	o-CGE is a direct-acting mutagen in in-vitro test systems. Studies in vivo, including micronucleus tests and assays in transgenic animals, showed no mutagenic activity. Causes sensitisation * * Huntsman Araldite DY-K/ CH SDS
Retro-Coat Standard Primer Part B & O-CRESYL GLYCIDYL ETHER	Laboratory (in vitro) and animal studies show, exposure to the material may result in a possible risk of irreversible effects, with the possibility of producing mutation.
Retro-Coat Standard Primer Part B & BISPHENOL A DIGLYCIDYL ETHER POLYMER & O-CRESYL GLYCIDYL ETHER	The following information refers to contact allergens as a group and may not be specific to this product. Contact allergies quickly manifest themselves as contact eczema, more rarely as urticaria or Quincke's oedema. Oxiranes (including glycidyl ethers and alkyl oxides, and epoxides) share many common characteristics with respect to animal toxicology. One such oxirane is ethyloxirane; data presented here may be taken as representative.
Retro-Coat Standard Primer Part B & BISPHENOL A DIGLYCIDYL ETHER POLYMER	Animal testing over 13 weeks showed bisphenol A diglycidyl ether (BADGE) caused mild to moderate, chronic, inflammation of the skin. Reproductive and Developmental Toxicity: Animal testing showed BADGE given over several months caused reduction in body weight but had no reproductive effects.
BISPHENOL A DIGLYCIDYL ETHER POLYMER & O-CRESYL GLYCIDYL ETHER	For 1,2-butylene oxide (ethyloxirane): In animal testing, ethyloxirane increased the incidence of tumours of the airways in animals exposed via inhalation. However, tumours were not observed in mice chronically exposed via skin.

ECETOC Aquatic Hazard Assessment Data 6. NITE (Japan) - Bioconcentration Data 7. METI (Japan) - Bioconcentration Data 8. Vendor Data*

Toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.
Do NOT allow product to come in contact with surface waters or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment wash-waters.
Liquid epoxy resins and some reactive diluents are not readily biodegradable, although its epoxy functional groups are hydrolysed in contact with water, they have the potential to bio-accumulate and are moderately toxic to aquatic organisms. They are generally classified as dangerous for the environment according to the European Union classification criteria.
Reactive diluents generally have a low to moderate potential for bioconcentration (tendency to accumulate in the food chain) and a high to very high potential for mobility in soil. Small amounts that escape to the atmosphere will photodegrade.
Environmental toxicity is a function of the n-octanol/water partition coefficient (log Pow, log Kow). Compounds with log Pow >5 act as neutral organics, but at a lower log Pow, the toxicity of epoxide-containing polymers is greater than that predicted for simple narcotics.
Significant environmental findings are limited. Oxiranes (including glycidyl ethers and alkyl oxides, and epoxides) exhibit common characteristics with respect to environmental fate and ecotoxicology.
For 1,2-Butylene oxide (Ethyloxirane):
log Kow values of 0.68 and 0.86. BAF and BCF : 1 to 17 L./kg.
DO NOT discharge into sewer or waterways.

Mobility in soil

Ingredient	Mobility
bisphenol A diglycidyl ether polymer	LOW (KOC = 51.43)
o-cresyl glycidyl ether	LOW (KOC = 67.93)

SECTION 13 Disposal considerations

Waste treatment methods

Product / Packaging disposal	▸ Containers may still present a chemical hazard/ danger when empty. ▸ Return to supplier for reuse/ recycling if possible. Waste Management Production waste from epoxy resins and resin systems should be treated as hazardous waste in accordance with National regulations. Fire retarded resins containing halogenated compounds should also be treated as special waste. Legislation addressing waste disposal requirements may differ by country, state and/ or territory. Each user must refer to laws operating in their area. ▸ **DO NOT** allow wash water from cleaning or process equipment to enter drains. ▸ It may be necessary to collect all wash water for treatment before disposal. ▸ Recycle wherever possible or consult manufacturer for recycling options. ▸ Consult State Land Waste Management Authority for disposal.

SECTION 14 Transport information

Labels Required

	
Marine Pollutant	

Shipping container and transport vehicle placarding and labeling may vary from the below information. Products that are regulated for transport will be packaged and marked as Dangerous Goods in Excepted Quantities according to US DOT, IATA and IMDG regulations. In case of reshipment, it is the responsibility of the shipper to determine the appropriate

SECTION 15 Regulatory information

Safety, health and environmental regulations / legislation specific for the substance or mixture

bisphenol A diglycidyl ether polymer is found on the following regulatory lists

Chemical Footprint Project - Chemicals of High Concern List
US Toxic Substances Control Act (TSCA) - Chemical Substance Inventory

o-cresyl glycidyl ether is found on the following regulatory lists

US Toxic Substances Control Act (TSCA) - Chemical Substance Inventory

Federal Regulations

Superfund Amendments and Reauthorization Act of 1986 (SARA)

Section 311/312 hazard categories

Flammable (Gases, Aerosols, Liquids, or Solids)	No
Gas under pressure	No
Explosive	No
Self-heating	No
Pyrophoric (Liquid or Solid)	No
Pyrophoric Gas	No
Corrosive to metal	No
Oxidizer (Liquid, Solid or Gas)	No
Organic Peroxide	No
Self-reactive	No
In contact with water emits flammable gas	No
Combustible Dust	No
Carcinogenicity	No
Acute toxicity (any route of exposure)	No
Reproductive toxicity	Yes
Skin Corrosion or Irritation	Yes
Respiratory or Skin Sensitization	Yes
Serious eye damage or eye irritation	No
Specific target organ toxicity (single or repeated exposure)	Yes
Aspiration Hazard	No
Germ cell mutagenicity	Yes
Simple Asphyxiant	No
Hazards Not Otherwise Classified	No

US. EPA CERCLA Hazardous Substances and Reportable Quantities (40 CFR 302.4)

None Reported

Revision Date	04/17/2023
Initial Date	11/06/2020

CONTACT POINT

PLEASE NOTE THAT TITANIUM DIOXIDE IS NOT PRESENT IN CLEAR OR NEUTRAL BASES

SDS Version Summary

Version	Date of Update	Sections Updated
1.2	04/17/2023	Composition / information on ingredients - Ingredients

Other information

Classification of the preparation and its individual components has drawn on official and authoritative sources as well as independent review by the Chemwatch Classification committee using available literature references.
The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings.

Definitions and abbreviations

PC—TWA: Permissible Concentration-Time Weighted Average
PC—STEL: Permissible Concentration-Short Term Exposure Limit
IARC: International Agency for Research on Cancer
ACGIH: American Conference of Governmental Industrial Hygienists
STEL: Short Term Exposure Limit
TEEL: Temporary Emergency Exposure Limit。
IDLH: Immediately Dangerous to Life or Health Concentrations
ES: Exposure Standard
OSF: Odour Safety Factor
NOAEL :No Observed Adverse Effect Level
LOAEL: Lowest Observed Adverse Effect Level
TLV: Threshold Limit Value
LOD: Limit Of Detection
OTV: Odour Threshold Value
BCF: BioConcentration Factors
BEI: Biological Exposure Index
AIIC: Australian Inventory of Industrial Chemicals
DSL: Domestic Substances List
NDSL: Non-Domestic Substances List
IECSC: Inventory of Existing Chemical Substance in China
EINECS: European INventory of Existing Commercial chemical Substances
ELINCS: European List of Notified Chemical Substances
NLP: No-Longer Polymers
ENCS: Existing and New Chemical Substances Inventory
KECI: Korea Existing Chemicals Inventory

SECTION 1 Identification

Product Identifier

Product name	Retro-Coat Clear Part A
Synonyms	Not Available
Proper shipping name	Environmentally hazardous substance, liquid, n.o.s.(contains Liquid Epoxy Resin)
Other means of identification	Not Available

Recommended use of the chemical and restrictions on use

Relevant identified uses	Specialty flooring resin

Name, address, and telephone number of the chemical manufacturer, importer, or other responsible party

Registered company name	**Land Science, a division of REGENESIS**
Address	1011 Calle Sombra San Clemente CA 92673 United States
Telephone	949-481-8118
Fax	949-366-8090
Website	landsciencetech.com
Email	CustomerService@LandScienceTech.com

Emergency phone number

Association / Organisation	**CHEMTREC 24/7**
Emergency telephone numbers	1-800-424-9300 (USA and Canada)
Other emergency telephone numbers	1-703-527-3887 (International

SECTION 2 Hazard(s) identification

Classification of the substance or mixture

Note: The hazard category numbers found in GHS classification in section 2 of this SDSs are NOT to be used to fill in the NFPA 704 diamond. Blue = Health Red = Fire Yellow = Reactivity White = Special (Oxidizer or water reactive substances)

Classification	Serious Eye Damage/Eye Irritation Category 2A, Reproductive Toxicity Category 1A, Hazardous to the Aquatic Environment Long-Term Hazard Category 2, Specific Target Organ Toxicity - Repeated Exposure Category 2, Skin Corrosion/Irritation Category 2, Sensitisation (Skin) Category 1, Germ Cell Mutagenicity Category 2

Label elements

Hazard pictogram(s)	
Signal word	**Danger**

Hazard statement(s)

H319	Causes serious eye irritation.

Page 1 continued...

H360	May damage fertility or the unborn child.
H411	Toxic to aquatic life with long lasting effects.
H373	May cause damage to organs through prolonged or repeated exposure.
H315	Causes skin irritation.
H317	May cause an allergic skin reaction.
H341	Suspected of causing genetic defects.

Hazard(s) not otherwise classified

Not Applicable

Precautionary statement(s) Prevention

P201	Obtain special instructions before use.
P260	Do not breathe mist/vapours/spray.
P280	Wear protective gloves, protective clothing, eye protection and face protection.
P273	Avoid release to the environment.
P202	Do not handle until all safety precautions have been read and understood.
P264	Wash all exposed external body areas thoroughly after handling.
P272	Contaminated work clothing must not be allowed out of the workplace.

Precautionary statement(s) Response

P308+P313	IF exposed or concerned: Get medical advice/ attention.
P305+P351+P338	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
P314	Get medical advice/attention if you feel unwell.
P333+P313	If skin irritation or rash occurs: Get medical advice/attention.
P337+P313	If eye irritation persists: Get medical advice/attention.
P391	Collect spillage.
P302+P352	IF ON SKIN: Wash with plenty of water and soap.
P332+P313	If skin irritation occurs: Get medical advice/attention.
P362+P364	Take off contaminated clothing and wash it before reuse.

Precautionary statement(s) Storage

P405	Store locked up.

Precautionary statement(s) Disposal

P501	Dispose of contents/container to authorised hazardous or special waste collection point in accordance with any local regulation.

SECTION 3 Composition / information on ingredients

Substances

See section below for composition of Mixtures

Mixtures

CAS No	%[weight]	Name
9003-36-5	65-85	phenol/ formaldehyde glycidyl ether copolymer
28064-14-4	5-10	bisphenol F diglycidyl ether copolymer
2210-79-9	5-10	o-cresyl glycidyl ether

The specific chemical identity and/or exact percentage (concentration) of composition has been withheld as a trade secret.

SECTION 4 First-aid measures

Description of first aid measures

Eye Contact	If this product comes in contact with the eyes: ▸ Wash out immediately with fresh running water. ▸ Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally lifting the upper and lower lids. ▸ Seek medical attention without delay; if pain persists or recurs seek medical attention. ▸ Removal of contact lenses after an eye injury should only be undertaken by skilled personnel.
Skin Contact	If skin contact occurs: ▸ Immediately remove all contaminated clothing, including footwear. ▸ Flush skin and hair with running water (and soap if available). ▸ Seek medical attention in event of irritation.
Inhalation	▸ If fumes, aerosols or combustion products are inhaled remove from contaminated area. ▸ Other measures are usually unnecessary.

Continued...

Ingestion	▸ If swallowed do **NOT** induce vomiting. ▸ If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain open airway and prevent aspiration. ▸ Observe the patient carefully. ▸ Never give liquid to a person showing signs of being sleepy or with reduced awareness; i.e. becoming unconscious. ▸ Give water to rinse out mouth, then provide liquid slowly and as much as casualty can comfortably drink. ▸ Seek medical advice.

Most important symptoms and effects, both acute and delayed

See Section 11

Indication of any immediate medical attention and special treatment needed

Treat symptomatically.

SECTION 5 Fire-fighting measures

Extinguishing media

- Foam.
- Dry chemical powder.
- BCF (where regulations permit).

Special hazards arising from the substrate or mixture

Fire Incompatibility	▸ Avoid contamination with oxidising agents i.e. nitrates, oxidising acids, chlorine bleaches, pool chlorine etc. as ignition may result

Special protective equipment and precautions for fire-fighters

Fire Fighting	▸ Alert Fire Brigade and tell them location and nature of hazard. ▸ Wear full body protective clothing with breathing apparatus. ▸ Prevent, by any means available, spillage from entering drains or water course.
Fire/Explosion Hazard	▸ Combustible. ▸ Slight fire hazard when exposed to heat or flame. ▸ Heating may cause expansion or decomposition leading to violent rupture of containers. Combustion products include: carbon dioxide (CO_2) aldehydes other pyrolysis products typical of burning organic material.

SECTION 6 Accidental release measures

Personal precautions, protective equipment and emergency procedures

See section 8

Environmental precautions

See section 12

Methods and material for containment and cleaning up

Minor Spills	▸ In the event of a spill of a reactive diluent, the focus is on containing the spill to prevent contamination of soil and surface or ground water. ▸ If irritating vapors are present, an approved air-purifying respirator with organic vapor canister is recommended for cleaning up spills and leaks. ▸ For small spills, reactive diluents should be absorbed with sand. Environmental hazard - contain spillage. ▸ Clean up all spills immediately. ▸ Avoid breathing vapours and contact with skin and eyes. ▸ Control personal contact with the substance, by using protective equipment.
Major Spills	Environmental hazard - contain spillage. Industrial spills or releases of reactive diluents are infrequent and generally contained. If a large spill does occur, the material should be captured, collected, and reprocessed or disposed of according to applicable governmental requirements. An approved air-purifying respirator with organic-vapor canister is recommended for emergency work. Moderate hazard. ▸ Clear area of personnel and move upwind. ▸ Alert Fire Brigade and tell them location and nature of hazard.

Personal Protective Equipment advice is contained in Section 8 of the SDS.

SECTION 7 Handling and storage

Precautions for safe handling

Safe handling	▸ Avoid all personal contact, including inhalation. ▸ Wear protective clothing when risk of exposure occurs. ▸ Use in a well-ventilated area. ▸ **DO NOT** allow clothing wet with material to stay in contact with skin

Continued...

Other information	▸ Store in original containers. ▸ Keep containers securely sealed. ▸ Store in a cool, dry, well-ventilated area.

Conditions for safe storage, including any incompatibilities

Suitable container	▸ Metal can or drum ▸ Packaging as recommended by manufacturer. ▸ Check all containers are clearly labelled and free from leaks.
Storage incompatibility	Epoxides: ▸ are highly reactive with acids, bases, and oxidising and reducing agents. ▸ react, possibly violently, with anhydrous metal chlorides, ammonia, amines and group 1 metals. ▸ may polymerise in the presence of peroxides or heat - polymerisation may be violent ▸ may react, possibly violently, with water in the presence of acids and other catalysts. ▸ Phenols are incompatible with strong reducing substances such as hydrides, nitrides, alkali metals, and sulfides. ▸ Avoid use of aluminium, copper and brass alloys in storage and process equipment. ▸ Heat is generated by the acid-base reaction between phenols and bases. Glycidyl ethers: ▸ may form unstable peroxides on storage in air ,light, sunlight, UV light or other ionising radiation, trace metals - inhibitor should be maintained at adequate levels ▸ may polymerise in contact with heat, organic and inorganic free radical producing initiators ▸ may polymerise with evolution of heat in contact with oxidisers, strong acids, bases and amines ▸ react violently with strong oxidisers, permanganates, peroxides, acyl halides, alkalis, ammonium persulfate, bromine dioxide ▸ attack some forms of plastics, coatings, and rubber Reactive diluents are stable under recommended storage conditions, but can decompose at elevated temperatures.In some cases, decomposition can cause pressure build-up in closed systems. ▸ Avoid cross contamination between the two liquid parts of product (kit). ▸ If two part products are mixed or allowed to mix in proportions other than manufacturer's recommendation, polymerisation with gelation and evolution of heat (exotherm) may occur. ▸ This excess heat may generate toxic vapour ▸ Avoid reaction with amines, mercaptans, strong acids and oxidising agents

SECTION 8 Exposure controls / personal protection

Control parameters

Occupational Exposure Limits (OEL)

INGREDIENT DATA

Not Available

Emergency Limits

Ingredient	TEEL-1	TEEL-2	TEEL-3
bisphenol F diglycidyl ether copolymer	30 mg/m3	330 mg/m3	2,000 mg/m3

Ingredient	Original IDLH	Revised IDLH
phenol/ formaldehyde glycidyl ether copolymer	Not Available	Not Available
bisphenol F diglycidyl ether copolymer	Not Available	Not Available
o-cresyl glycidyl ether	Not Available	Not Available

Occupational Exposure Banding

Ingredient	Occupational Exposure Band Rating	Occupational Exposure Band Limit
phenol/ formaldehyde glycidyl ether copolymer	E	≤ 0.1 ppm
bisphenol F diglycidyl ether copolymer	E	≤ 0.1 ppm
o-cresyl glycidyl ether	E	≤ 0.1 ppm
Notes:	*Occupational exposure banding is a process of assigning chemicals into specific categories or bands based on a chemical's potency and the adverse health outcomes associated with exposure. The output of this process is an occupational exposure band (OEB), which corresponds to a range of exposure concentrations that are expected to protect worker health.*	

Exposure controls

Appropriate engineering controls	Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection. The basic types of engineering controls are: Process controls which involve changing the way a job activity or process is done to reduce the risk.
Individual protection measures, such as personal protective equipment	

Continued...

Eye and face protection	▸ Safety glasses with side shields. ▸ Chemical goggles. ▸ Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants.
Skin protection	See Hand protection below
Hands/feet protection	**NOTE:** ▸ The material may produce skin sensitisation in predisposed individuals. Care must be taken, when removing gloves and other protective equipment, to avoid all possible skin contact. ▸ Contaminated leather items, such as shoes, belts and watch-bands should be removed and destroyed. The selection of suitable gloves does not only depend on the material, but also on further marks of quality which vary from manufacturer to manufacturer. Where the chemical is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application. The exact break through time for substances has to be obtained from the manufacturer of the protective gloves and has to be observed when making a final choice. When handling liquid-grade epoxy resins wear chemically protective gloves , boots and aprons. The performance, based on breakthrough times ,of: · Ethyl Vinyl Alcohol (EVAL laminate) is generally excellent · Butyl Rubber ranges from excellent to good · Nitrile Butyl Rubber (NBR) from excellent to fair. · Neoprene from excellent to fair · Polyvinyl (PVC) from excellent to poor As defined in ASTM F-739-96 · Excellent breakthrough time > 480 min · Good breakthrough time > 20 min · Fair breakthrough time < 20 min · Poor glove material degradation Gloves should be tested against each resin system prior to making a selection of the most suitable type. ▸ Neoprene gloves
Body protection	See Other protection below
Other protection	▸ Overalls. ▸ P.V.C apron. ▸ Barrier cream.

Respiratory protection

Type A-P Filter of sufficient capacity. (AS/NZS 1716 & 1715, EN 143:2000 & 149:2001, ANSI Z88 or national equivalent)

- Cartridge respirators should never be used for emergency ingress or in areas of unknown vapour concentrations or oxygen content.
- The wearer must be warned to leave the contaminated area immediately on detecting any odours through the respirator. The odour may indicate that the mask is not functioning properly, that the vapour concentration is too high, or that the mask is not properly fitted. Because of these limitations, only restricted use of cartridge respirators is considered appropriate.
- Cartridge performance is affected by humidity. Cartridges should be changed after 2 hr of continuous use unless it is determined that the humidity is less than 75%, in which case, cartridges can be used for 4 hr. Used cartridges should be discarded daily, regardless of the length of time used

SECTION 9 Physical and chemical properties

Information on basic physical and chemical properties

Appearance	Phenolic resins are also widely known as phenol–formaldehyde resins, PF resins and phenoplasts. The trade name Bakelite has in the past been widely and erroneously used as a common noun and indeed is noted as such in many English dictionaries. Reaction of phenol with less than equimolar proportions of formaldehyde under acidic conditions gives novolac resins containing aromatic phenol units linked predominantly by methylene bridges. Novolac resins are thermally stable and can be cured by cross-linking with formaldehyde donors such as hexamethylenetetramine. However, resoles are the most widely used phenolic resins for composites: they are manufactured by reacting phenol with a greater than equimolar amount of formaldehyde under alkaline conditions and are essentially hydroxymethyl functional phenols or polynuclear. Reaction of phenols with formaldehyde and subsequent glycidylation with epichlorohydrin produces epoxidised novolacs, such as epoxy phenol novolacs (EPN) and epoxy cresol novolacs (ECN). These are highly viscous to solid resins with typical mean epoxide functionality of around 2 to 6. The high epoxide functionality of these resins forms a highly crosslinked polymer network displaying high temperature and chemical resistance, but low flexibility. Epoxy Novolac Resins are specifically designed to provide increased levels of thermal stability and chemical resistance. Reactive diluents are generally colourless to yellow/ amber, low viscosity liquids with mild ether-like odour; solubility in water varies across the family. Substitution on the phenolic rings may generate solids. Reactive diluents may contain trace residuals of epichlorohydrin a known skin irritant. Family of products which vary in their physical properties as a result of variations in production. Data presented here is for typical family member.

SECTION 10 Stability and reactivity

Reactivity	See section 7
Chemical stability	▸ Unstable in the presence of incompatible materials. ▸ Product is considered stable. ▸ Hazardous polymerisation will not occur.
Possibility of hazardous reactions	See section 7
Conditions to avoid	See section 7
Incompatible materials	See section 7
Hazardous decomposition products	See section 5

SECTION 11 Toxicological information

Information on toxicological effects

Inhaled	The material is not thought to produce either adverse health effects or irritation of the respiratory tract following inhalation (as classified by EC Directives using animal models). Nevertheless, adverse systemic effects have been produced following exposure of animals by at least one other route and good hygiene practice requires that exposure be kept to a minimum and that suitable control measures be used in an occupational setting. In animal testing, exposure to aerosols of reactive diluents (especially o-cresol glycidyl ether, CAS RN:2210-79-9) has been reported to affect the adrenal gland, central nervous system, kidney, liver, ovaries, spleen, testes, thymus and respiratory tract.
Ingestion	Accidental ingestion of the material may be damaging to the health of the individual. Reactive diluents exhibit a range of ingestion hazards. Small amounts swallowed incidental to normal handling operations are not likely to cause injury. However, swallowing larger amounts may cause injury. At sufficiently high doses the material may be hepatotoxic (i.e. poisonous to the liver). At sufficiently high doses the material may be nephrotoxic (i.e. poisonous to the kidney). High molecular weight material; on single acute exposure would be expected to pass through gastrointestinal tract with little change / absorption. Occasionally accumulation of the solid material within the alimentary tract may result in formation of a bezoar (concretion), producing discomfort.
Skin Contact	The material may accentuate any pre-existing dermatitis condition Skin contact with the material may damage the health of the individual; systemic effects may result following absorption. Skin contact with reactive diluents may cause slight to moderate irritation with local redness. Repeated or prolonged skin contact may cause burns. Open cuts, abraded or irritated skin should not be exposed to this material Entry into the blood-stream, through, for example, cuts, abrasions or lesions, may produce systemic injury with harmful effects. Examine the skin prior to the use of the material and ensure that any external damage is suitably protected. The material may cause moderate inflammation of the skin either following direct contact or after a delay of some time. Repeated exposure can cause contact dermatitis which is characterised by redness, swelling and blistering.
Eye	Eye contact with reactive diluents may cause slight to severe irritation with the possibility of chemical burns or moderate to severe damage to the cornea. This material may produce eye irritation in some persons and produce eye damage 24 hours or more after instillation. Moderate inflammation may be expected with redness; conjunctivitis may occur with prolonged exposure.
Chronic	Repeated or long-term occupational exposure is likely to produce cumulative health effects involving organs or biochemical systems. Strong evidence exists that this substance may cause irreversible mutations (though not lethal) even following a single exposure. Skin contact with the material is more likely to cause a sensitisation reaction in some persons compared to the general population. Ample evidence exists that this material directly causes reduced fertility This product contains a polymer with reactive functional groups (aldehydes and phenolics) regarded as being of moderate concern. Aldehydes are reactive, soluble and are highly irritating. Glycidyl ethers can cause genetic damage and cancer. For some reactive diluents, prolonged or repeated skin contact may result in absorption of potentially harmful amounts or allergic skin reactions. Exposure to some reactive diluents (notably, neopentylglycol diglycidyl ether, CAS RN: 17557-23-2) has caused cancer in some animal testing. There has been some concern that this material can cause cancer or mutations but there is not enough data to make an assessment. Bisphenol F, bisphenol A, fluorine-containing bisphenol A (bisphenol AF) and other diphenylalkanes were found to have oestrogen-like effects. Bisphenol F is present in the environment and as a contaminant of food, so humans may therefore be exposed to bisphenol. Testing shows bisphenol F has genetic toxicity as well as the ability to disrupt hormonal balance. Bisphenol A may have effects similar to female sex hormones and when administered to pregnant women, may damage the foetus. It may also damage male reproductive organs and sperm.

Retro-Coat Clear Part A	The various members of the bisphenol family produce hormone like effects, seemingly as a result of binding to estrogen receptor-related receptors (ERRs; not to be confused with estrogen receptors) A suspected estrogen-related receptors (ERR) binding agent: Estrogen-related receptors (ERR, oestrogen-related receptors) are so named because of sequence homology with estrogen receptors but do not appear to bind estrogens or other tested steroid hormones. The ERR family have been demonstrated to control energy homeostasis, oxidative metabolism and mitochondrial biogenesis ,while effecting mammalian physiology in the heart, brown adipose tissue, white adipose tissue, placenta, macrophages, and demonstrated additional roles in diabetes and cancer. ERRs bind enhancers throughout the genome where they exert effects on gene regulation Although their overall functions remain uncertain, they also share DNA-binding sites, co-regulators, and target genes with the conventional estrogen receptors ERalpha and ERbeta and may function to modulate estrogen signaling pathways. · ERR-alpha has wide tissue distribution but it is most highly expressed in tissues that preferentially use fatty acids as energy sources such as kidney, heart, brown adipose tissue, cerebellum, intestine, and skeletal muscle. ERRalpha has been detected in normal adrenal cortex tissues, in which its expression is possibly related to adrenal development, with a possible role in fetal adrenal function, in dehydroepiandrosterone (DHEAS) production in adrenarche, and also in steroid production of post-adrenarche/adult life. DHEA and other adrenal androgens such as androstenedione, although relatively weak androgens, are responsible for the androgenic effects of adrenarche, such as early pubic and axillary hair growth, adult-type body odor, increased oiliness of hair and skin, and mild acne.
PHENOL/ FORMALDEHYDE GLYCIDYL ETHER COPOLYMER	The material may produce moderate eye irritation leading to inflammation. Repeated or prolonged exposure to irritants may produce conjunctivitis. The material may cause skin irritation after prolonged or repeated exposure and may produce on contact skin redness, swelling, the production of vesicles, scaling and thickening of the skin.
O-CRESYL GLYCIDYL ETHER	o-CGE is a direct-acting mutagen in in-vitro test systems. Studies in vivo, including micronucleus tests and assays in transgenic animals, showed no mutagenic activity. Causes sensitisation * * Huntsman Araldite DY-K/ CH SDS For 1,2-butylene oxide (ethyloxirane): In animal testing, ethyloxirane increased the incidence of tumours of the airways in animals exposed via inhalation. However, tumours were not observed in mice chronically exposed via skin. Two structurally related substances, oxirane (ethylene oxide) and methyloxirane (propylene oxide), which are also direct-acting alkylating agents, have been classified as causing cancer.
Retro-Coat Clear Part A & O-CRESYL GLYCIDYL ETHER	Laboratory (in vitro) and animal studies show, exposure to the material may result in a possible risk of irreversible effects, with the possibility of producing mutation.
Retro-Coat Clear Part A & PHENOL/ FORMALDEHYDE GLYCIDYL ETHER COPOLYMER & BISPHENOL F DIGLYCIDYL ETHER COPOLYMER & O-CRESYL GLYCIDYL ETHER	The following information refers to contact allergens as a group and may not be specific to this product. Contact allergies quickly manifest themselves as contact eczema, more rarely as urticaria or Quincke's oedema. The pathogenesis of contact eczema involves a cell-mediated (T lymphocytes) immune reaction of the delayed type.
Retro-Coat Clear Part A & PHENOL/ FORMALDEHYDE GLYCIDYL ETHER COPOLYMER & BISPHENOL F DIGLYCIDYL ETHER COPOLYMER	The chemical structure of hydroxylated diphenylalkanes or bisphenols consists of two phenolic rings joined together through a bridging carbon. This class of endocrine disruptors that mimic oestrogens is widely used in industry, particularly in plastics. Bisphenol A (BPA) and some related compounds exhibit oestrogenic activity in human breast cancer cell line MCF-7, but there were remarkable differences in activity. Several derivatives of BPA exhibited significant thyroid hormonal activity towards rat pituitary cell line GH3, which releases growth hormone in a thyroid hormone-dependent manner.
Retro-Coat Clear Part A & BISPHENOL F DIGLYCIDYL ETHER COPOLYMER & O-CRESYL GLYCIDYL ETHER	Oxiranes (including glycidyl ethers and alkyl oxides, and epoxides) share many common characteristics with respect to animal toxicology. One such oxirane is ethyloxirane; data presented here may be taken as representative.

Legend: *Extracted from 1. IUCLID Toxicity Data 2. Europe ECHA Registered Substances - Ecotoxicological Information - Aquatic Toxicity 4. US EPA, Ecotox database - Aquatic Toxicity Data 5. ECETOC Aquatic Hazard Assessment Data 6. NITE (Japan) - Bioconcentration Data 7. METI (Japan) - Bioconcentration Data 8. Vendor Data*

Toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.
Do NOT allow product to come in contact with surface waters or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment wash-waters.
Wastes resulting from use of the product must be disposed of on site or at approved waste sites.
For high molecular weight synthetic polymers: (according to the Sustainable Futures (SF) program (U.S. EPA 2005b; U.S. EPA 2012c) polymer assessment guidance.)
High MW polymers are expected:
· to have low vapour pressure and are not expected to undergo volatilization .
· to adsorb strongly to soil and sediment
· to be non-biodegradable (not anticipated to be assimilated by microorganisms.- therefore, biodegradation is not expected to be an important removal process. However many exceptions exist
High MW polymers are not expected to undergo removal by other degradative processes under environmental conditions
For bisphenol A and related bisphenols:
Environmental fate:
Biodegradability (28 d) 89% - Easily biodegradable
Bioconcentration factor (BCF) 7.8 mg/l
Bisphenol A, its derivatives and analogues, can be released from polymers, resins and certain substances by metabolic products
Substance does not meet the criteria for PBT or vPvB according to Regulation (EC) No 1907/2006, Annex XIII
As an environmental contaminant, bisphenol A interferes with nitrogen fixation at the roots of leguminous plants associated with the bacterial symbiont Sinorhizobium meliloti. Despite a half-life in the soil of only 1-10 days, its ubiquity makes it an important pollutant. According to Environment Canada, 'initial assessment shows that at low levels, bisphenol A can harm fish and organisms over time.
Reactive diluents generally have a low to moderate potential for bioconcentration (tendency to accumulate in the food chain) and a high to very high potential for mobility in soil. Small amounts that escape to the atmosphere will photodegrade.
They would not be expected to persist in the environment.
Environmental toxicity is a function of the n-octanol/water partition coefficient (log Pow, log Kow). Compounds with log Pow >5 act as neutral organics, but at a lower log Pow, the toxicity of epoxide-containing polymers is greater than that predicted for simple narcotics.
Significant environmental findings are limited. Oxiranes (including glycidyl ethers and alkyl oxides, and epoxides) exhibit common characteristics with respect to environmental fate and ecotoxicology. One such oxirane is ethyloxirane and data presented here may be taken as representative.
For 1,2-Butylene oxide (Ethyloxirane):
log Kow values of 0.68 and 0.86. BAF and BCF : 1 to 17 L./kg.
Aquatic Fate - Ethyloxirane is highly soluble in water and has a very low soil-adsorption coefficient, which suggests that, if released to water, adsorption of ethyloxirane to sediment and suspended solids is not expected.
For Phenols:
Ecotoxicity - Phenols with log Pow >7.4 are expected to exhibit low toxicity to aquatic organisms however; the toxicity of phenols with a lower log Pow is variable. Dinitrophenols are more toxic than predicted from QSAR estimates. Hazard information for these groups is not generally available.
DO NOT discharge into sewer or waterways.

Persistence and degradability

Ingredient	Persistence: Water/Soil	Persistence: Air
o-cresyl glycidyl ether	HIGH	HIGH

Bioaccumulative potential

Ingredient	Bioaccumulation
o-cresyl glycidyl ether	LOW (LogKOW = 2.1609)

Mobility in soil

Ingredient	Mobility
o-cresyl glycidyl ether	LOW (KOC = 67.93)

SECTION 13 Disposal considerations

Waste treatment methods

Product / Packaging disposal	▸ Containers may still present a chemical hazard/ danger when empty. ▸ Return to supplier for reuse/ recycling if possible. Otherwise: ▸ If container can not be cleaned sufficiently well to ensure that residuals do not remain or if the container cannot be used to store the same product, then puncture containers, to prevent re-use, and bury at an authorised landfill. Legislation addressing waste disposal requirements may differ by country, state and/ or territory. Each user must refer to laws operating in their area. In some areas, certain wastes must be tracked. ▸ **DO NOT** allow wash water from cleaning or process equipment to enter drains. ▸ It may be necessary to collect all wash water for treatment before disposal. ▸ In all cases disposal to sewer may be subject to local laws and regulations and these should be considered first. ▸ Recycle wherever possible or consult manufacturer for recycling options. ▸ Consult State Land Waste Authority for disposal. ▸ Bury or incinerate residue at an approved site.

SECTION 14 Transport information

Labels Required

	
Marine Pollutant	

Shipping container and transport vehicle placarding and labeling may vary from the below information. Products that are regulated for transport will be packaged and marked as Dangerous Goods in Excepted Quantities according to US DOT, IATA and IMDG regulations. In case of reshipment, it is the responsibility of the shipper to determine the appropriate labels and markings in accordance with applicable transport regulations.

Land transport (DOT)

UN number or ID number	3082
UN proper shipping name	Environmentally hazardous substance, liquid, n.o.s.(contains Liquid Epoxy Resin)
Transport hazard class(es)	Class: 9 Subsidiary risk: Not Applicable
Packing group	III
Environmental hazard	Environmentally hazardous
Special precautions for user	Hazard Label: 9 Special provisions: 8, 146, 173, 335, 441, IB3, T4, TP1, TP29

For Individual Packages of Environmentally Hazardous Substances meeting the descriptions of UN 3077 or UN 3082 that contain LESS THAN the reportable quantity (5 kg or 5 L) - Not Regulated
For Individual Packages of Environmentally Hazardous Substances meeting the descriptions of UN 3077 or UN 3082 that contain MORE THAN the reportable quantity (5 kg or 5 L) - Regulated and classified as below:

Air transport (ICAO-IATA / DGR)

UN number	3082
UN proper shipping name	Environmentally hazardous substance, liquid, n.o.s.(contains Liquid Epoxy Resin)
Transport hazard class(es)	ICAO/IATA Class: 9 ICAO / IATA Subrisk: Not Applicable ERG Code: 9L
Packing group	III
Environmental hazard	Environmentally hazardous
Special precautions for user	Special provisions: A97 A158 A197 A215 Cargo Only Packing Instructions: 964 Cargo Only Maximum Qty / Pack: 450 L Passenger and Cargo Packing Instructions: 964 Passenger and Cargo Maximum Qty / Pack: 450 L Passenger and Cargo Limited Quantity Packing Instructions: Y964 Passenger and Cargo Limited Maximum Qty / Pack: 30 kg G

Page 1 continued...

Hazard statement(s)

H334	May cause allergy or asthma symptoms or breathing difficulties if inhaled.
H336	May cause drowsiness or dizziness.
H411	Toxic to aquatic life with long lasting effects.
H312	Harmful in contact with skin.
H373	May cause damage to organs through prolonged or repeated exposure.
H290	May be corrosive to metals.
H332	Harmful if inhaled.
H302	Harmful if swallowed.
H317	May cause an allergic skin reaction.
H361	Suspected of damaging fertility or the unborn child.
H341	Suspected of causing genetic defects.
H314	Causes severe skin burns and eye damage.
H351	Suspected of causing cancer.

Hazard(s) not otherwise classified

Not Applicable

Precautionary statement(s) General

P101	If medical advice is needed, have product container or label at hand.
P102	Keep out of reach of children.
P103	Read label before use.

Precautionary statement(s) Prevention

P201	Obtain special instructions before use.
P260	Do not breathe mist/vapours/spray.
P271	Use only outdoors or in a well-ventilated area.
P280	Wear protective gloves, protective clothing, eye protection and face protection.
P284	[In case of inadequate ventilation] wear respiratory protection.
P234	Keep only in original container.
P264	Wash all exposed external body areas thoroughly after handling.
P270	Do not eat, drink or smoke when using this product.
P273	Avoid release to the environment.
P202	Do not handle until all safety precautions have been read and understood.
P272	Contaminated work clothing must not be allowed out of the workplace.

Precautionary statement(s) Response

P301+P330+P331	IF SWALLOWED: Rinse mouth. Do NOT induce vomiting.
P303+P361+P353	IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower.
P305+P351+P338	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
P308+P313	IF exposed or concerned: Get medical advice/ attention.
P342+P311	If experiencing respiratory symptoms: Call a POISON CENTER/doctor/physician/first aider.
P363	Wash contaminated clothing before reuse.
P333+P313	If skin irritation or rash occurs: Get medical advice/attention.
P391	Collect spillage.
P304+P340	IF INHALED: Remove person to fresh air and keep comfortable for breathing.

Precautionary statement(s) Storage

P405	Store locked up.
P403+P233	Store in a well-ventilated place. Keep container tightly closed.
P406	Store in corrosive resistant/ container with a resistant inner liner.

Precautionary statement(s) Disposal

P501	Dispose of contents/container to authorised hazardous or special waste collection point in accordance with any local regulation.

SECTION 3 Composition / information on ingredients

Substances

See section below for composition of Mixtures

Mixtures

CAS No	%[weight]	Name

Continued...

CAS No	%[weight]	Name
100-51-6	30-60	benzyl alcohol
69-72-7	0.5-1.5	salicylic acid
135108-88-2	10-30	formaldehyde/ benzenamine, hydrogenated
1761-71-3	5-10	4,4'-methylenebis(cyclohexylamine)
2579-20-6	5-10	1,3-cyclohexanebis(methylamine)
128-37-0	0.5-1.5	2,6-di-tert-butyl-4-methylphenol
1477-55-0	5-10	m-xylenediamine
2855-13-2	10-30	isophorone diamine
98-54-4	1-5	p-tert-butylphenol

The specific chemical identity and/or exact percentage (concentration) of composition has been withheld as a trade secret.

SECTION 4 First-aid measures

Description of first aid measures

Eye Contact	If this product comes in contact with the eyes: ▸ Immediately hold eyelids apart and flush the eye continuously with running water. ▸ Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally lifting the upper and lower lids. ▸ Continue flushing until advised to stop by the Poisons Information Centre or a doctor, or for at least 15 minutes. ▸ Transport to hospital or doctor without delay. ▸ Removal of contact lenses after an eye injury should only be undertaken by skilled personnel. For amines: ▸ If liquid amines come in contact with the eyes, irrigate immediately and continuously with low pressure flowing water, preferably from an eye wash fountain, for 15 to 30 minutes. ▸ For more effective flushing of the eyes, use the fingers to spread apart and hold open the eyelids. The eyes should then be “rolled” or moved in all directions. ▸ Seek immediate medical attention, preferably from an ophthalmologist.
Skin Contact	If skin or hair contact occurs: ▸ Immediately flush body and clothes with large amounts of water, using safety shower if available. ▸ Quickly remove all contaminated clothing, including footwear. ▸ Wash skin and hair with running water. Continue flushing with water until advised to stop by the Poisons Information Centre. ▸ Transport to hospital, or doctor. For amines: ▸ In case of major exposure to liquid amine, promptly remove any contaminated clothing, including rings, watches, and shoe, preferably under a safety shower. ▸ Wash skin for 15 to 30 minutes with plenty of water and soap. Call a physician immediately. ▸ Remove and dry-clean or launder clothing soaked or soiled with this material before reuse. Dry cleaning of contaminated clothing may be more effective than normal laundering. ▸ Inform individuals responsible for cleaning of potential hazards associated with handling contaminated clothing. ▸ Discard contaminated leather articles such as shoes, belts, and watchbands. ▸ Note to Physician: Treat any skin burns as thermal burns. After decontamination, consider the use of cold packs and topical antibiotics.
Inhalation	▸ If fumes or combustion products are inhaled remove from contaminated area. ▸ Lay patient down. Keep warm and rested. ▸ Prostheses such as false teeth, which may block airway, should be removed, where possible, prior to initiating first aid procedures. ▸ Apply artificial respiration if not breathing, preferably with a demand valve resuscitator, bag-valve mask device, or pocket mask as trained. Perform CPR if necessary. ▸ Transport to hospital, or doctor, without delay. ▸ Inhalation of vapours or aerosols (mists, fumes) may cause lung oedema. ▸ Corrosive substances may cause lung damage (e.g. lung oedema, fluid in the lungs). ▸ As this reaction may be delayed up to 24 hours after exposure, affected individuals need complete rest (preferably in semi-recumbent posture) and must be kept under medical observation even if no symptoms are (yet) manifested. ▸ Before any such manifestation, the administration of a spray containing a dexamethasone derivative or beclomethasone derivative may be considered. **This must definitely be left to a doctor or person authorised by him/her.** (ICSC13719) For amines: ▸ All employees working in areas where contact with amine catalysts is possible should be thoroughly trained in the administration of appropriate first aid procedures. ▸ Experience has demonstrated that prompt administration of such aid can minimize the effects of accidental exposure. ▸ Promptly move the affected person away from the contaminated area to an area of fresh air. ▸ Keep the affected person calm and warm, but not hot. ▸ If breathing is difficult, oxygen may be administered by a qualified person. ▸ If breathing stops, give artificial respiration. Call a physician at once.
Ingestion	▸ For advice, contact a Poisons Information Centre or a doctor at once. ▸ Urgent hospital treatment is likely to be needed. ▸ If swallowed do **NOT** induce vomiting. ▸ If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain open airway and prevent aspiration. ▸ Observe the patient carefully. ▸ Never give liquid to a person showing signs of being sleepy or with reduced awareness; i.e. becoming unconscious. ▸ Give water to rinse out mouth, then provide liquid slowly and as much as casualty can comfortably drink. ▸ Transport to hospital or doctor without delay. For amines: ▸ If liquid amine are ingested, have the affected person drink several glasses of water or milk. ▸ Do not induce vomiting. ▸ Immediately transport to a medical facility and inform medical personnel about the nature of the exposure. The decision of whether to induce

Continued...

	vomiting should be made by an attending physician.

Most important symptoms and effects, both acute and delayed

See Section 11

Indication of any immediate medical attention and special treatment needed

for salicylate intoxication:
· Pending gastric lavage, use emetics such as syrup of Ipecac or delay gastric emptying and absorption by swallowing a slurry of activated charcoal. Do not give ipecac after charcoal.
· Gastric lavage with water or perhaps sodium bicarbonate solution (3%-5%). Mild alkali delays salicylate absorption from the stomach and perhaps slightly from the duodenum.
· Saline catharsis with sodium or magnesium sulfate (15-30 gm in water).
· Take an immediate blood sample for an appraisal of the patient's acid-base status. A pH determination on an anaerobic sample of arterial blood is best. An analysis of the plasma salicylate concentration should be made at the same time. Laboratory controls are almost essential for the proper management of severe salicylism.
· In the presence of an established acidosis, alkali therapy is essential, but at least in an adult, alkali should be withheld until its need is demonstrated by chemical analysis. The intensity of treatment depends on the intensity of acidosis. In the presence of vomiting, intravenous sodium bicarbonate is the most satisfactory of all alkali therapy.
· Correct dehydration and hypoglycaemia (if present) by the intravenous administration of glucose in water or in isotonic saline. The administration of glucose may also serve to remedy ketosis which is often seen in poisoned children.
· Even in patients without hypoglycaemia, infusions of glucose adequate to produce distinct hyperglycaemia are recommended to prevent glucose depletion in the brain. This recommendation is based on impressive experimental data in animals.
· Renal function should be supported by correcting dehydration and incipient shock. Overhydration is not justified. An alkaline urine should be maintained by the administration of alkali if necessary with care to prevent a severe systemic alkalosis. As long as urine remains alkaline (pH above 7.5), administration of an osmotic diuretic such as mannitol or perhaps THAM is useful, but one must be careful to avoid hypokalaemia. Supplements of potassium chloride should be included in parenteral fluids.
· Small doses of barbiturates, diazepam, paraldehyde, or perhaps other sedatives (but probably not morphine) may be required to suppress extreme restlessness and convulsions.
· For hyperpyrexia, use sponge baths.
The presence of petechiae or other signs of haemorrhagic tendency calls for a large Vitamin K dose and perhaps ascorbic acid. Minor transfusions may be necessary since bleeding in salicylism is not always due to a prothrombin effect.
· Haemodialysis and haemoperfusion have proved useful in salicylate poisoning, as have peritoneal dialysis and exchange transfusions, but alkaline diuretic therapy is probably sufficient except in fulminating cases.
[*GOSSELIN, et.al.: Clinical Toxicology of Commercial Products*]
The mechanism of the toxic effect involves metabolic acidosis, respiratory alkalosis, hypoglycaemia, and potassium depletion. Salicylate poisoning is characterised by extreme acid-base disturbances, electrolyte disturbances and decreased levels of consciousness. There are differences between acute and chronic toxicity and a varying clinical picture which is dependent on the age of the patient and their kidney function. The major feature of poisoning is metabolic acidosis due to "uncoupling of oxidative phosphorylation" which produces an increased metabolic rate, increased oxygen consumption, increased formation of carbon dioxide, increased heat production and increased utilisation of glucose. Direct stimulation of the respiratory centre leads to hyperventilation and respiratory alkalosis. This leads to compensatory increased renal excretion of bicarbonate which contributes to the metabolic acidosis which may coexist or develop subsequently. Hypoglycaemia may occur as a result of increased glucose demand, increased rates of tissue glycolysis, and impaired rate of glucose synthesis. **NOTE:** Tissue glucose levels may be lower than plasma levels. Hyperglycaemia may occur due to increased glycogenolysis. Potassium depletion occurs as a result of increased renal excretion as well as intracellular movement of potassium.
Salicylates competitively inhibit vitamin K dependent synthesis of factors II, VII, IX, X and in addition, may produce a mild dose dependent hepatitis. Salicylates are bound to albumin. The extent of protein binding is concentration dependent (and falls with higher blood levels). This, and the effects of acidosis, decreasing ionisation, means that the volume of distribution increases markedly in overdose as does CNS penetration. The extent of protein binding (50-80%) and the rate of metabolism are concentration dependent. Hepatic clearance has zero order kinetics and thus the therapeutic half-life of 2-4.5 hours but the half-life in overdose is 18-36 hours. Renal excretion is the most important route in overdose. Thus when the salicylate concentrations are in the toxic range there is increased tissue distribution and impaired clearance of the drug.
HyperTox 3.0 http://www.ozemail.com.au/-ouad/SALI0001.HTA
Clinical experience of benzyl alcohol poisoning is generally confined to premature neonates in receipt of preserved intravenous salines.
- Metabolic acidosis, bradycardia, skin breakdown, hypotonia, hepatorenal failure, hypotension and cardiovascular collapse are characteristic.
- High urine benzoate and hippuric acid as well as elevated serum benzoic acid levels are found.
- The so-called "gasping syndrome describes the progressive neurological deterioration of poisoned neonates.
- Management is essentially supportive.

for non-steroidal anti-inflammatories (NSAIDs)
- Symptoms following acute NSAIDs overdoses are usually limited to lethargy, drowsiness, nausea, vomiting, and epigastric pain, which are generally reversible with supportive care. Gastrointestinal bleeding can occur. Hypertension, acute renal failure, respiratory depression, and coma may occur, but are rare. Anaphylactoid reactions have been reported with therapeutic ingestion of NSAIDs, and may occur following an overdose.
- Patients should be managed by symptomatic and supportive care following a NSAIDs overdose.
- There are no specific antidotes.
- Emesis and/or activated charcoal (60 to 100 grams in adults, 1 to 2 g/kg in children), and/or osmotic cathartic may be indicated in patients seen within 4 hours of ingestion with symptoms or following a large overdose (5 to 10 times the usual dose).
- Forced diuresis, alkalinisation of urine, hemodialysis, or haemoperfusion may not be useful due to high protein binding.
- For gastrointestinal haemorrhage, monitor stool guaiac and administer antacids or sucralfate.
- For mild/moderate allergic reactions, administer antihistamines with or without inhaled beta agonists,corticosteroids, or epinephrine.
- For severe allergic reactions, administer oxygen, antihistamines,epinephrine, or corticosteroids. Nephritis or nephrotic syndrome, thrombocytopenia, or haemolytic anemia may respond to glucocorticoid administration.
- For severe acidosis, administer sodium bicarbonate.
- Administer as required: plasma volume expanders for severe hypotension; diazepam or other benzodiazepine for convulsions; vitamin K1 for hypoprothrombinaemia; and/or dopamine plus dobutamine intravenously to prevent or reverse early indications of renal failure.

Serious gastrointestinal toxicity, such as bleeding, ulceration, and perforation, can occur at any time, with or without warning symptoms, in patients treated chronically with NSAID therapy. Although minor upper gastrointestinal problems, such as dyspepsia, are common, usually developing early in therapy, physicians should remain alert for ulceration and bleeding in patients treated chronically with NSAIDs even in the absence of previous GI tract symptoms. In patients observed in clinical trials of several months to two years duration, symptomatic upper GI ulcers, gross bleeding or perforation appear to occur in approximately 1% of patients treated for 3 to 6 months, and in about 2% to 4% of patients treated for one year. Physicians should inform patients about the signs and/or symptoms of serious GI toxicity and what steps to take if they occur.
Studies to date have not identified any subset of patients not at risk of developing peptic ulceration and bleeding. Except for a prior history of serious GI events and other risk factors known to be associated with peptic ulcer disease, such as alcoholism, smoking, etc., no risk factors (e.g., age, sex) have been associated with increased risk. Elderly or debilitated patients seem to tolerate ulceration or bleeding less well than other individuals, and most spontaneous reports of fatal GI events are in this population. Studies to date are inconclusive concerning the relative risk of various NSAIDs in causing such reactions. High doses of any NSAID probably carry a greater risk of these reactions, although controlled clinical trials showing this do not exist in most cases. In considering the use of relatively large doses (within the recommended dosage range), sufficient benefit should be anticipated to offset the potential increased risk of GI toxicity.
For acute or short-term repeated exposures to highly alkaline materials:
- Respiratory stress is uncommon but present occasionally because of soft tissue edema.
- Unless endotracheal intubation can be accomplished under direct vision, cricothyroidotomy or tracheotomy may be necessary.
- Oxygen is given as indicated.
- The presence of shock suggests perforation and mandates an intravenous line and fluid administration.
- Damage due to alkaline corrosives occurs by liquefaction necrosis whereby the saponification of fats and solubilisation of proteins allow deep penetration into the tissue.

Alkalis continue to cause damage after exposure.
INGESTION:
- Milk and water are the preferred diluents

No more than 2 glasses of water should be given to an adult.
- Neutralising agents should never be given since exothermic heat reaction may compound injury.

* Catharsis and emesis are absolutely contra-indicated.
* Activated charcoal does not absorb alkali.

Continued...

* Gastric lavage should not be used.
Supportive care involves the following:
- Withhold oral feedings initially.
- If endoscopy confirms transmucosal injury start steroids only within the first 48 hours.
- Carefully evaluate the amount of tissue necrosis before assessing the need for surgical intervention.
- Patients should be instructed to seek medical attention whenever they develop difficulty in swallowing (dysphagia).

SKIN AND EYE:
- Injury should be irrigated for 20-30 minutes.

Eye injuries require saline. [Ellenhorn & Barceloux: Medical Toxicology]
For amines:
- Certain amines may cause injury to the respiratory tract and lungs if aspirated. Also, such products may cause tissue destruction leading to stricture. If lavage is performed, endotracheal and/or esophagoscopic control is suggested.
- No specific antidote is known.
- Care should be supportive and treatment based on the judgment of the physician in response to the reaction of the patient.

Laboratory animal studies have shown that a few amines are suspected of causing depletion of certain white blood cells and their precursors in lymphoid tissue. These effects may be due to an immunosuppressive mechanism.
Some persons with hyperreactive airways (e.g., asthmatic persons) may experience wheezing attacks (bronchospasm) when exposed to airway irritants.
Lung injury may result following a single massive overexposure to high vapour concentrations or multiple exposures to lower concentrations of any pulmonary irritant material.
Health effects of amines, such as skin irritation and transient corneal edema (“blue haze,” “halo effect,” “glaucopsia”), are best prevented by means of formal worker education, industrial hygiene monitoring, and exposure control methods. Persons who are highly sensitive to the triggering effect of non-specific irritants should not be assigned to jobs in which such agents are used, handled, or manufactured.
Medical surveillance programs should consist of a pre-placement evaluation to determine if workers or applicants have any impairments (e.g., hyperreactive airways or bronchial asthma) that would limit their fitness for work in jobs with potential for exposure to amines. A clinical baseline can be established at the time of this evaluation.
Periodic medical evaluations can have significant value in the early detection of disease and in providing an opportunity for health counseling.
Medical personnel conducting medical surveillance of individuals potentially exposed to polyurethane amine catalysts should consider the following:
- Health history, with emphasis on the respiratory system and history of infections
- Physical examination, with emphasis on the respiratory system and the lymphoreticular organs (lymph nodes, spleen, etc.)
- Lung function tests, pre- and post-bronchodilator if indicated
- Total and differential white blood cell count
- Serum protein electrophoresis

Persons who are concurrently exposed to isocyanates also should be kept under medical surveillance.
Pre-existing medical conditions generally aggravated by exposure include skin disorders and allergies, chronic respiratory disease (e.g. bronchitis, asthma, emphysema), liver disorders, kidney disease, and eye disease.
Broadly speaking, exposure to amines, as characterised by amine catalysts, may cause effects similar to those caused by exposure to ammonia. As such, amines should be considered potentially injurious to any tissue that is directly contacted.
Inhalation of aerosol mists or vapors, especially of heated product, can result in chemical pneumonitis, pulmonary edema, laryngeal edema, and delayed scarring of the airway or other affected organs. There is no specific treatment.
Clinical management is based upon supportive treatment, similar to that for thermal burns.
Persons with major skin contact should be maintained under medical observation for at least 24 hours due to the possibility of delayed reactions.
Polyurethene Amine Catalysts: Guidelines for Safe Handling and Disposal Technical Bulletin June 2000
Alliance for Polyurethanes Industry

SECTION 5 Fire-fighting measures

Extinguishing media

- Foam.
- Dry chemical powder.

Special hazards arising from the substrate or mixture

Fire Incompatibility	‣ Avoid contamination with oxidising agents i.e. nitrates, oxidising acids, chlorine bleaches, pool chlorine etc. as ignition may result

Special protective equipment and precautions for fire-fighters

Fire Fighting	‣ Alert Fire Brigade and tell them location and nature of hazard. ‣ Wear full body protective clothing with breathing apparatus. For amines: ‣ For firefighting, cleaning up large spills, and other emergency operations, workers must wear a self-contained breathing apparatus with full face-piece, operated in a pressure-demand mode. ‣ Airline and air purifying respirators should not be worn for firefighting or other emergency or upset conditions.
Fire/Explosion Hazard	‣ Combustible. ‣ Slight fire hazard when exposed to heat or flame. Combustion products include: carbon dioxide (CO_2) aldehydes nitrogen oxides (NO_x) other pyrolysis products typical of burning organic material. May emit corrosive fumes. **WARNING**: Long standing in contact with air and light may result in the formation of potentially explosive peroxides.

SECTION 6 Accidental release measures

Personal precautions, protective equipment and emergency procedures

See section 8

Environmental precautions

See section 12

Methods and material for containment and cleaning up

Minor Spills	‣ Drains for storage or use areas should have retention basins for pH adjustments and dilution of spills before discharge or disposal of

Continued...

	material. ▸ Check regularly for spills and leaks. Slippery when spilt. ▸ Clean up all spills immediately. ▸ Avoid breathing vapours and contact with skin and eyes. for amines: ▸ If possible (i.e., without risk of contact or exposure), stop the leak. ▸ Contain the spilled material by diking, then neutralize.
Major Spills	Slippery when spilt. ▸ Clear area of personnel and move upwind. ▸ Alert Fire Brigade and tell them location and nature of hazard. For amines: ▸ First remove all ignition sources from the spill area. ▸ Have firefighting equipment nearby, and have firefighting personnel fully trained in the proper use of the equipment and in the procedures used in fighting a chemical fire.

Personal Protective Equipment advice is contained in Section 8 of the SDS.

SECTION 7 Handling and storage

Precautions for safe handling

Safe handling	▸ Avoid all personal contact, including inhalation. ▸ Wear protective clothing when risk of exposure occurs. ▸ **DO NOT** allow clothing wet with material to stay in contact with skin
Other information	▸ Store in original containers. ▸ Keep containers securely sealed. ▸ **DO NOT** store near acids, or oxidising agents ▸ No smoking, naked lights, heat or ignition sources.

Conditions for safe storage, including any incompatibilities

Suitable container	▸ Glass container is suitable for laboratory quantities ▸ Lined metal can, lined metal pail/ can. ▸ Plastic pail. For low viscosity materials ▸ Drums and jerricans must be of the non-removable head type. ▸ Where a can is to be used as an inner package, the can must have a screwed enclosure.
Storage incompatibility	Benzyl alcohol: ▸ may froth in contact with water ▸ slowly oxidises in air, oxygen forming benzaldehyde ▸ is incompatible with mineral acids, caustics, aliphatic amines, isocyanates ▸ reacts violently with strong oxidisers, and explosively with sulfuric acid at elevated temperatures ▸ corrodes aluminium at high temperatures ▸ is incompatible with aluminum, iron, steel ▸ attacks some nonfluorinated plastics; may attack, extract and dissolve polypropylene Benzyl alcohol contaminated with 1.4% hydrogen bromide and 1.2% of dissolved iron(II) polymerises exothermically above 100 deg. C. ▸ Reacts with mild steel, galvanised steel / zinc producing hydrogen gas which may form an explosive mixture with air. Amines are incompatible with: · isocyanates, halogenated organics, peroxides, phenols (acidic), epoxides, anhydrides, and acid halides. · strong reducing agents such as hydrides, due to the liberation of flammable gas. ▸ Avoid strong acids, acid chlorides, acid anhydrides and chloroformates. ▸ Avoid contact with copper, aluminium and their alloys. ▸ Avoid reaction with oxidising agents

SECTION 8 Exposure controls / personal protection

1,3-cyclohexanebis(methylamine)	Not Available	Not Available
2,6-di-tert-butyl-4-methylphenol	Not Available	Not Available
m-xylenediamine	Not Available	Not Available
isophorone diamine	Not Available	Not Available
p-tert-butylphenol	Not Available	Not Available

Occupational Exposure Banding

Ingredient	Occupational Exposure Band Rating	Occupational Exposure Band Limit
benzyl alcohol	E	≤ 0.1 ppm
salicylic acid	E	≤ 0.01 mg/m³
formaldehyde/ benzenamine, hydrogenated	E	≤ 0.1 ppm
4,4'-methylenebis(cyclohexylamine)	E	≤ 0.1 ppm
1,3-cyclohexanebis(methylamine)	D	> 0.1 to ≤ 1 ppm
isophorone diamine	D	> 0.1 to ≤ 1 ppm
Notes:	*Occupational exposure banding is a process of assigning chemicals into specific categories or bands based on a chemical's potency and the adverse health outcomes associated with exposure. The output of this process is an occupational exposure band (OEB), which corresponds to a range of exposure concentrations that are expected to protect worker health.*	

Exposure controls

Appropriate engineering controls	**Unless written procedures, specific to the workplace are available, the following is intended as a guide:** ▸ **For Laboratory-scale handling of Substances assessed to be toxic by inhalation. *Quantities of up to 25 grams*** may be handled in Class II biological safety cabinets *; ***Quantities of 25 grams to 1 kilogram*** may be handled in Class II biological safety cabinets* or equivalent containment systems; ***Quantities exceeding 1 kg*** may be handled either using specific containment, a hood or Class II biological safety cabinet*, ▸ HEPA terminated local exhaust ventilation should be considered at point of generation of dust, fumes or vapours.
Individual protection measures, such as personal protective equipment	
Eye and face protection	When handling very small quantities of the material eye protection may not be required. For laboratory, larger scale or bulk handling or where regular exposure in an occupational setting occurs: ▸ Chemical goggles. For amines: SPECIAL PRECAUTION: ▸ Because amines are alkaline materials that can cause rapid and severe tissue damage, wearing of contact lenses while working with amines is strongly discouraged. Wearing such lenses can prolong contact of the eye tissue with the amine, thereby causing more severe damage.
Skin protection	See Hand protection below
Hands/feet protection	▸ Elbow length PVC gloves ▸ When handling corrosive liquids, wear trousers or overalls outside of boots, to avoid spills entering boots. The selection of suitable gloves does not only depend on the material, but also on further marks of quality which vary from manufacturer to manufacturer. Where the chemical is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application. ▸ Rubber gloves (nitrile or low-protein, powder-free latex, latex/ nitrile). Employees allergic to latex gloves should use nitrile gloves in preference. For amines: ▸ Gloves must only be worn on clean hands. After using gloves, hands should be washed and dried thoroughly.
Body protection	See Other protection below

Continued...

Other protection	▸ Overalls. ▸ PVC Apron.

Respiratory protection

Type AK-P Filter of sufficient capacity. (AS/NZS 1716 & 1715, EN 143:2000 & 149:2001, ANSI Z88 or national equivalent)

- Cartridge respirators should never be used for emergency ingress or in areas of unknown vapour concentrations or oxygen content.
- The wearer must be warned to leave the contaminated area immediately on detecting any odours through the respirator. The odour may indicate that the mask is not functioning properly, that the vapour concentration is too high, or that the mask is not properly fitted. Because of these limitations, only restricted use of cartridge respirators is considered appropriate.
- Cartridge performance is affected by humidity. Cartridges should be changed after 2 hr of continuous use unless it is determined that the humidity is less than 75%, in which case, cartridges can be used for 4 hr. Used cartridges should be discarded daily, regardless of the length of time used

Where engineering controls are not feasible and work practices do not reduce airborne amine concentrations below recommended exposure limits, appropriate respiratory protection should be used. In such cases, air-purifying respirators equipped with cartridges designed to protect against amines are recommended.

SECTION 9 Physical and chemical properties

Information on basic physical and chemical properties

Appearance	Not Available

Physical state	Liquid	**Relative density (Water = 1)**	Not Available

SECTION 10 Stability and reactivity

Reactivity	See section 7
Chemical stability	▸ Unstable in the presence of incompatible materials. ▸ Product is considered stable.
Possibility of hazardous reactions	See section 7
Conditions to avoid	See section 7
Incompatible materials	See section 7
Hazardous decomposition products	See section 5

SECTION 11 Toxicological information

Information on toxicological effects

Inhaled	The material can cause respiratory irritation in some persons. The body's response to such irritation can cause further lung damage. Inhaling corrosive bases may irritate the respiratory tract. Symptoms include cough, choking, pain and damage to the mucous membrane. Inhalation of vapours may cause drowsiness and dizziness. This may be accompanied by sleepiness, reduced alertness, loss of reflexes, lack of co-ordination, and vertigo. Inhalation of amine vapours may cause irritation of the mucous membrane of the nose and throat, and lung irritation with respiratory distress and cough. Swelling and inflammation of the respiratory tract is seen in serious cases; with headache, nausea, faintness and anxiety.

Continued...

	Inhalation of epoxy resin amine hardeners (including polyamines and amine adducts) may produce bronchospasm and coughing episodes lasting several days after cessation of the exposure. Even faint traces of these vapours may trigger an intense reaction in individuals showing "amine asthma". The compound causes intestinal irritation due to its caustic nature. Lower doses may cause impaired appetite, sluggish reaction to stimuli and reduced alertness. Inhalation of benzyl alcohol may affect breathing (causing depression and paralysis of breathing and lower blood pressure. Inhalation of aerosols (mists, fumes), generated by the material during the course of normal handling, may be harmful. Acute effects from inhalation of high vapour concentrations may be chest and nasal irritation with coughing, sneezing, headache and even nausea.
Ingestion	Ingestion of alkaline corrosives may produce burns around the mouth, ulcerations and swellings of the mucous membranes, profuse saliva production, with an inability to speak or swallow. Both the oesophagus and stomach may experience burning pain; vomiting and diarrhoea may follow. Ingestion of amine epoxy-curing agents (hardeners) may cause severe abdominal pain, nausea, vomiting or diarrhoea. The vomitus may contain blood and mucous. Amines without benzene rings when swallowed are absorbed throughout the gut. Corrosive action may cause damage throughout the gastrointestinal tract. High oral doses of salicylates, such as aspirin, may cause a mild burning pain in the throat and stomach, causing vomiting. This is followed (within hours) by deep, rapid breathing, tiredness, nausea and further vomiting, thirst and diarrhoea. The material has **NOT** been classified by EC Directives or other classification systems as "harmful by ingestion". This is because of the lack of corroborating animal or human evidence. Swallowing large doses of benzyl alcohol may cause abdominal pain, nausea, vomiting and diarrhea. It may affect behaviour and/or the central nervous system, and cause headache, sleepiness, excitement, dizziness, inco-ordination, coma, convulsions and other symptoms of central nervous system depression. Central nervous system (CNS) depression may include general discomfort, symptoms of giddiness, headache, dizziness, nausea, anaesthetic effects, slowed reaction time, slurred speech and may progress to unconsciousness. Serious poisonings may result in respiratory depression and may be fatal. Accidental ingestion of the material may be harmful; animal experiments indicate that ingestion of less than 150 gram may be fatal or may produce serious damage to the health of the individual.
Skin Contact	Skin contact is not thought to have harmful health effects (as classified under EC Directives); the material may still produce health damage following entry through wounds, lesions or abrasions. Volatile amine vapours produce irritation and inflammation of the skin. Direct contact can cause burns. Amine epoxy-curing agents (hardeners) may produce primary skin irritation and sensitisation dermatitis in predisposed individuals. Cutaneous reactions include erythema, intolerable itching and severe facial swelling. Undiluted benzene-1,3-dimethanamine may be corrosive to the skin. Concentrated solution of the material produces severe reddening and irritation. Skin contact with alkaline corrosives may produce severe pain and burns; brownish stains may develop. The corroded area may be soft, gelatinous and necrotic; tissue destruction may be deep. Open cuts, abraded or irritated skin should not be exposed to this material Entry into the blood-stream, through, for example, cuts, abrasions or lesions, may produce systemic injury with harmful effects. Examine the skin prior to the use of the material and ensure that any external damage is suitably protected. Skin contact with the material may be harmful; systemic effects may result following absorption. There is some evidence to suggest that the material may cause moderate inflammation of the skin either following direct contact or after a delay of some time. Repeated exposure can cause contact dermatitis which is characterised by redness, swelling and blistering.
Eye	If applied to the eyes, this material causes severe eye damage. Direct eye contact with corrosive bases can cause pain and burns. There may be swelling, epithelium destruction, clouding of the cornea and inflammation of the iris. Vapours of volatile amines irritate the eyes, causing excessive secretion of tears, inflammation of the conjunctiva and slight swelling of the cornea, resulting in "halos" around lights. This effect is temporary, lasting only for a few hours.
Chronic	There has been concern that this material can cause cancer or mutations, but there is not enough data to make an assessment. Repeated or prolonged exposure to corrosives may result in the erosion of teeth, inflammatory and ulcerative changes in the mouth and necrosis (rarely) of the jaw. Bronchial irritation, with cough, and frequent attacks of bronchial pneumonia may ensue. Long-term exposure to respiratory irritants may result in airways disease, involving difficulty breathing and related whole-body problems. Toxic: danger of serious damage to health by prolonged exposure through inhalation, in contact with skin and if swallowed. This material can cause serious damage if one is exposed to it for long periods. It can be assumed that it contains a substance which can produce severe defects. Ample evidence from experiments exists that there is a suspicion this material directly reduces fertility. Substance accumulation, in the human body, may occur and may cause some concern following repeated or long-term occupational exposure. Chronic exposure to salicylates produce problems with metabolism, central nervous system disturbances, or kidney damage. Those with pre-existing damage to the eye, skin or kidney are especially at risk. Prolonged or repeated exposure to benzyl alcohol may cause allergic contact dermatitis (skin inflammation). Prolonged or repeated swallowing may affect behaviour and the central nervous system with symptoms similar to acute swallowing.

Retro-Coat Clear Part B	Laboratory (in vitro) and animal studies show, exposure to the material may result in a possible risk of irreversible effects, with the possibility of producing mutation.
BENZYL ALCOHOL	Unlike benzylic alcohols, the beta-hydroxyl group of the members of benzyl alkyl alcohols contributes to break down reactions but do not undergo phase II metabolic activation. Though structurally similar to cancer causing ethyl benzene, phenethyl alcohol is only of negligible concern due to limited similarity in their pattern of activity. For benzoates: Benzyl alcohol, benzoic acid and its sodium and potassium salt have a common metabolic and excretion pathway. All but benzyl alcohol are considered to be unharmful and of low acute toxicity. This is a member or analogue of a group of benzyl derivatives generally regarded as safe (GRAS), based partly on their self-limiting properties as flavouring substances in food. In humans and other animals, they are rapidly absorbed, broken down and excreted, with a wide safety margin. The aryl alkyl alcohol (AAA) fragrance ingredients have diverse chemical structures, with similar metabolic and toxicity profiles. The AAA fragrances demonstrate low acute and subchronic toxicity by skin contact and swallowing.
SALICYLIC ACID	For certain benzyl derivatives: The members of this group are rapidly absorbed through the gastrointestinal tract, metabolised primarily in the liver, and excreted primarily in the urine either unchanged or as conjugates of benzoic acid derivatives. At high dose levels, gut micro-organisms may act to produce minor amounts of breakdown products. A member or analogue of a group of hydroxy and alkoxy-substituted benzyl derivatives generally regarded as safe (GRAS) based in part on their self-limiting properties as flavouring substances in food; their rapid absorption. metabolic detoxification, and excretion in humans and other animals, their low level of flavour use, the wide margin of safety between the conservative estimates of intake

	and the no-observed-adverse effect levels determined from chronic and subchronic studies and the lack of significant genotoxic and mutagenic potential.
FORMALDEHYDE/ BENZENAMINE, HYDROGENATED	Amine adducts have much reduced volatility and are less irritating to the skin and eyes than amine hardeners. However commercial amine adducts may contain a percentage of unreacted amine and all unnecessary contact should be avoided. No significant acute toxicological data identified in literature search.
4,4'-METHYLENEBIS(CYCLOHEXYLAMINE)	The material may produce moderate eye irritation leading to inflammation. Repeated or prolonged exposure to irritants may produce conjunctivitis.
1,3-CYCLOHEXANEBIS(METHYLAMINE)	Gastrointestinal changes recorded. For 1,3-cyclohexanebis(methylamine) (CHBM): Animal testing shows that CHBMhas low to moderate acute toxicity by swallowing and moderate acute toxicity by skin contact. It is corrosive to the eyes and skin.
2,6-DI-TERT-BUTYL-4-METHYLPHENOL	* Degussa SDS Effects such as behavioral changes, reduction in body weight gain, and decrement in body weight have been observed after long-term administration of BHT to mice and rats. Toxic effects may be attributed more to BHT metabolites than to their parent compound, only a few studies have focused on their carcinogenicity and toxicity, and not only on that of BHT. The metabolite BHT-QM (syn: 2,6-di-tert-butyl-1,4-methylene-2,5-cyclohexadien-1-one, CAS RN: 2607-52-5) is a very reactive compound which is considered to play a significant role in hepatoxicity, pneumotoxicity, and skin tumor promotion in mice. BHT has been reported to exert prooxidant effects under certain conditions. Thus, when BHT was added in excess to a wheat seedling medium in aerobic conditions, an enhancement of the generation rate of superoxide anion was observed. Some authors have reported that at high aeration rate, BHT can react with molecular oxygen rather than with the reactive oxygen species present, yielding BHT-phenoxyl radical and superoxide anion. In addition, the phenolic radical itself may undergo redox recycling which can be a critical factor depending on the reductant involved However, it has to be noted that BHT-phenoxyl radical has been reported to be relatively stable. Furthermore, the potential reactivity of BHT-derived metabolites should be taken into account; some studies reported that not only BHT but also its metabolites, such as BHT-Q and BHT-QM, can act as prooxidant. As BHT undergoes several reactions during biotransformation, a large number of intermediate metabolites have been identified. However, their nature and concentration depend on the environmental conditions and on the animal species. Although the changes undergone by BHT during in vivo digestion processes have not been studied, after submission of a fluid deep-frying fat containing BHT and BHT-QM to an in vitro gastrointestinal digestion model, both these were detected in the digested samples. These results indicate that BHT and its toxic metabolite could remain bioaccessible for intestinal absorption. Studies concerning BHT metabolism have shown that, unlike other synthetic antioxidants, BHT is a potent inducer of the microsomal monooxygenase system and its major route of degradation is oxidation catalyzed by cytochrome P450. Studies have reported potential toxicity derived from the ingestion or administration of BHT. As for acute oral toxicity, although this is considered low in animals, it must be noted that 2 clinical cases were reported in patients who suffered acute neurotoxicity and gastritis after ingesting a high dose of BHT (4 and 80 g without medical prescription) to cure recurrent genital herpes. Regarding short-term subchronic toxicity studies, it has been reported that BHT causes dose-related increase in the incidence and severity of toxic nephrosis in mice, nephrotoxicity and pneumotoxicity in rats, and in chicken a marked congestion of the liver and kidney, as well as diffuse enlargement of the liver with rounded borders and rupture with hemorrhaging . It has to be noted that the EFSA Panel (2012) pointed out certain inconsistencies in the findings obtained from the short-term and subchronic toxicity studies. Several genotoxicity studies on BHT concluded that BHT does not represent a genotoxic risk, because most of the studies carried out to that date had shown BHT was not able to induce mutations or to damage deoxyribonucleic acid (DNA). Nevertheless, it must be mentioned that other studies reported contrary results. The effect of BHT and 7 of its metabolites on in vitro DNA cleavage was studied and the metabolites BHT-Q (syn: 2,6-di-tert-butyl-2,5-cyclohexadiene-1,4-dione, CAS RN: 719-22-2), BHT-CHO (syn: 3,5-di-tert-butyl-4-hydroxybenzaldehyde, CAS RN: 1620-98-0 and BHT-OOH (syn: 2,6-di-tert-butyl-4-methyl-4-hydroperoxy-2,5-cyclohexadien-1-one, CAS RN: 6485-57-0) were able to cleave DNA.. The Panel on Food Additives and Nutrient Sources Added to Food of the European Food Safety Authority (EFSA) recognized that these positive genotoxicity results may be due to the prooxidative chemistry of BHT, which gives rise to reactive metabolites. Some studies addressed the carcinogenicity and chronic toxicity of BHT and its metabolites in rodents with contradictory results. Thus, mice-fed dietary BHT for a year developed marked hyperplasia of the hepatic bile ducts with an associated subacute cholangitis Moreover, after 104 wk of administration of BHT, the formation of hepatocellular tumors in male mice was observed. Several studies have demonstrated the potential of BHT to act either as a tumor promotor or as a tumor suppressor, modulating the carcinogenicity of some well-known carcinogens. Barbara Nieva-Echevarria etal: Comprehensive reviews in Food Science and Food Safety, Vol 14, Dec 2014 http://onlinelibrary.wiley.com/doi/10.1111/1541-4337.12121/pdf for bridged alkyl phenols: **Acute toxicity:** Acute oral and dermal toxicity data are available for all but two of the substances in the group. The data show that acute toxicity of these substances is low. Data show that acute toxicity following oral and topical use of hindered phenols is low. They are not proven to cause mutations. The substance is classified by IARC as Group 3: **NOT** classifiable as to its carcinogenicity to humans. Evidence of carcinogenicity may be inadequate or limited in animal testing. **NOTE:** Substance has been shown to be mutagenic in at least one assay, or belongs to a family of chemicals producing damage or change to cellular DNA.
M-XYLENEDIAMINE	Allergic reactions involving the respiratory tract are usually due to interactions between IgE antibodies and allergens and occur rapidly. Allergic potential of the allergen and period of exposure often determine the severity of symptoms. Attention should be paid to atopic diathesis, characterised by increased susceptibility to nasal inflammation, asthma and eczema. Exogenous allergic alveolitis is induced essentially by allergen specific immune-complexes of the IgG type; cell-mediated reactions (T lymphocytes) may be involved. Such allergy is of the delayed type with onset up to four hours following exposure. For benzene-1,3-dimethanamine (m-xylene-alpha,alpha -diamine): Animal testing showed that benzene-1,3-methanamine caused tissue damage to the digestive and respiratory organs, if given by mouth or inhaled, respectively. The chemical is corrosive to animal skin, and may cause sensitization.
ISOPHORONE DIAMINE	Isophorone diamine is a strong skin irritant, corrosive with repeated application. Frequent occupational exposure may lead to the development of allergic skin inflammation. The material may be irritating to the eye, with prolonged contact causing inflammation. Repeated or prolonged exposure to irritants may produce conjunctivitis.
P-TERT-BUTYLPHENOL	These substances are intravenous anaesthetic agents. They have a very low level of acute toxicity; they may cause skin irritation. For p-tert-butylphenol: p-tert-butylphenol has low acute toxicity via all routes. It irritates the skin, eyes and airway.
Retro-Coat Clear Part B & SALICYLIC ACID & FORMALDEHYDE/ BENZENAMINE, HYDROGENATED & 4,4'-METHYLENEBIS(CYCLOHEXYLAMINE) & 1,3-CYCLOHEXANEBIS(METHYLAMINE) & 2,6-DI-TERT-BUTYL-4-METHYLPHENOL & M-XYLENEDIAMINE & ISOPHORONE DIAMINE & P-TERT-BUTYLPHENOL	Asthma-like symptoms may continue for months or even years after exposure to the material ends. This may be due to a non-allergic condition known as reactive airways dysfunction syndrome (RADS) which can occur after exposure to high levels of highly irritating compound.
Retro-Coat Clear Part B & BENZYL ALCOHOL	Adverse reactions to fragrances in perfumes and fragranced cosmetic products include allergic contact dermatitis, irritant contact dermatitis, sensitivity to light, immediate contact reactions, and pigmented contact dermatitis. Airborne and connubial contact dermatitis occurs. Fragrance allergens act as haptens, low molecular weight chemicals that cause an immune response only when attached to a

Continued...

	carrier protein. However, not all sensitizing fragrance chemicals are directly reactive, but require previous activation.
Retro-Coat Clear Part B & SALICYLIC ACID	The salicylates are well absorbed by mouth, and oral bioavailability is assumed to be total. In humans, absorption through skin is more limited.
Retro-Coat Clear Part B & 4,4'-METHYLENEBIS(CYCLOHEXYLAMINE) & M-XYLENEDIAMINE	Overexposure to most of these materials may cause adverse health effects. Many amine-based compounds can cause release of histamines, which, in turn, can trigger allergic and other physiological effects, including constriction of the bronchi or asthma and inflammation of the cavity of the nose. Whole-body symptoms include headache, nausea, faintness, anxiety, a decrease in blood pressure, rapid heartbeat, itching, reddening of the skin, urticaria (hives) and swelling of the face, which are usually transient. There are generally four routes of possible or potential exposure: inhalation, skin contact, eye contact, and swallowing. Inhalation: Inhaling vapours may result in moderate to severe irritation of the tissues of the nose and throat and can irritate the lungs.
BENZYL ALCOHOL & 4,4'-METHYLENEBIS(CYCLOHEXYLAMINE) & 1,3-CYCLOHEXANEBIS(METHYLAMINE) & M-XYLENEDIAMINE & ISOPHORONE DIAMINE	The following information refers to contact allergens as a group and may not be specific to this product. Contact allergies quickly manifest themselves as contact eczema, more rarely as urticaria or Quincke's oedema.
BENZYL ALCOHOL & SALICYLIC ACID & 4,4'-METHYLENEBIS(CYCLOHEXYLAMINE) & 2,6-DI-TERT-BUTYL-4-METHYLPHENOL & ISOPHORONE DIAMINE & P-TERT-BUTYLPHENOL	The material may cause skin irritation after prolonged or repeated exposure and may produce on contact skin redness, swelling, the production of vesicles, scaling and thickening of the skin.
SALICYLIC ACID & 1,3-CYCLOHEXANEBIS(METHYLAMINE) & M-XYLENEDIAMINE & P-TERT-BUTYLPHENOL	The material may produce severe irritation to the eye causing pronounced inflammation. Repeated or prolonged exposure to irritants may produce conjunctivitis.
4,4'-METHYLENEBIS(CYCLOHEXYLAMINE) & 1,3-CYCLOHEXANEBIS(METHYLAMINE) & ISOPHORONE DIAMINE	The material may produce respiratory tract irritation, and result in damage to the lung including reduced lung function.
1,3-CYCLOHEXANEBIS(METHYLAMINE) & M-XYLENEDIAMINE	The material may cause severe skin irritation after prolonged or repeated exposure and may produce on contact skin redness, swelling, the production of vesicles, scaling and thickening of the skin. Repeated exposures may produce severe ulceration.

For isophorone diamine:
Persistence/Biodegradability: 42% (DOC, OECD 303A) *8.0% (DOC, Die away test -9/69/EEC)*
* [Morton]
Environmental Fate:
Isophorone diamine has a melting point of 10 C, it mixes with water and has a vapour pressure of 0.02 hPa at 20 C. The measured log Kow is 0.99 (23 C). The pKa of approximately 10.4 characterises the substance as a moderate base.
For benzene-1,3-dimethanamine (m-xylene-alpha,alpha'- diamine)
Environmental fate:
The chemical has a log Pow value of 0.18 at 2 a vapour pressure 5 C, of 0.04 hPa at 25 C, and a water solubility of > 100 000 mg/L. Fugacity model Mackay level III calculations suggest that the majority of the chemical would distribute to soil if released to soil and/or air compartment(s), and water if released to aquatic compartment.
For benzyl alcohol: log Kow : 1.1Koc : <5Henry's atm m3 /mol: 3.91E-07BOD 5: 1.55-1.6,33-62%COD : 96%ThOD : 2.519BCF : 4
Bioaccumulation: Not significant
Anaerobic Effects: Significant degradation.
Effects on algae and plankton: Inhibits degradation of glucose
Degradation Biological: Significant processes
Abiotic: RxnOH*,no photochem
Ecotoxicity: Fish LC50 (48 h): fathead minnow 770 mg/l; (72 h): 480 mg/l; (96 h) 460 mg/l.
Prevent, by any means available, spillage from entering drains or water courses.
DO NOT discharge into sewer or waterways.

SECTION 13 Disposal considerations

Waste treatment methods

Product / Packaging disposal	▸ Containers may still present a chemical hazard/ danger when empty. ▸ Return to supplier for reuse/ recycling if possible. Legislation addressing waste disposal requirements may differ by country, state and/ or territory. Each user must refer to laws operating in their area. ▸ **DO NOT** allow wash water from cleaning or process equipment to enter drains. ▸ It may be necessary to collect all wash water for treatment before disposal. ▸ Recycle wherever possible. ▸ Consult manufacturer for recycling options or consult local or regional waste management authority for disposal if no suitable treatment or disposal facility can be identified.

SECTION 14 Transport information

Labels Required

	
Marine Pollutant	

Shipping container and transport vehicle placarding and labeling may vary from the below information. Products that are regulated for transport will be packaged and marked as Dangerous Goods in Excepted Quantities according to US DOT, IATA and IMDG regulations. In case of reshipment, it is the responsibility of the shipper to determine the appropriate labels and markings in accordance with applicable transport regulations.

Land transport (DOT)

UN number or ID number	2735
UN proper shipping name	Amines, liquid, corrosive, n.o.s. (contains isophorone diamine)
Transport hazard class(es)	Class: 8 Subsidiary risk: Not Applicable
Packing group	III

Land Science
a division of REGENESIS

Retro-Coat®
Vapor Intrusion Coating

TECHNICAL DATA SHEET

SCOPE

Product and Application
This specification describes the application of the Retro-Coat® System. The minimum thickness of the system is between 26-30 mils, including a 20 mil minimum application of Retro-Coat.

Key Benefits

- Designed specifically to mitigate vapor intrusion in existing structures
- Retro-Coat is a wearing surface, meaning no additional concrete protection is necessary
- No odor and fast cure time reduce building downtime
- Carpet, tile, linoleum or other floor coverings can be applied directly over Retro-Coat, if desired
- Retro-Coat can increase the performance of an existing active sub-slab depressurization system
- Retro-Coat can aid in the retiring of existing active systems
- Available and installed by Land Science Technologies certified contractors

Acceptable Manufacturers
Retro-Coat as manufactured by Land Science San Clemente, CA.

Applicator
Applicator must be a certified contractor of Land Science.

Performance Criteria
Retro-Coat as manufactured by Land Science San Clemente, CA.

Diffusion Coeffcient PCE: TCE:	(Columbia Labs) 7.6×10^{-14} m²/s 8.2×10^{-14} m²/s
Tensile Strength Minimum:	ASTM D-638 9,800 PSI
Tensile Elongation Minimum:	ASTM D-638 6%
Flexural Strength Minimum:	ASTM D-790 7,035 PSI
Hardness, Shore D Maximum:	ASTM D-2240 83
Gardner Impact Minimum:	ASTM D-2794 80 inch-pounds
Bond Strength Minimum:	(to quarry tile) 1,000 PSI
Vapor Transmission Rate Maximum:	ASTM E-96 0.07 perms
Water Absorption Maximum:	ASTM D-570 0.02% in 24 hours
60° Gloss Minimum:	 100

Materials
Retro-Coat “A” shall be a modified epoxy containing special flexibilizers and specially formulated resins for superior chemical resistance and enhanced resilience. No solvents are allowed.

Retro-Coat “B” shall be customized blend of hardeners specifically formulated to maximize chemical resistance.

© 2021 Land Science All Rights Reserved. Land Science and Retro-Coat are registered trademarks of REGENESIS Bioremediation Products, Inc. All other trademarks are property of their respective owners.

APPLICATION

Surface Preparation

All existing surfaces that will be covered with the systems specified herein should be mechanically ground, shot blasted or sand blasted to yield a minimum 60 grit surface texture. All loosely adhered coatings will be removed. Any grease and other contaminants found on the concrete must also be removed.

All open cracks 1/2" and greater should be v-notched to a 3/4" width by 1/2" depth and cleaned of any debris. Such cracks should be filled with Retro-Coat Gel and struck off flush with the surrounding surface.

Cut back and/or remove any expansion joint backing or filler strips to a minimum of 1 ½" deep. Insert disposable filler in the joints to prevent filling with the overlayment materials and to allow for accurate location of final saw cuts in the overlayment.

Material Application

Retro-Coat 2-Part Caulk

Apply Retro-Coat 2-Part Caulk around the base of all pipe penetrations making sure to fill any gap between the penetration and concrete slab

Apply Retro-Coat 2-Part Caulk to the joint created between horizontal and vertical transitions. The caulking material should be applied and pressed into the joint filling any gaps that might be present.

Retro-Coat PRIMER

Apply Retro-Coat PRIMER to all areas at a thickness of 6 mil and allow to dry tack free. In areas where the concrete surface is in need of slight repair or needs to be leveled, a slurry form of Retro-Coat PRIMER called Retro-Coat PRIMER-S can be applied with a flat squeegee. Retro-Coat PRIMER-S is self priming and does not need to be primed again.

Completed surface preparation consisting of shot blasting, Retro-Coat PREP, to fill joints and cracks and a 6 mil application of Retro-Coat PRIMER

APPLICATION

Retro-Coat
Mix Retro-Coat, Part A with a low-speed (<750 rpm) jiffy-style mixer for about 30 seconds, or until uniform in color, then mix in Retro-Coat Coating, Part B for another 30-60 seconds.

Dump contents onto floor in a ribbon pattern, squeegee, and then back roll at a coverage rate of 160 SF/gallon to achieve a film thickness of 10 mils.

Apply second coat 10 mil coat to achieve a total thickness of 20 mils. Repeat as necessary to achieve specified thickness.

If a flooring material will be placed over Retro-Coat after it is applied, or appearance is not a priority, (1) 20 mil coat can be applied.

Retro-Coat TOP WB
Retro-Coat TOP WB can be installed for aesthetic purposes to protect the Retro-Coat system from ambering or color fading due to fluorescent and UV light exposure.

Apply Retro-Coat TOP WB in two (2) 7-8 wet mil coats to achieve 7-8 dry mils.

Protection of Finished Work

Prohibit foot traffic on floor for 24 hours after laying (at 70°F). At 50°F, this time should be extended to 48 hours.

Rinse off any chemicals that may come in contact within 7 days of installation with the freshly laid floor immediately.

Application of Retro-Coat SEALANT to a 20 mil total thickness

Cleanup

Properly dispose of all unused and waste materials.

Tools can be washed in warm, soapy water when wet, but after drying, can only be cleaned by grinding or with a paint stripper.

Unused resin can be set off with proper amount of hardener and disposed of in regular trash bins.

QUALITY CONTROL

Warranty

Land Science warrants Retro-Coat to be free from defects for a period of one (1) year from the date when applied in accordance to Land Science's directions for application.

Bond failure, peeling or delamination due to water or moisture intrusion through the slab substrate will not be covered, nor will any defects to the Retro-Coat layer caused by osmotic vapor blistering.

Due to uncontrolled color tinting from each color batch, colors, textures, patterns, and shading may vary from job to job and throughout larger areas. Color and texture samples used by Land Science are approximate only and may vary from the completed project.

Any damage to the coating that is caused by movement of the underlying substrate (i.e., concrete, joint material or other such underlayment), such as concrete cracking, movement of concrete, and joints expanding, will not be covered by the warranty. Additionally, some tires may leave an amber colored tire tread mark impregnated into the top layer, this is not covered under the warranty.

Any repairs and/or corrections will be for the defective area only, unless deemed otherwise by Land Science. Due to the custom nature of Land Science coatings, any repairs and or corrections may not match the original work. Land Science will not re-install a brand new flooring system to the entire floor due to colors, gloss or sheen difference, texture difference and/or chips not matching.

Resinous coatings are odorous; we recommend turning off air handlers prior to installation. We hold no liability for these chemical odors.

THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, AND THE REMEDY PERMITTED HEREIN SHALL BE THE EXCLUSIVE REMEDY OF THE BUYER. SELLER'S LIABILITY SHALL BE LIMITED TO REPLACEMENT OF DEFECTIVE MATERIAL. IN NO EVENT SHALL SELLER BE LIABLE FOR SPECIAL, PUNITIVE, CONSEQUENTIAL OR INCIDENTAL DAMAGES. THIS PARAGRAPH IS NOT APPLICABLE IN CONSUMER TRANSACTION OR WHERE PROHIBITED BY LAW.

Quality Control

Installer shall use a notched squeegee to apply Retro-Coat to the specified mil thickness and calculations shall be done to determine if the correct amount of material has been applied. Retro-Coat contains 100% solids at the time of application; therefore no material shrinkage will occur during the curing process. One gallon will cover 80 square feet.

A wet mil film gauge can be used to spot check the Retro-Coat thickness to make certain the minimum 20 mil thickness has been applied, though some discretion should be used because high points or low points on the underlying surface can adversely affect the thickness measurements.

Floor Care

The standard smooth surface of Retro-Coat should be cleaned on a regular basis by damp mopping the floor with conventional commercial cleaners. It is important to first remove any grease or oils by a suitable cleaner, preferably a citrus based cleaner. Rinse with clear water to help eliminate film buildup and then allow to dry.

⚠ ***Never use abrasive powder cleaners like Ajax or Comet as they tend to scratch the floor.***

- Additional steps can also be taken to prolong the look and life of a seamless floor:
- Protect the floor during transference of heavy equipment
- Educate the drivers inside the building of the importance of avoiding “jack-rabbit” starts and stops, as well as keeping the metal forks lifted
- Regular cleaning should take place as to not allow the buildup of abrasive material, such as sand or dirt, on the coating
- Eliminate all metal wheels
- Change over to light-colored polyurethane wheels
- Do not slide heavy metal totes, drums or bins across the floor
- Immediately hose down chemical spills, especially on newly laid floors.

TNEMEC

ELASTO-GRIP® FC 151-1051

PRODUCT DATA SHEET

PRODUCT PROFILE

GENERIC DESCRIPTION Waterborne Modified Polyamine Epoxy

COMMON USAGE Penetrating, flexible and low-odor primer for sealing cementitious and other porous substrates. Also excellent as a tie-coat for specialized finishes over sound existing coatings.

COLORS Green

FINISH Matte

COATING SYSTEM

TOPCOATS Series 2H, 6, 30, L69, L69F, N69, N69F, V69, V69F, 84, 113, 114, 115, 156, 157, 158, 180, 181, 280, 1028, 1029

SURFACE PREPARATION

CRACKS Repair masonry as necessary with 152 tape. Refer to 152 product data sheet for additional details.

DRYWALL Sand joint compound smooth and feather edge.

WOOD Sand rough areas. Seal knots and pitch pockets. Fill cracks and nail holes after primer has cured.

PAINTED SURFACES Remove old paint not tightly bonded to the surface. A test patch is recommended to determine compatibility of 151 over unknown previously-applied coatings.

ALL SURFACES Must be clean, dry and free of oil, grease and other contaminants. Allow new concrete, plaster, stucco and masonry to cure for 14 days. Level protrusions and mortar spatter. Fill block with an appropriate masonry filler if a smoother appearance is desired.

TECHNICAL DATA

VOLUME SOLIDS 17.0 ± 2.0%

RECOMMENDED DFT 0.7 to 1.5 mils (18 to 38 microns) per coat (non-absorbent substrates).

CURING TIME

Temperature	To Touch	To Recoat
75°F (24°C) 50% Relative Humidity	1 1/2 hours	3 1/2 hours minimum 7 days maximum

If more than 7 days have elapsed after applying 151, apply a refresher coat before topcoating. Higher humidities and/or lower temperatures increase the cure time.

VOLATILE ORGANIC COMPOUNDS Unthinned: 1.46 lbs/gallon (175 grams/litre)

THEORETICAL COVERAGE 273 mil sq ft/gal (6.7 m²/L at 25 microns). See APPLICATION for coverage rates.

NUMBER OF COMPONENTS Two: Part A and Part B

PACKAGING Five-Gallon Kit: Consists of 4.0 gallons of Part A in a 5-gallon plastic pail and a full filled gallon can of Part B. When mixed, yields five gallons (18.9L).
One-Gallon Kit: Consists of a partially filled one-gallon can labeled Part A and a partially filled quart can labeled Part B. When mixed, yields one gallon (3.79L).

NET WEIGHT PER GALLON 8.58 ± 0.5 lbs (3.84 ± .11 kg) (mixed)

STORAGE TEMPERATURE Minimum 35°F (2°C) Maximum 110°F (43°C)

SHELF LIFE 24 months at recommended storage temperature.

FLASH POINT - SETA N/A

HEALTH & SAFETY Paint products contain chemical ingredients which are considered hazardous. Read container label warning and Material Safety Data Sheet for important health and safety information prior to the use of this product.
Keep out of the reach of children.

© August 25, 2009 by Tnemec Co., Inc.

Published technical data and instructions are subject to change without notice. The online catalog at www.tnemec.com should be referenced for the most current technical data and instructions or you may contact your Tnemec representative for current technical data and instructions.

ELASTO-GRIP® FC | 151-1051

APPLICATION

COVERAGE RATES One gallon will cover from 180 to 400 sq ft (16.7 to 37.2 m²). Highly porous or rough/irregular surface will reduce coverage. Application of coating below minimum or above maximum dry mil thickness recommended may adversely affect coating performance.

MIXING Stir contents of the can marked Part A. Add the contents of the can marked Part B to Part A while under agitation. Continue agitation until the two components are thoroughly mixed. Do not use mixed material beyond pot life limits. Unused material must be kept tightly closed at all times.

THINNING Not recommended.

POT LIFE At 77°F (25°C): 12 hours.

APPLICATION EQUIPMENT Airless Spray

Tip Orifice	Atomizing Pressure	Mat'l Hose ID	Manifold Filter
0.013"-0.019" (330-485 microns)	2500-3000 psi (172-207 bar)	1/4" or 3/8" (6.4 or 9.5 mm)	60 mesh (250 microns)

Use appropriate tip/atomizing pressure for equipment, applicator technique and weather conditions.
Roller: Use short synthetic nap rollers for smooth surfaces. Use long synthetic nap rollers for rough surfaces.
Brush: Soft nylon or synthetic bristles.

SURFACE TEMPERATURE Minimum 40°F (4°C) Maximum 120°F (49°C)
The surface should be dry and at least 5°F (3°C) above the dew point.

CLEANUP Flush and clean all equipment immediately after use with warm, soapy water. Flush spray equipment with a final rinse of ethanol or isopropyl alcohol.

WARRANTY & LIMITATION OF SELLER'S LIABILITY: Tnemec Company, Inc. warrants only that its coatings represented herein meet the formulation standards of Tnemec Company, Inc. THE WARRANTY DESCRIBED IN THE ABOVE PARAGRAPH SHALL BE IN LIEU OF ANY OTHER WARRANTY, EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. THERE ARE NO WARRANTIES THAT EXTEND BEYOND THE DESCRIPTION ON THE FACE HEREOF. The buyer's sole and exclusive remedy against Tnemec Company, Inc. shall be for replacement of the product in the event a defective condition of the product should be found to exist and the exclusive remedy shall not have failed its essential purpose as long as Tnemec is willing to provide comparable replacement product to the buyer. NO OTHER REMEDY (INCLUDING, BUT NOT LIMITED TO, INCIDENTAL OR CONSEQUENTIAL DAMAGES FOR LOST PROFITS, LOST SALES, INJURY TO PERSON OR PROPERTY, ENVIRONMENTAL INJURIES OR ANY OTHER INCIDENTAL OR CONSEQUENTIAL LOSS) SHALL BE AVAILABLE TO THE BUYER. Technical and application information herein is provided for the purpose of establishing a general profile of the coating and proper coating application procedures. Test performance results were obtained in a controlled environment and Tnemec Company makes no claim that these tests or any other tests, accurately represent all environments. As application, environmental and design factors can vary significantly, due care should be exercised in the selection and use of the coating.

2. HAZARDS IDENTIFICATION

Classification

OSHA Regulatory Status
This chemical is considered hazardous by the 2012 OSHA Hazard Communication Standard (29 CFR 1910.1200)

Serious eye damage/eye irritation	Category 2A
Skin sensitization	Category 1
Germ cell mutagenicity	Category 1B
Carcinogenicity	Category 1A
Reproductive Toxicity	Category 2
Specific target organ toxicity (repeated exposure)	Category 1

Label elements

EMERGENCY OVERVIEW

Danger

Hazard statements
Causes serious eye irritation
May cause an allergic skin reaction
May cause genetic defects
May cause cancer
Suspected of damaging fertility or the unborn child
Causes damage to organs through prolonged or repeated exposure

Appearance opaque **Physical state** liquid **Odor** Slight

Precautionary Statements
Prevention
Obtain special instructions before use
Do not handle until all safety precautions have been read and understood
Use personal protective equipment as required
Wash face, hands and any exposed skin thoroughly after handling
Contaminated work clothing should not be allowed out of the workplace
Wear protective gloves
Do not breathe dust/fume/gas/mist/vapors/spray
Do not eat, drink or smoke when using this product

Response
IF exposed or concerned: Get medical advice/attention
IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
If eye irritation persists: Get medical advice/attention
IF ON SKIN: Wash with plenty of soap and water
If skin irritation or rash occurs: Get medical advice/attention
Wash contaminated clothing before reuse

Storage
Store locked up
Keep away from children

Disposal
Dispose of contents/container to an approved waste disposal plant

Hazards not otherwise classified (HNOC)
Other information
Causes mild skin irritation
Toxic to aquatic life with long lasting effects
Cancer hazard. Contains crystalline silica which can cause cancer. (Risk of cancer depends on duration and level of exposure).
Respirable crystalline silica (quartz) can cause silicosis, a fibrosis (scarring) of the lungs
Contains ethylene glycol monobutyl ether which may cause blood damage based on animal data.
SEE SAFETY DATA SHEET
Acute Toxicity 30.11817 % of the mixture consists of ingredient(s) of unknown toxicity.

3. COMPOSITION/INFORMATION ON INGREDIENTS

Chemical name	CAS No	Weight-%
EPOXY RESIN	-	10 - <30%
PROPRIETARY SOLVENT	-	1 - <10%
DIETHYLENE GLYCOL MONOBUTYL ETHER ACETATE	124-17-4	1 - <10%
BENZYL ALCOHOL	100-51-6	1 - <10%

*The exact percentage (concentration) of composition has been withheld as a trade secret.

4. FIRST AID MEASURES

Description of first aid measures

General advice If symptoms persist, call a physician.

Eye contact Rinse thoroughly with plenty of water for at least 15 minutes. If symptoms persist, call a physician.

Skin contact Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Call a physician immediately.

Inhalation Remove to fresh air. Oxygen or artificial respiration if needed.

Ingestion If swallowed, do not induce vomiting. Get medical attention immediately.

Self-protection of the first aider Use personal protective equipment. Avoid contact with eyes, skin and clothing.

Most important symptoms and effects, both acute and delayed

Notes to physician Treat symptomatically.

5. FIRE-FIGHTING MEASURES

Suitable extinguishing media
Carbon dioxide. Foam. Dry chemical.

Unsuitable extinguishing media Do not use a solid water stream as it may scatter and spread fire.

Specific hazards arising from the chemical
Thermal decomposition can lead to release of irritating gases and vapours In the event of fire and/or explosion do not breathe fumes

Hazardous combustion products Hazardous combustion products may include: A complex mixture of airborne solid and liquid particulates and gases (smoke). Carbon monoxide. Unidentified organic and inorganic compounds. Carbon oxides. Hydrocarbons. Ammonia.

Protective equipment and precautions for firefighters
Use water spray to cool unopened containers. In the event of fire, wear self-contained breathing apparatus. Keep away from heat/sparks/open flames/hot surfaces. MAY CAUSE HEAT AND PRESSURE BUILD-UP IN CLOSED CONTAINERS.

6. ACCIDENTAL RELEASE MEASURES

Personal precautions, protective equipment and emergency procedures

Personal precautions Avoid contact with eyes, skin and clothing. Use personal protective equipment. Remove all sources of ignition.

Environmental Precautions

Environmental precautions Prevent further leakage or spillage if safe to do so. Do not flush into surface water or sanitary sewer system.

Methods and material for containment and cleaning up

Methods for containment Remove all sources of ignition. Spills may be collected with inert, absorbent material for proper disposal. Use non-sparking tools, protective gloves, goggles and clothing, adequate ventilation, avoid the breathing of vapors and use respiratory protective devices. Transfer absorbent material to suitable containers for proper disposal.

Methods for cleaning up If spilled, contain spilled material and remove with inert absorbent. Dispose of contaminated absorbent, container and unused contents in accordance with local, state and federal regulations.

7. HANDLING AND STORAGE

Precautions for safe handling

Handling Close container after each use. Avoid contact with eyes, skin and clothing. Do not eat, drink or smoke when using this product. If splashes are likely to occur, wear goggles. Wear protective gloves/clothing. Do not burn, or use a cutting torch on, the empty drum. When used in a mixture, read the labels and safety data sheets of all components. Wash thoroughly after handling.

Conditions for safe storage, including any incompatibilities

Storage Keep container tightly closed in a dry and well-ventilated place. Keep out of the reach of children.

Incompatible products Acids. Alkaline. Amines. Strong oxidizing agents.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Control parameters

Exposure guidelines .

Chemical name	ACGIH TLV	OSHA PEL	NIOSH IDLH
PROPRIETARY SOLVENT	TWA: 50 ppm STEL: 100 ppm	TWA: 100 ppm TWA: 360 mg/m^3 STEL: 150 ppm STEL: 540 mg/m^3	

Appropriate engineering controls

Engineering measures Sufficient ventilation, in volume and pattern, should be provided through both local and general exhaust to keep the air contaminant concentration below current applicable OSHA Permissible Exposure Limits (PEL) and ACGIH"s Threshold Limit Values (TLV). Appropriate ventilation should be employed to remove hazardous decomposition products formed during welding or flame cutting operations of surfaces coated with this product.

Individual protection measures, such as personal protective equipment

Eye/face protection Safety glasses with side-shields If splashes are likely to occur, wear face-shield.

Skin and body protection Wear impervious protective clothing, including boots, gloves, lab coat, apron or coveralls, as appropriate, to prevent skin contact.

Respiratory protection Use only with adequate ventilation. Do not breathe vapors, spray mist, or dust. Ensure fresh air entry during application and drying. If you experience eye watering, headache or dizziness or if air monitoring demonstrates vapor/mist or dust levels are above applicable limits, wear an appropriate, properly fitted respirator (NIOSH/MSHA approved) during and after application. Follow respirator manufacturer's directions for respirator use.

General hygiene considerations Handle in accordance with good industrial hygiene and safety practice.
Avoid breathing dust created by cutting, sanding, or grinding.

9. PHYSICAL AND CHEMICAL PROPERTIES

Information on basic physical and chemical properties

Physical state	liquid		
Appearance	opaque	**Odor**	Slight
Color	No information available	**Odor threshold**	No information available

Property	Values	Remarks
pH		No data available

Melting point / freezing point	No data available	No data available
Boiling point / boiling range	100 °C / 212.0 °F	
Flash point	No information available	
Evaporation rate		No data available
Flammability (solid, gas)	No data available	No information available
Flammability Limit in Air		No data available
Upper flammability limit	N/A	
Lower flammability limit	1.1	
Vapor pressure		No data available
Vapor density		No data available
Specific gravity	1.03383	g/cm3
Water solubility	Insoluble in cold water	
Solubility in other solvents		No data available
Partition coefficient: n-octanol/water		No data available
Autoignition temperature	No data available	No data available
Decomposition temperature		No data available
Kinematic viscosity		No data available
Dynamic viscosity	1000 centipoises	approx

Other Information

Density	8.62217 lbs/gal
Volatile organic compounds (VOC) content	1.50378 lbs/gal
Total volatiles weight percent	79.23 %
Total volatiles volume percent	82.26 %
Bulk density	No information available

10. STABILITY AND REACTIVITY

Reactivity
No data available

Chemical stability
Stable under recommended storage conditions.

Possibility of hazardous reactions
None under normal processing.

Conditions to avoid
Heat, flames and sparks.

Incompatible materials
Acids, Alkaline, Amines, Strong oxidizing agents

Hazardous decomposition products
Hazardous combustion products may include: A complex mixture of airborne solid and liquid particulates and gases (smoke). Carbon monoxide. Unidentified organic and inorganic compounds. Ammonia. Carbon oxides. Hydrocarbons.

11. TOXICOLOGICAL INFORMATION

Information on Likely Routes of Exposure

Inhalation	May cause central nervous system depression with nausea, headache, dizziness, vomiting, and incoordination.
Eye contact	Contact with eyes may cause irritation.
Skin contact	May cause irritation. May cause sensitization by skin contact.
Ingestion	Harmful if swallowed.

Chemical name	LD50 Oral	LD50 Dermal	LC50 Inhalation
PROPRIETARY SOLVENT	= 5000 mg/kg (Rat)	= 13 g/kg (Rabbit)	> 7559 ppm (Rat) 6 h
DIETHYLENE GLYCOL MONOBUTYL ETHER ACETATE 124-17-4	= 6500 mg/kg (Rat)	= 14500 mg/kg (Rabbit)	= 72500 mg/m³ (Rat) 4 h
BENZYL ALCOHOL 100-51-6	= 1230 mg/kg (Rat)	= 2 g/kg (Rabbit)	= 8.8 mg/L (Rat) 4 h

Information on toxicological effects

Symptoms Symptoms of overexposure may be headache, dizziness, tiredness, nausea and vomiting. Skin disorders.

Delayed and immediate effects as well as chronic effects from short and long-term exposure

Chronic Toxicity Cancer hazard. Contains crystalline silica which can cause cancer. (Risk of cancer depends on duration and level of exposure). Contains ethylene glycol monobutyl ether which may cause blood damage based on animal data. Skin sensitizer. Substances known to be mutagenic to man. Substances known to impair fertility.

Sensitization May cause sensitization of susceptible persons.

Mutagenicity May cause genetic defects.

Carcinogenicity The table below indicates whether each agency has listed any ingredient as a carcinogen.

Reproductive effects Suspected of damaging fertility or the unborn child.

STOT - single exposure No information available

STOT - repeated exposure Causes damage to organs through prolonged or repeated exposure

Target organ effects blood, Central nervous system, Central Vascular System (CVS), Eyes, hematopoietic system, kidney, liver, Lungs, respiratory system, Skin.

Aspiration hazard No information available.

Acute Toxicity 30.11817 % of the mixture consists of ingredient(s) of unknown toxicity.

12. ECOLOGICAL INFORMATION

Ecotoxicity

Toxic to aquatic life with long lasting effects

69.83527 % of the mixture consists of components(s) of unknown hazards to the aquatic environment

Chemical name	Toxicity to algae	Toxicity to fish	Toxicity to daphnia
PROPRIETARY SOLVENT		20.8: 96 h Pimephales promelas g/L LC50 static 4600 - 10000: 96 h Leuciscus idus mg/L LC50 static	23300: 48 h Daphnia magna mg/L EC50
DIETHYLENE GLYCOL MONOBUTYL ETHER ACETATE 124-17-4		50 - 70: 96 h Brachydanio rerio mg/L LC50 static 77: 96 h Pimephales promelas mg/L LC50 static	665: 48 h Daphnia magna mg/L LC50
BENZYL ALCOHOL 100-51-6	35: 3 h Anabaena variabilis mg/L EC50	460: 96 h Pimephales promelas mg/L LC50 static 10: 96 h Lepomis macrochirus mg/L LC50 static	23: 48 h water flea mg/L EC50

Persistence and degradability
No information available.

Bioaccumulation
No information available.

Mobility in Environmental Media

Chemical name	log Pow
PROPRIETARY SOLVENT	-0.437
DIETHYLENE GLYCOL MONOBUTYL ETHER ACETATE 124-17-4	1.77

BENZYL ALCOHOL 100-51-6	1.1

Other Adverse Effects No information available

13. DISPOSAL CONSIDERATIONS

Waste treatment methods

Disposal Methods Keep container tightly closed. If spilled, contain spilled material and remove with inert absorbent. Dispose of contaminated absorbent, container and unused contents in accordance with local, state and federal regulations.

Contaminated packaging Empty containers should be taken to an approved waste handling site for recycling or disposal.

14. TRANSPORT INFORMATION

DOT

Proper Shipping Name paint,water base freezable NOT REGULATED

Additional information Call TNEMEC Traffic Department - 816-474-3400 for additional information or other modes of Transportation.

The following chemical(s) are listed as HAP under the U.S. Clean Air Act, Section 12 (40 CFR 61):

Chemical name	**HAPS Data**
DIETHYLENE GLYCOL MONOBUTYL ETHER ACETATE	

SARA 313

Section 313 of Title III of the Superfund Amendments and Reauthorization Act of 1986 (SARA). This product contains a chemical or chemicals which are subject to the reporting requirements of the Act and and Title 40n of the Code of Federal Regulations, Part 372:

Chemical name	**SARA 313 - Threshold Values**
DIETHYLENE GLYCOL MONOBUTYL ETHER ACETATE - 124-17-4	1.0

SARA 311/312 Hazardous Categorization

Acute Health Hazard	Yes
Chronic Health Hazard	Yes
Fire Hazard	No
Sudden Release of Pressure Hazard	No
Reactive Hazard	No

California Prop. 65

None of the ingredients are listed with California Proposition 65.

Chemical name	California Prop. 65
AMORPHOUS SILICA - 7631-86-9	Carcinogen

California SCAQMD Rule 443

Contains Photochemically Reactive Solvent

State Right-to-Know

Safety Data Sheet

Issue Date 05-Mar-2018 **Revision Date** 05-Mar-2018 **Revision Number** 5

1. IDENTIFICATION

Product identifier

Product Code F151-1051B
Product Name ELASTO-GRIP FC GREEN CONVERTER

Other means of identification

Common Name SERIES 151-1051, PART B
Synonyms None

Recommended use of the chemical and restrictions on use

Recommended Use industrial paint.
Uses advised against Consumer use, For professional use only. Not for residential use.

Details of the supplier of the safety data sheet

Manufacturer Address
Tnemec Company, Inc. 6800 Corporate Drive, Kansas City, MO 64120-1372 816-474-3400

Distributor
Tnemec Company, Inc. 86 Boul, des Entreprises, Ste. 203, Boisbriand, Quebec Canada J7G 2T3

Emergency telephone number

Company Phone Number Tnemec Regulatory Dept: 816-474-3400
24 Hour Emergency Phone Number 800-535-5053 (Infotrac)

2. HAZARDS IDENTIFICATION

Classification

OSHA Regulatory Status
This chemical is considered hazardous by the 2012 OSHA Hazard Communication Standard (29 CFR 1910.1200)

Serious eye damage/eye irritation	Category 1

Label elements

EMERGENCY OVERVIEW

Danger

Hazard statements
Causes serious eye damage

Appearance green **Physical state** liquid **Odor** Slight

Precautionary Statements
Prevention

Wear protective gloves/protective clothing/eye protection/face protection

Response
Get medical advice/attention if you feel unwell
IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
Immediately call a POISON CENTER or doctor/physician

Storage
Keep away from children

Disposal
Dispose of contents/container to an approved waste disposal plant

Hazards not otherwise classified (HNOC)
Other information
Causes mild skin irritation
Harmful to aquatic life with long lasting effects
Acute Toxicity 14.11162 % of the mixture consists of ingredient(s) of unknown toxicity.

3. COMPOSITION/INFORMATION ON INGREDIENTS

Chemical name	CAS No	Weight-%
EPOXY POLYMER	155240-10-1	10 - <30%
DIETHYLENE GLYCOL MONOBUTYL ETHER ACETATE	124-17-4	1 - <10%

*The exact percentage (concentration) of composition has been withheld as a trade secret.

4. FIRST AID MEASURES

Description of first aid measures

General advice If symptoms persist, call a physician.

Eye contact Rinse thoroughly with plenty of water for at least 15 minutes. Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Call a physician immediately.

Skin contact Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes.

Inhalation Remove to fresh air. Oxygen or artificial respiration if needed.

Ingestion If swallowed, do not induce vomiting. Get medical attention immediately.

Self-protection of the first aider Use personal protective equipment. Avoid contact with eyes, skin and clothing.

Most important symptoms and effects, both acute and delayed

Notes to physician Treat symptomatically.

5. FIRE-FIGHTING MEASURES

Suitable extinguishing media
Carbon dioxide. Foam. Dry chemical.

Unsuitable extinguishing media Do not use a solid water stream as it may scatter and spread fire.

Specific hazards arising from the chemical
Thermal decomposition can lead to release of irritating gases and vapours In the event of fire and/or explosion do not breathe fumes

Hazardous combustion products Hazardous combustion products may include: A complex mixture of airborne solid and liquid particulates and gases (smoke). Carbon monoxide. Unidentified organic and inorganic compounds. Aldehydes. Carbon oxides. Hydrocarbons. Oxides of nitrogen.

Protective equipment and precautions for firefighters

Use water spray to cool unopened containers. In the event of fire, wear self-contained breathing apparatus. Keep away from heat/sparks/open flames/hot surfaces. MAY CAUSE HEAT AND PRESSURE BUILD-UP IN CLOSED CONTAINERS.

6. ACCIDENTAL RELEASE MEASURES

Personal precautions, protective equipment and emergency procedures

Personal precautions Avoid contact with eyes, skin and clothing. Use personal protective equipment. Remove all sources of ignition.

Environmental Precautions

Environmental precautions Prevent further leakage or spillage if safe to do so. Do not flush into surface water or sanitary sewer system.

Methods and material for containment and cleaning up

Methods for containment Remove all sources of ignition. Spills may be collected with inert, absorbent material for proper disposal. Use non-sparking tools, protective gloves, goggles and clothing, adequate ventilation, avoid the breathing of vapors and use respiratory protective devices. Transfer absorbent material to suitable containers for proper disposal.

Methods for cleaning up If spilled, contain spilled material and remove with inert absorbent. Dispose of contaminated absorbent, container and unused contents in accordance with local, state and federal regulations.

7. HANDLING AND STORAGE

Precautions for safe handling

Handling Close container after each use. Avoid contact with eyes, skin and clothing. Do not eat, drink or smoke when using this product. If splashes are likely to occur, wear goggles. Wear protective gloves/clothing. Do not burn, or use a cutting torch on, the empty drum. When used in a mixture, read the labels and safety data sheets of all components. Wash thoroughly after handling.

Conditions for safe storage, including any incompatibilities

Storage Prevent build-up of vapors by opening all windows and doors to achieve cross ventilation. Keep container tightly closed in a dry and well-ventilated place. Keep out of the reach of children.

Incompatible products Strong oxidizing agents. Acids. Alkalis. Cleaning solutions such as Chromerge and Aqua Regia.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Control parameters

Exposure guidelines .

Appropriate engineering controls

Engineering measures Sufficient ventilation, in volume and pattern, should be provided through both local and general exhaust to keep the air contaminant concentration below current applicable OSHA Permissible Exposure Limits (PEL) and ACGIH"s Threshold Limit Values (TLV).

Appropriate ventilation should be employed to remove hazardous decomposition products formed during welding or flame cutting operations of surfaces coated with this product.

Individual protection measures, such as personal protective equipment

Eye/face protection Use chemical resistant splash type goggles. If splashes are likely to occur, wear face-shield.

Skin and body protection Wear impervious protective clothing, including boots, gloves, lab coat, apron or coveralls, as appropriate, to prevent skin contact.

Respiratory protection Use only with adequate ventilation. Do not breathe vapors, spray mist, or dust. Ensure fresh air entry during application and drying. If you experience eye watering, headache or dizziness or if air monitoring demonstrates vapor/mist or dust levels are above applicable limits, wear an appropriate, properly fitted respirator (NIOSH/MSHA approved) during and after application. Follow respirator manufacturer's directions for respirator use.

General hygiene considerations Handle in accordance with good industrial hygiene and safety practice. Avoid breathing dust created by cutting, sanding, or grinding.

9. PHYSICAL AND CHEMICAL PROPERTIES

Information on basic physical and chemical properties

Physical state	liquid		
Appearance	green	**Odor**	Slight
Color	No information available	**Odor threshold**	No information available

Property	**Values**	**Remarks**
pH		No data available
Melting point / freezing point	No data available	No data available
Boiling point / boiling range	100 °C / 212.0 °F	
Flash point	No information available	
Evaporation rate		No data available
Flammability (solid, gas)	No data available	No information available
Flammability Limit in Air		No data available
Upper flammability limit	N/A	
Lower flammability limit	.8	
Vapor pressure		No data available
Vapor density		No data available
Specific gravity	1.00928	g/cm3
Water solubility	Insoluble in cold water	
Solubility in other solvents		No data available
Partition coefficient: n-octanol/water		No data available
Autoignition temperature	No data available	No data available
Decomposition temperature		No data available
Kinematic viscosity		No data available
Dynamic viscosity		No data available

Other Information

Density	8.41737 lbs/gal
Volatile organic compounds (VOC) content	1.18846 lbs/gal
Total volatiles weight percent	85.14 %
Total volatiles volume percent	86.04 %
Bulk density	No information available

10. STABILITY AND REACTIVITY

Reactivity

No data available

Chemical stability
Stable under recommended storage conditions.

Possibility of hazardous reactions
None under normal processing.

Conditions to avoid
Heat, flames and sparks. Epoxy constituents.

Incompatible materials
Strong oxidizing agents, Acids, Alkalis, Cleaning solutions such as Chromerge and Aqua Regia

Hazardous decomposition products
Hazardous combustion products may include: A complex mixture of airborne solid and liquid particulates and gases (smoke). Carbon monoxide. Unidentified organic and inorganic compounds. Oxides of nitrogen. Aldehydes. Carbon oxides. Hydrocarbons.

11. TOXICOLOGICAL INFORMATION

Information on Likely Routes of Exposure

Inhalation May cause central nervous system depression with nausea, headache, dizziness, vomiting, and incoordination.

Eye contact Causes serious eye damage.

Skin contact Irritating to skin.

Ingestion Harmful if swallowed.

Chemical name	LD50 Oral	LD50 Dermal	LC50 Inhalation
DIETHYLENE GLYCOL MONOBUTYL ETHER ACETATE 124-17-4	= 6500 mg/kg (Rat)	= 14500 mg/kg (Rabbit)	= 72500 mg/m³ (Rat) 4 h

Information on toxicological effects

Symptoms Symptoms of overexposure may be headache, dizziness, tiredness, nausea and vomiting. Skin disorders. Irritating to eyes and skin.

Delayed and immediate effects as well as chronic effects from short and long-term exposure

Chronic Toxicity NOTICE: Reports have associated repeated and prolonged occupational overexposure to solvents with permanent brain and nervous system damage. Intentional misuse by deliberately concentrating and inhaling the contents may be harmful or fatal.
Sensitization No information available.
Mutagenicity No information available.
Carcinogenicity There are no known carcinogenic chemicals in this product.
Reproductive effects No information available.
STOT - single exposure No information available
STOT - repeated exposure No information available
Aspiration hazard No information available.

Acute Toxicity 14.11162 % of the mixture consists of ingredient(s) of unknown toxicity.

12. ECOLOGICAL INFORMATION

Ecotoxicity

Harmful to aquatic life with long lasting effects

14.29022 % of the mixture consists of components(s) of unknown hazards to the aquatic environment

Chemical name	Toxicity to algae	Toxicity to fish	Toxicity to daphnia
DIETHYLENE GLYCOL MONOBUTYL ETHER ACETATE 124-17-4		50 - 70: 96 h Brachydanio rerio mg/L LC50 static 77: 96 h Pimephales promelas mg/L LC50 static	665: 48 h Daphnia magna mg/L LC50

Persistence and degradability
No information available.

Bioaccumulation
No information available.

Mobility in Environmental Media

Chemical name	log Pow
DIETHYLENE GLYCOL MONOBUTYL ETHER ACETATE 124-17-4	1.77

Other Adverse Effects No information available

13. DISPOSAL CONSIDERATIONS

Waste treatment methods

Disposal Methods Keep container tightly closed. If spilled, contain spilled material and remove with inert absorbent. Dispose of contaminated absorbent, container and unused contents in accordance with local, state and federal regulations.

Contaminated packaging Empty containers should be taken to an approved waste handling site for recycling or disposal.
